

2020 ANNUAL REPORT

---

**UNITED STATES  
SECURITIES AND EXCHANGE COMMISSION  
Washington, D.C. 20549**

**FORM 10-K**

(Mark One)

**ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934**

For the fiscal year ended June 30, 2020

or

**TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934**

For the transition period from \_\_\_\_\_ to \_\_\_\_\_

Commission file number 001-33301

**ACCURAY INCORPORATED**

(Exact name of registrant as specified in its charter)

DELAWARE  
(State or Other Jurisdiction of  
Incorporation or organization)

20-8370041  
(I.R.S. Employer  
Identification No.)

**1310 Chesapeake Terrace  
Sunnyvale, California 94089**

(Address of Principal Executive Offices) (Zip Code)

Registrants' telephone number, including area code: **(408) 716-4600**

Securities registered pursuant to section 12(b) of the Act:

Title of Each Class	Trading Symbol(s)	Name of Each Exchange on Which Registered
Common Stock, \$0.001 par value per share	ARAY	The NASDAQ Stock Market LLC

Securities registered pursuant to section 12(g) of the Act: **None**

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes  No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes  No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes  No

Indicate by check mark whether the registrant has submitted electronically every Interactive Data File required to be submitted pursuant to Rule 405 of Regulation S-T (§ 232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit such files). Yes  No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company, or an emerging growth company. See definitions of "large accelerated filer," "accelerated filer," "smaller reporting company" and "emerging growth company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer  Accelerated filer  Non-accelerated filer  Smaller reporting company   
Emerging growth company

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act.

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes  No

The aggregate market value of the registrant's common stock held by non-affiliates of the registrant based on the last sale price for such stock on December 31, 2019, the last business day of the registrant's most recently completed second fiscal quarter was: \$176,031,250. Shares of the registrant's common stock held by each executive officer, director and 5% stockholder have been excluded in that such persons may be deemed to be affiliates. This determination of affiliate status is not necessarily a conclusive determination for other purposes.

As of August 16, 2020, the number of outstanding shares of the registrant's common stock, \$0.001 par value, was 91,198,408.

**DOCUMENTS INCORPORATED BY REFERENCE**

Portions of the Proxy Statement for the Registrant's 2020 Annual Meeting of stockholders (the "2020 Proxy Statement") are incorporated by reference in Part III of this Form 10-K.

## SPECIAL NOTE REGARDING FORWARD-LOOKING STATEMENTS

*This Annual Report on Form 10-K includes forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended, including, but not limited to, statements regarding expectations and beliefs regarding the effect of the COVID-19 pandemic and the related responses of governments and private industry on our operations and financial results as well as the markets and industry in general; future revenues and expenses; our sales, distribution and marketing efforts; reimbursement rates and its effects on our business; regulatory requirements, including our compliance with applicable regulations; future orders; the radiation therapy market; expectations regarding the economic impact of cancer; our strategy; our products and offerings, including their benefits and anticipated benefits to patients and physicians; the factors that contribute to the long-term success of our products; our suppliers and manufacturing facilities; our intellectual property rights; the expected impact of changes in laws and regulations, including regulatory and tax laws; our expectations regarding litigation matters; our expectations regarding future capital requirements; our earnings or other financial results; our expectations regarding new products and features; our expectations regarding our joint venture with CNNC High Energy Equipment (Tianjin) Co., Ltd (the “JV”); and other statements using words such as “anticipates,” “believes,” “can,” “could,” “estimates,” “expects,” “forecasts,” “intends,” “may,” “plans,” “projects,” “seek,” “should,” “will” and “would,” and words of similar import and the negatives thereof. Accuray Incorporated (“we,” “our,” or the “Company”) has based these forward-looking statements largely on our current expectations and projections about future events and financial trends affecting the financial condition of our business. Such forward-looking statements are subject to risks, uncertainties and other important factors that could cause actual results and the timing of certain events to differ materially from future results expressed or implied by such forward-looking statements. Forward-looking statements should not be read as a guarantee of future performance or results, and will not necessarily be accurate indications of the times at, or by, which such performance or results will be achieved. Factors that could contribute to such differences include, but are not limited to, those discussed under “Risk Factors” in Part I, Item 1A of this report. These forward-looking statements speak only as of the date of this Annual Report on Form 10-K and are subject to business and economic risks. We undertake no obligation to update or revise any forward-looking statements to reflect any event or circumstance that arises after the date of this report except as required by applicable law.*

## PART I

### Item 1. BUSINESS

#### The Company

Accuray Incorporated is a radiation oncology company that develops, manufactures, sells and supports precise, innovative treatment solutions which set the standard of radiation therapy care with the aim of helping patients live longer, better lives. Our innovative technologies, the CyberKnife and TomoTherapy Systems, including the Radixact System, our next generation TomoTherapy platform, are designed to deliver advanced treatments, including stereotactic radiosurgery (SRS), stereotactic body radiation therapy (SBRT), intensity modulated radiation therapy (IMRT), image guided radiation therapy (IGRT), and adaptive radiation therapy. The CyberKnife Systems, the TomoTherapy Systems, and the Radixact Systems have complementary clinical applications, enabling customers to deliver the most precise treatments while minimizing side effects and maximizing patient comfort and care. Each of these systems serves patient populations treated by the same medical specialty, radiation oncology, with advanced capabilities.

The CyberKnife Systems are the only fully robotic systems that deliver SRS and SBRT, and are used to treat multiple types of cancer and tumors throughout the body. The CyberKnife Systems automatically track, detect and correct for tumor and patient movement in real-time during the procedure, enabling delivery of precise, high dose radiation with sub-millimeter accuracy while patients breathe normally, without manual user intervention. Treatment with the CyberKnife Systems requires no anesthesia, and treatment sessions are done on an outpatient basis. In addition, the CyberKnife Systems are designed to minimize many of the risks and complications associated with other treatment options. The CyberKnife Systems are the only robotic radiosurgery systems available today which deliver such high precision treatments for intra- and extra-cranial disease sites throughout the body, including prostate, lung, brain, spine, liver, pancreas and kidney. The latest generation CyberKnife M6 Series System is available with the InCise Multileaf Collimator (InCise MLC), the world's first multileaf collimator (MLC) to be available on a robotic platform. With the addition of the InCise MLC, clinicians can deliver the same precise radiosurgery treatments they have come to expect with the CyberKnife Systems, while significantly reducing treatment times, for a wider range of tumor types, including larger and different kinds of tumors than were previously treated. Additional options include the fixed collimator, and the Iris Variable Aperture Collimator, giving clinicians a range of collimation forms to choose from to meet the needs of their patients.

The TomoTherapy Systems, including the Radixact System, the next-generation TomoTherapy platform, represent the only radiation therapy platform specifically designed for image-guided intensity-modulated radiation therapy (IG-IMRT). Based on a ring gantry CT scanner platform, the TomoTherapy System provides continuous delivery of radiation from 360 degrees around the patient, or delivery from clinician-specified direct beam angles. These unique features, combined with daily 3D image guidance, enable physicians to deliver dose distributions which precisely conform to the shape of the patient's tumor while minimizing dose to normal, healthy tissue, resulting in fewer side effects for patients. The TomoTherapy Systems are capable of treating all standard radiation therapy indications including breast, prostate, lung, and head and neck cancers, in addition to complex treatments such as total marrow irradiation, while minimizing side effects; and enable efficient daily imaging to ensure the accuracy of the patient position before each treatment delivery. The TomoTherapy and Radixact Systems include the following options: TomoHelical, TomoDirect, and TomoEdge dynamic jaws. The system configuration depends on the options chosen by the customer. When we refer to "TomoTherapy Systems" in this Annual Report on Form 10-K, we mean that term to include the Radixact System as well, unless otherwise noted. The Radixact System is available with Synchrony, a collection of unique hardware and software technologies, which adapt treatment delivery for tumors that move as a result of bodily processes, including respiration and digestion, as well as patient movement. Synchrony is the only technology that uses artificial intelligence, through image guidance, to automatically adapt and synchronize the radiation beam to the position of the tumor if and when it moves during treatment. Synchrony helps to maximize treatment effectiveness and minimize dose to surrounding healthy tissue because it accounts for the current and changing conditions of the patient during treatment delivery.

We have also introduced the Onrad System, a lower priced, direct delivery system, in China. The Onrad System is designed to meet the ease of use and throughput demands of a market segment in which we have not previously competed.

We were incorporated in California in 1990 and commenced operations in 1992. We reincorporated in Delaware in 2007. Our principal offices are located at 1310 Chesapeake Terrace, Sunnyvale, CA 94089, and our telephone number is (408) 716-4600.

In March 2020, the World Health Organization declared the outbreak of a novel strain of coronavirus, SARS-CoV-2, which causes coronavirus disease 2019 (“COVID-19”) pandemic. The COVID-19 pandemic is having widespread, rapidly evolving, and unpredictable impacts on global society, economies, financial markets, and business practices. Federal and state governments have implemented measures in an effort to contain the virus, including social distancing, travel restrictions, border closures, limitations on public gatherings, work from home, supply chain logistical changes, and closure of non-essential businesses. To protect the health and well-being of our employees, suppliers, and customers, we have made substantial modifications to employee travel and suspended non-essential work travel, implemented remote work arrangements as employees are advised to work from home, and cancelled or shifted most of our conferences and other marketing events to virtual through fiscal year 2021. The COVID-19 pandemic has impacted and may continue to impact our business operations, including our employees, customers and partners, and there is substantial uncertainty in the nature and degree of its continued effects over time. Refer to Management’s Discussion and Analysis of Financial Condition and Results of Operations (Part II, Item 7 of this Form 10-K) for further discussion regarding the impact of the COVID-19 pandemic on our fiscal year 2020 financial results.

## **Market Overview**

Despite significant improvements in cancer diagnosis and treatment, cancer rates continue to increase globally and are a leading cause of death. According to the World Health Organization, cancer is the second leading cause of death globally and was responsible for an estimated 9.6 million deaths in 2018. Globally, about 1 in 6 deaths is due to cancer, and the economic impact of cancer is significant and is expected to increase. The total annual economic cost of cancer in 2010 was estimated at approximately \$1.6 trillion.

Cancers can be broadly divided into two groups: solid tumor cancers, which are characterized by the growth of malignant tumors within the body in areas such as the brain, lung, liver, breast or prostate, and hematological, or blood-borne cancers, such as leukemia. The most common causes of cancer deaths are cancers of lung, liver, colorectal, stomach and breast. The American Cancer Society (the “ACS”) estimates that solid tumor cancers will account for approximately 1.6 million, or approximately 92% of new cancer cases diagnosed annually.

Traditional methods for the treatment of solid tumor cancers include chemotherapy, surgery and radiation therapy. The most common type of radiation therapy is external beam radiation therapy, in which patients are treated with high-energy radiation generated by medical equipment external to the patient. The global radiotherapy equipment and software market has three main segments: Linear Accelerators (Linacs), Treatment Planning Systems, and Radiation Therapy Simulators. Market research has shown that the global market for radiation oncology systems is expected to exceed \$5.0 billion in 2020 and have a 4% annual growth rate, which means that the market is anticipated to exceed \$6.0 billion by 2025. Approximately 60% of cancer patients worldwide will undergo some form of radiation therapy during the course of their treatment. While radiation therapy is widely available in the United States and Western Europe, many developing countries currently do not have a sufficient number of linacs to adequately treat their domestic cancer patient populations. We believe increasing demand for advanced medical treatments in many international markets and growth in cancer incidences worldwide will continue to drive demand for advanced linacs in the coming years.

Emerging markets are especially underequipped with external beam radiation therapy systems. According to a publication called the Lancet Oncology Commission in 2015, radiation therapy is required in more than half of the newly diagnosed cancer patients. There was an estimated shortage of over 15,000 linacs globally in 2015, expected to grow to over 21,000 by 2035. This gap is most pronounced in low and middle income countries, where only 10% of patients have access to radiotherapy. China alone is estimated to have a shortfall of over 5,000 systems because of increasing cancer incidence and an aging population that is estimated to more than double by 2040.

## **Radiation Therapy**

Radiation therapy is used to treat a wide range of cancer and tumor types by using high-energy radiation to destroy cancer cells and shrink or control the growth of tumors. Radiation therapy works by exposing clusters of cancer cells, or tumors, to a dose of high energy radiation sufficient to cause cell death and prevent cells from multiplying. During external beam radiation therapy, the clinician's goal is to target radiation delivery to the tumor as precisely as possible in order to maximize the radiation dose delivered to cancerous tissue and minimize the exposure of healthy tissue. Recent advances in radiation therapy technologies have allowed clinicians to further improve the ability to target the radiation dose more precisely at cancer cells while minimizing the exposure of healthy tissue. These advances include the following:

***Intensity modulated radiation therapy.*** Intensity modulated radiation therapy involves varying, or modulating, the radiation beam intensity across the treatment area. This technique aims to conform the high dose region of the radiation beam more closely with the shape of the tumor, enabling the delivery of higher doses of radiation to tumors with a reduced impact on surrounding healthy tissue.

***Image guided radiation therapy.*** IGRT involves delivering radiation guided by images of the treatment area taken shortly before and/or during treatment using CT scan, x-ray, ultrasound or other imaging technologies. By combining imaging with radiation treatment, clinicians can adjust the patient's position relative to the radiation source prior to each treatment to target the tumor more precisely.

***Radiosurgery and Stereotactic Body Radiation Therapy.*** Radiosurgery is a form of radiation therapy that uses precisely targeted radiation to destroy tumors. Radiosurgery is non-invasive; there is no cutting involved. It is commonly used by neurosurgeons to treat conditions within the brain and spine. SBRT is a treatment that uses precisely targeted radiation, like radiosurgery, to destroy tumors located outside the brain and spine. Radiosurgery and SBRT typically involve the delivery of a single high dose radiation treatment or a few fractionated radiation treatments (usually up to five) to ablate (destroy) by this therapy. To achieve the accuracy and precision required for both radiosurgery and SBRT, image guidance during treatment, the ability to adjust the aim of the beam in real-time to compensate for tumor motion and a wide range of beam angles, are critical for treatment.

***Adaptive radiation therapy.*** Adaptive radiation therapy involves adjusting a patient's radiation therapy plan during or between fractions to account for changes in the patient's anatomy, the amount and location of the radiation received by the patient, and the size, shape and location of the tumor. While there is no widely accepted definition of adaptive radiation therapy, it has been characterized to include as little as an adjustment to the physical position of the patient relative to the radiation source prior to treatment, as occurs during IGRT, rather than an adjustment to the treatment plan. Our approach is based on the belief that adaptive radiation therapy requires monitoring and adjustments to the treatment plan facilitated by both the regular acquisition of updated quantitative images showing the location, size, shape and density of the tumor, and verification of the radiation dose received by the patient throughout the entire course of treatment.

***Hypofractionation.*** Hypofractionation involves the delivery of higher doses of radiation in fewer fractions than are used in conventional radiation therapy. Higher doses of radiation have been shown to provide greater local control of the tumor. The advent of innovative technological features in radiation therapy treatment planning and delivery has enabled clinicians to maximize the radiation dose administered to tumors in the patient, improving local tumor control and, in some cases, improving patient survival rates. Additional benefits of hypofractionation include minimal side effects, fewer treatments and greater scheduling convenience for the patient. Hypofractionation is often used to treat small targets throughout the body, especially when located near critical structures, including the brain, head and neck, spine, lung and prostate. It is also being used more frequently in clinical applications where the radiobiology is appropriate for fewer fractions of higher doses, including the prostate and breast.

Despite advances in radiation therapy techniques, most commercially available radiation therapy systems from other manufacturers still present significant limitations that restrict clinicians' ability to provide the most precise treatment possible. These limitations include:

- **Limited versatility and precision.** The C-arm configuration of traditional radiation therapy systems has a limited range and speed of motion because of its size and mechanical structure. C-arm linac architecture is limited to delivering radiation in a single plane (coplanar) thus limiting its radiation delivery capability for complex and advanced cases. Additionally, most previously existing MLCs, which modulate or shape the radiation beams, have mechanical limitations that reduce their beam-shaping ability and the speed at which they operate. These design elements limit the motion and dynamic range of IMRT intensities capable of being delivered by traditional radiation therapy systems and often make it challenging to achieve the precision needed to maximize dose to the tumor while avoiding damage to surrounding healthy tissue and minimizing side effects. These limited treatment angles reduce the ability to deliver precisely targeted radiation that minimizes exposure to healthy tissue. Such imprecision may prevent clinicians from treating tumors near sensitive anatomic structures, such as the eye or the spinal cord, or from re-treating patients in an area of the body that was previously exposed to radiation and may be unable to tolerate additional exposure.
- **Limited ability to provide frequent, quantitative images.** Precise radiation therapy requires frequent images that accurately depict the size, shape and location of the tumor. Many traditional radiation therapy systems use imaging technologies that are not generally used on a daily basis to generate a quantitative assessment of the patient's and/or target volume's position due to concerns about the additional radiation exposure. In addition, traditional radiation therapy systems measure the amount of radiation emitted by the device based on the system's performance specifications. This calculation does not provide the clinician with data regarding the amount of radiation that was received by the patient or what tissue within the patient's body received any particular amount of radiation. Since it is common for internal organs to shift and for the size of the tumor to change during the course of treatment, failure to obtain updated images and adapt the patient and/or plan throughout the course of treatment may result in a portion, or potentially all, of the radiation dose missing the tumor and instead being absorbed by healthy tissue.
- **Failure to integrate multiple functions.** The basic architecture for traditional radiation therapy systems pre-dates many recent advances that enable integrated imaging, treatment planning, dose verification or quality assurance capabilities necessary for more advanced treatment protocols. Some conventional systems have been subsequently adapted to include certain elements of this functionality by incorporating modular add-on devices to legacy linac designs. These separate modular components can provide imaging, treatment planning, quality assurance procedures or post-treatment analysis functionality. However, this add-on architectural approach can have safety, accuracy, and workflow implications because of the manual methods used for checking proper system operation.

## Development of Radiosurgery

Advanced radiation therapy systems designed to deliver radiosurgery or stereotactic body radiation therapy differ from traditional radiation therapy systems in that they are designed to deliver a very high cumulative dose of radiation, in a single or a small number of treatments precisely targeted at the tumor rather than at a region that consists of the tumor plus healthy tissue that surrounds the tumor area. The more accurate delivery of radiation allows higher doses to be delivered, increasing the probability of tumor cell death and better local control. In addition, radiosurgery can be administered to patients who have inoperable or surgically complex tumors, or who may prefer a clinically effective, non-surgical treatment option.

## Our Strategy

Our goal is to develop equipment and technology that enable physicians to deliver precise, customized, leading-edge treatments that help cancer patients live longer, better lives. We endeavor to achieve this goal by expanding the clinical options for healthcare providers, helping them offer the best radiation treatment for each patient and by providing patients with treatment tailored to their specific needs. Our vision is a future where the fear, pain and suffering of cancer are a thing of the past. We believe our current technologies and our future innovations can help to achieve this. Some of the key elements of our strategy include the following:

***Increase physician adoption and patient awareness to drive utilization.*** We are continually working to increase adoption and awareness of our systems and demonstrate their advantages over more traditional treatment methods. We hold and sponsor symposia and educational meetings and support clinical studies to demonstrate the clinical benefits of our systems. We regularly meet with clinicians to educate them on the expanded versatility that our systems offer in comparison to more traditional radiation therapy products or surgery. We are continuously expanding our digital and social presence to reach and educate a broader audience of physicians and patients. To support awareness of all our product offerings, we assist our customers with increasing patient awareness in their communities by providing them tools to develop marketing and educational campaigns.

***Continue to expand the radiosurgery market.*** The CyberKnife System is a robotic radiosurgery system capable of treating tumors throughout the body. There are now over 1,700 peer reviewed publications supporting use of the CyberKnife System in the treatment of various cancer and tumor types. Radiosurgery is a commonly used procedure among neurosurgeons who require the high level of precision found with surgery yet want to offer their brain tumor patients a non-invasive option. With more than two decades of clinical evidence, the CyberKnife System offers distinct advantages in the treatment of diseases in the head, base of the skull, and spine. These areas of the body require extremely accurate treatment because of the proximity of the tumors to critical structures that may impact a person's ability to perform basic functions and to think, see, hear and walk

***Continue to innovate through clinical development and collaboration.*** The clinical success of our products is largely the result of the collaborative partnerships we have developed over the last decade with clinicians, researchers and patients. We proactively seek out and rely on constructive feedback from system users to learn what is needed to enhance the technology. As a result of this collaborative process, we continually refine and upgrade our systems, thereby improving our competitive position in the radiation therapy and radiosurgery markets. Upgrades to our systems are designed to address customer needs in the areas of improving the ease of use and accuracy of treatment, decreasing treatment times, and improving utilization for specific types of tumors.

***Expand sales in international markets.*** We intend to continue to increase our sales and distribution capabilities outside of the United States to take advantage of the large international opportunity for our products. Outside of the United States, we currently have regional offices in Morges, Switzerland, Hong Kong, China, Shanghai, China and Tokyo, Japan and direct sales staff in most countries in Western Europe, Japan, India and Canada. Combined with distributors in Eastern Europe, Russia, the Middle East, the Asia Pacific region and Latin America, our sales and distribution channels cover more than 92 countries. However, many of these countries are not highly developed at this time and therefore sales opportunities may be limited. We intend to increase our international revenue by focused additions of direct sales personnel in targeted areas to further penetrate our most promising international markets, and additional distributors strategic partnerships, or joint ventures where opportune.

***Strategic partnerships and joint ventures.*** We intend to pursue strategic partnerships and joint ventures we believe will allow us to complement our growth strategy, increase sales in our current markets and expand into adjacent markets, broaden our technology and intellectual property and strengthen our relationships with our customers. In fiscal 2016 we signed an agreement with RaySearch Laboratories AB, which will continue to lead to the integration of treatment planning support for the TomoTherapy and CyberKnife Systems in the RayStation treatment planning system (TPS). In fiscal 2017, we signed an agreement with Photo Diagnostic Systems, Incorporated to enhance image quality of our TomoTherapy System through an enhanced tomographic reconstruction software. In fiscal 2019, our wholly-owned subsidiary, Accuray Asia Limited ("Accuray Asia"), entered into an agreement with CNNC high Energy Equipment (Tianjin) Co., Ltd. (the "CIRC Subsidiary), a wholly-owned subsidiary of China Isotope & Radiation Corporation, to form a joint venture, CNNC Accuray (TianJin) Medical Technology Co. Ltd. (the "JV"), to manufacture and sell radiation oncology systems in China.

## **Our Products**

Our suite of products includes the CyberKnife Systems and the TomoTherapy Systems, including the Radixact System, the next generation TomoTherapy platform. We also offer our Onrad Treatment Delivery System, a configuration of the TomoTherapy System designed specifically to meet the needs of the market in China. In addition, our portfolio includes comprehensive software solutions to enable and enhance the precise and efficient radiotherapy treatment with our advanced delivery systems.

## ***The CyberKnife Systems***

Our principal radiosurgery products are the CyberKnife Systems, a robotic full-body radiosurgery system designed to treat tumors anywhere in the body non-invasively, which include the CyberKnife M6 Series with configuration options of fixed collimators plus the Iris Variable Aperture Collimator (FI), fixed collimators plus the InCise MLC (FM) and fixed collimators plus the Iris Variable Aperture Collimator plus the InCise MLC (FIM).

Using continual image guidance technology and computer controlled robotic mobility, the CyberKnife Systems are designed to deliver precise radiation from a wide array of beam angles and automatically track, detect and correct for tumor and patient movement in real-time throughout the treatment. This design is intended to enable the CyberKnife Systems to deliver high-dose radiation with precision, which minimizes damage to surrounding healthy tissue and eliminates the need for invasive head or body immobilization frames. Our patented image-guidance technology correlates low dose, real-time treatment X-rays with images previously taken with a CT scan of the tumor and surrounding tissue to direct each beam of radiation with increased precision versus treatments without this real-time feedback. This, in turn, enables delivery of a highly conformal, non-isocentric dose of radiation to the tumor, with minimal radiation delivered to surrounding healthy tissue. With its autonomous ability to track, detect and correct for even the slightest tumor and patient movement throughout the entire treatment, the CyberKnife System is intended to provide clinicians with an effective and accurate treatment.

Our configurations of CyberKnife Systems include the following:

***The CyberKnife M6 Series with configurations of FI, FM and FIM.*** The M6 Series is able to be sold in most major markets globally. It is used with either of the following options: an Iris collimator or a multileaf collimator. With the InCise MLC, larger tumors previously thought untreatable with radiosurgery and SBRT can be treated more efficiently with greater accuracy and sparing healthy tissue than previous configurations. The InCise MLC and IMRT planning tools enable expansion of indications that can be treated with a CyberKnife to include many IMRT indications. The CyberKnife M6 Series includes disease-specific tracking and treatment delivery solutions for brain, spine, lung and prostate tumors, treatment speed improvements, more options to configure the treatment room, expanded number of nodes leading to more coverage and sparing of healthy tissue.

***The CyberKnife S7 Series with configurations of FI+, FM and FIM.*** The S7 Series can be sold in most major markets globally. It is used with either of the following options: an Iris collimator (I) or a multileaf collimator (M). With the InCise MLC, larger tumors previously thought untreatable with radiosurgery and SBRT are able to be treated efficiently and with unrivaled accuracy and tissue sparing. The InCise MLC and IMRT planning tools enable expansion of indications that can be treated with a CyberKnife System to include many IMRT indications. The CyberKnife S7 Series includes disease specific tracking and treatment delivery solutions for brain, spine, lung and prostate tumors, treatment speed improvements, more options to configure the treatment room, expanded number of nodes leading to more coverage and sparing of healthy tissue.

We believe the CyberKnife Systems offer clinicians and patients the following benefits:

***The only truly robotic system in the market.*** Combining the benefits of continual image guidance and non-isocentric, non-coplanar treatment delivery, the CyberKnife Systems precisely contour radiation delivery to spare healthy tissue while maintaining sub-millimeter accuracy and precision even for targets that move during treatment. The CyberKnife Systems are the clinical solution to choose when accuracy, flexibility, speed, efficiency and patient comfort are essential.

***Treatment of inoperable or surgically complex tumors.*** The CyberKnife Systems may be used to target tumors that cannot be easily treated with traditional surgical techniques because of their location, number, size, shape or proximity to vital tissues or organs, or because of the age or health of the patient. The CyberKnife Systems' intelligent robotics enable the precise targeting of a tumor, while at the same time minimizing damage to surrounding healthy tissue.

***Treatment of tumors throughout the body.*** The CyberKnife Systems have been cleared by the FDA to provide treatment planning and image-guided radiosurgery treatment for tumors anywhere in the body where radiation treatment is indicated. By comparison, traditional frame-based radiosurgery systems are generally limited to treating brain tumors and use cobalt 60 radioactive material, which decays over time and is difficult to replace. The CyberKnife Systems are being used for the treatment of primary and metastatic tumors outside the brain, including tumors on or near the spine and in the lung, liver, prostate, kidney and pancreas in addition to tumors in the brain, with the same sub-millimeter accuracy in every disease site.

***Real-time tracking of tumor movement.*** The CyberKnife Systems are designed to enable the treatment of tumors that change position because of respiration, or tumor or patient movement during treatment. The CyberKnife Systems offer the following features which enhance image guided robotic radiation surgery: Synchrony Respiratory Tracking System, Xsight Lung Tracking System, Xsight Spine Tracking System, InTempo Adaptive Imaging System and Lung Optimized Treatment.

***Significant patient benefits.*** The CyberKnife Systems maximize patient comfort. Patients may be treated with the CyberKnife Systems on an outpatient basis without anesthesia and without the risks and complications inherent in traditional surgery. Patients do not require substantial pre-treatment preparation, and typically there is little to no recovery time or hospital stay associated with CyberKnife Systems' treatments. In addition, the CyberKnife Systems eliminate the need for an invasive rigid frame to be screwed into the patient's skull or affixed to other parts of the body, or for trained breath holding or gating instruments.

***Additional revenue generation through increased patient volumes.*** We believe clinical use of the CyberKnife Systems allows our customers to effectively treat patients where extreme precision and ability to account for motion are important, and patients who otherwise would not have been treated with radiation or who may not have been good candidates for surgery.

***Upgradeable modular design.*** The CyberKnife Systems have a modular design, which facilitates the implementation of upgrades that often do not require our customers to purchase an entirely new system to gain the benefits of new features. We continue to work to develop and offer new clinical capabilities enhancing ease of use, reducing treatment times, improving accuracy and improving patient access. The main components and options of the CyberKnife Systems include: the compact X-band linear accelerator; robotic manipulator, the real-time image-guidance system with continuous target tracking and correction; X-ray sources; image detectors. Key features of these components include:

***Robotic manipulator arm.*** The robotic manipulator arm, with six-degrees-of-freedom range of movement, is designed to move around the patient to position the linac and direct the radiation with an extremely high level of precision and repeatability. The manipulator arm provides what we believe to be a unique method of positioning the linac to deliver doses of radiation from nearly any direction and position, without the limitations inherent in gantry-based systems, creating a non-isocentric composite dose pattern with a high level of conformance to the shape of each treated tumor. This flexibility enhances the ability to diversify beam trajectories and beam entrance and exit points, helping to minimize risks of radiation damage to healthy cells near the tumor. Furthermore, the rapid response time of the manipulator arm allows tracking of tumors that move with respiration.

***Real-time image-guidance system with continuous target tracking and correction.*** Without the need for clinician intervention or treatment interruption, the CyberKnife Systems' real-time image-guided robotics are designed to enable continuous monitoring and correction for patient and tumor movements throughout each treatment as it is being delivered.

***X-ray sources.*** The low-energy X-ray sources generate the X-ray images that help determine the location of bony or other anatomic landmarks, or implanted fiducials, which are used for tracking throughout the entire treatment.

***Image detectors.*** The image detectors capture high-resolution anatomical images throughout the treatment. These live images are continually compared to the patient's CT scan to determine real-time patient positioning. Based on this information, the robotic manipulator automatically corrects for detected movements.

In addition to the main components listed above, we also offer the following components and options: Synchrony Respiratory Tracking System; Xsight Spine Tracking System; Xsight Lung Tracking System; Lung Optimized Treatment; RoboCouch Patient Positioning System; Xchange Robotic Collimator Changer; InTempo Adaptive Imaging System; Iris Variable Aperture Collimator; and the InCise MLC. Key features of some of these components are as follows:

***Synchrony Respiratory Tracking System.*** The CyberKnife Systems' proprietary motion tracking system, the Synchrony Respiratory Tracking System, is the first and only technology to continuously synchronize beam delivery to the motion of the tumor in real time, enabling the delivery of highly conformal radiation beams while reducing

healthy tissue exposure. It is used to continuously track tumors that move with respiration as beams are synchronized in real-time to tumor position while adapting to changes in breathing patterns. The Synchrony system provides what we believe is unsurpassed clinical accuracy of approximately 1.5 millimeters for tumors that move with respiration without the need for implanted fiducials. It makes it possible and practical for clinicians to deliver radiation dose with sub-millimeter precision, even for tumors that move with respiration.

***Xsight Tracking System.*** The Xsight Spine and Lung Tacking Systems allow for tracking of tumors without the need for implanted markers in the spine and the lung.

***Lung Optimized Treatment.*** An integrated suite of tools that provides a complete fiducial-free clinical solution for lung cancer patients and optimizes non-invasive lung SBRT treatments.

***InTempo Adaptive Imaging System.*** The InTempo System is designed to optimize imaging frequency during prostate treatments and uses time-based image guidance to assist with tracking and correcting non-predictable intrafraction target motion.

***Iris Variable Aperture Collimator.*** The Iris Variable Aperture Collimator enables delivery of beams in 12 unique sizes with a single collimator, which significantly reduces treatment times and the total radiation dose delivered to the patient.

***InCise Multileaf Collimator.*** The InCise MLC is designed specifically for the CyberKnife M6 Series. It delivers the same precise SRS and SBRT treatments clinicians expect from the CyberKnife Systems, while significantly reducing treatment times. With the InCise MLC, the CyberKnife M6 Series can be used to treat larger and irregular tumors more efficiently.

### ***TomoTherapy Systems, including the Radixact System, our next generation TomoTherapy platform***

The TomoTherapy Systems include the Radixact System, the next-generation TomoTherapy platform, which includes configuration options of X5, X7 and X9, and the TomoTherapy H Series, with configuration options of TomoH, TomoHD, and TomoHDA. The Radixact System has been cleared in most major markets globally. These systems consist of fully integrated and versatile radiation therapy systems used by healthcare professionals in the treatment of a wide range of cancer types. We believe the TomoTherapy Systems offer clinicians and patients the following benefits:

***Versatile treatment capabilities.*** The TomoTherapy Systems' ring gantry platform enables precise and efficient treatments with a high degree of dose conformity. The high-speed binary MLC, is integrated with the linac and consists of 64 individual low leakage tungsten leaves that move across the beam to either block or allow the passage of radiation, effectively modulating and shaping the beam as it is emitted. The combination of the ring gantry and the high-speed MLC enable treatment to be delivered continuously in a 360-degree helical pattern around the patient's body (which we refer to as TomoHelical). Additionally, the TomoDirect feature provides the TomoTherapy System's added versatility to provide high quality, fixed angle beams for those cases suited to simple tangential beam radiation delivery. All TomoTherapy Systems enable an operator to provide non-isocentric 3D conformal radiotherapy image-guided IMRT, or stereotactic treatments within a typical cylindrical volume of 40 centimeters in diameter and up to 135 centimeters in length. This expansive treatment field allows single or multiple tumors, located anywhere in body, to be treated in a single session. The TomoTherapy System's versatility, efficiency and precision offer clinicians an extensive range of effective treatment possibilities.

***Real-time tracking of tumor movement.*** Synchrony®, a collection of unique hardware and software technologies enables personalized real-time adaptive delivery of radiation treatment to targets while they are in motion by synchronizing the treatment delivery beam position to the target location precisely and accurately during the delivery of a treatment fraction. Synchrony can be used on the Radixact System to adapt treatment delivery for tumors that move as a result of bodily processes, including respiration and digestion, as well as patient movement. Synchrony is the only technology that uses artificial intelligence, through image guidance, to automatically adapt and synchronize the radiation beam to the position of the tumor if and when it moves during treatment. The beams of radiation are delivered continuously throughout the treatment session as the patient behaves naturally. Synchrony treatments are truly personalized, as delivery is adapted to the individual's unique movements throughout treatment

delivery. If movement changes during treatment, delivery is adapted for that unique change. The Synchrony system makes it possible and practical for clinicians to deliver radiation dose with sub millimeter precision, even for tumors that move. Synchrony helps to maximize treatment effectiveness and minimize dose to surrounding healthy tissue because it accounts for the current and changing conditions of the patient during treatment delivery.

***Daily, quantitative imaging for better identification of tumors, dose verification and treatment planning.*** The Radixact System offers integrated quantitative CT imaging capabilities, which depict the density of tumors and healthy tissue more accurately than traditional radiation therapy systems. We have recently launched our CTrue IR (Iterative Reconstruction) imaging technology, which uses a low-intensity, fan beam CT to collect quantitative images prior to each treatment. These images allow lung tissue, fat, muscle and bone to be clearly distinguished. In addition, because of the low radiation dose involved, the clinician can collect daily, quantitative images, which can be used to monitor changes in the patient's internal anatomy and quickly adapt the plan to those changes if deemed clinically necessary. We believe daily, quantitative, low dose images are essential to enabling optimal patient treatment, helping to ensure that original clinical objectives are achieved, from the first fraction to the last.

***Integrated treatment system for precise radiation delivery.*** We believe the integration of our CT imaging technology, treatment planning and helical delivery mode of radiation beams enables highly accurate and precise radiation therapy. Our planning software allows clinicians to establish the contours of a tumor and any normal radio-sensitive structures in close proximity to the treatment beam. The TomoTherapy Systems use an intelligent dose optimization algorithm to ensure the radiation beam conforms to the patient's tumor and minimizes exposure to surrounding healthy tissue structures, providing a highly-targeted and effective dose distribution. These features significantly benefit patients by increasing the radiation delivered to cancerous tissues while avoiding damage to nearby healthy tissues, thus also minimizing side effects.

***Efficient clinical workflow for Image Guided Radiation Therapy, or IGRT, and adaptive radiation therapy.*** The TomoTherapy Systems integrate into a single system all of the key elements for radiation therapy, including treatment planning, CT image-guided patient positioning, treatment delivery, quality assurance and adaptive planning. The imaging and treatment planning capabilities of many traditional systems are more modular or require cumbersome add-ons or separate treatment planning systems that result in clinicians taking more steps between scanning, planning and treatment of patients. Conversely, the integrated CTrue IR imaging and treatment features of the Radixact Systems allow clinicians to scan, plan and treat cancer patients efficiently. Treatment plans as well as daily images can be easily accessed remotely, enabling clinical teams to collaboratively work together, regardless of location, ensuring high quality plan development and delivery.

***Low barriers to installation and implementation.*** All external beam radiation systems must be housed in rooms which have special radiation shielding to capture any radiation not absorbed by the patient. The TomoTherapy Systems' size and self-contained design allow customers to retrofit them into existing treatment rooms previously used for legacy radiation therapy systems and avoid, or reduce, the significant construction costs that can be associated with building new, larger treatment rooms, which are often required of other radiation therapy systems. With both imaging and radiation delivery capabilities integrated on a ring gantry, the TomoTherapy Systems require less space than other linac systems, which use large moving arms to position the linac or incorporate adjacent imaging equipment used for treatment planning. In addition, because the TomoTherapy Systems have an integrated radiation beam stop, which shields radiation that passes through the patient, they require less radiation shielding in treatment room walls as compared to traditional systems. We also preassemble, test and commission each TomoTherapy System at our manufacturing facility, and ship the system almost fully assembled. This process typically allows radiation "beam on" within four days after delivery and first patient treatments to begin within 14 to 28 days after delivery.

***Platform for further technological advancements in adaptive radiation therapy.*** We believe the TomoTherapy Systems are uniquely positioned to enable truly adaptive radiation therapy because of their unique ability to provide daily, quantitative images, high speed delivery of radiation from fixed beam angles or helically from 360 degrees around the body and real-time verification of the dose received by the patient. We believe the combination of these design features and our integrated treatment planning and optimization software will allow us to continue to enhance the TomoTherapy Systems' adaptive capabilities to enable clinicians to routinely and easily adjust a patient's treatment as needed, thereby remaining true to the intent of the original treatment plan.

In addition to the functionality listed above, the TomoTherapy Systems may be enhanced with the following product options: TomoDirect Mode and TomoEdge Delivery. Key capabilities of these options are as follow:

***TomoDirect Mode.*** TomoDirect is standard on the TomoTherapy HDA model and Radixact X7 and X9 models. The TomoDirect mode is a discrete angle, non-rotational delivery mode for the TomoTherapy Systems that allows the user to create a treatment plan that defines target-specific gantry angles. Treatment delivery is quickly completed for each beam angle. The TomoDirect mode enables users to plan and treat routine cases with greater efficiency, while achieving the quality of TomoTherapy’s unique beamlet-based delivery.

***TomoEdge Delivery.*** TomoEdge is standard on the TomoTherapy HDA model and Radixact X7 and X9 models. By dynamically varying the width of the collimator jaws during treatment delivery, dose to normal healthy tissues immediately adjacent to the tumor is reduced, contributing to the minimization of radiation side effects. Additionally, overall irradiation time is shortened because the jaws opening can effectively tailor to the size of the tumor, enabling more efficient dose coverage. The resulting gains in treatment quality and speed expand the TomoTherapy Systems clinical and market reach within the conventional and stereotactic radiotherapy spaces.

### ***Our Software Solutions***

Our Accuray Precision Treatment Planning and iDMS Data Management Systems provide fully integrated treatment planning and data management systems for use with all compatible Accuray delivery systems.

***Accuray Precision Treatment Planning.*** With a streamlined and intuitive Windows-based interface, Accuray Precision Treatment Planning System enables clinicians to efficiently generate high quality radiation therapy treatment plans for all case types. It is a complete planning solution, including multi-modality image fusion with proprietary deformable image registration algorithm, comprehensive suite of contouring tools, AutoSegmentation auto-contouring options for head and neck, brain, and prostate, side-by-side treatment plan comparison, plan summation and evaluation. It supports treatment plan creation for all case types with TomoHelical, TomoDirect IMRT and 3D CRT planning mode on both Radixact and TomoTherapy Systems enabled with iDMS Data Management Systems. It also supports planning for all case types on CyberKnife Systems, including Frameless Intracranial Radiosurgery, Fiducial-Free Lung Tracking with Dynamic Motion Compensation, SBRT, for the spine, abdomen and pelvis, as well as other forms of SRT and IMRT. It provides fast and accurate dose computation engines for both Accuray treatment systems, including Monte Carlo dose calculation for the CyberKnife InCise multi-leaf collimator and VoLO Technology for Radixact and TomoTherapy Systems. The VoLO solution features high-speed parallel processing for both dose calculation and optimization, based on Graphics Processing Unit (GPU) technology that empowers clinicians to create highly customized treatment plans in less time, with greater flexibility to work interactively and in real time to efficiently develop the best IMRT treatment plans for even the most complex cases.

The Accuray Precision Treatment Planning System can be further enhanced with optional advanced capabilities below:

***PreciseART Adaptive Radiation Therapy Option.*** The PreciseART Radiation Therapy Option extends adaptive radiotherapy possibilities, delivering an entirely new level of system integration and workflow automation for Radixact Treatment Systems and other TomoTherapy Systems compatible with iDMS. The PreciseART Option enables clinicians to monitor patient treatment and efficiently adapt plans, helping clinics of all sizes deliver more precise treatments to more patients. It offers automated processing of daily imaging to enable clinicians to monitor all patients and set protocol-specific action levels to flag cases for review and possible plan adaptation. Its streamlined re-planning capabilities leverage full integration of treatment delivery, planning and database systems to allow clinicians to efficiently generate new treatment plans based on previous plan data. It also maintains the integrity of original treatment plans to ensure tumor coverage, preserve Organ-At-Risk doses and reduce toxicity. We believe our PreciseART software is the only practically usable adaptive therapy solution available to the mainstream radiation therapy market.

**PreciseRTX Retreatment Option.** The PreciseRTX Retreatment Option from Accuray, developed in partnership with MIM Software, makes retreatment planning more efficient and effective. The option helps to accelerate and enhance the process of creating new treatment plans for patients who have received previous irradiation. The workflow includes importation of patient dose data, from either Accuray or non-Accuray planning systems, automatic deformation of original plan contours onto a new treatment planning CT, automatic deformation of previously delivered dose onto a new planning CT, generation of the re-treatment plan based on the information from existing plan and summation of the original and new treatment plans to review the total dose.

**Accuray iDMS Data Management System.** Accuray iDMS creates a centralized platform for storing and managing all patient and treatment plan data. Designed to integrate with a wide range of technologies and systems, iDMS enables users and applications to securely and seamlessly access the data they need to drive efficient, informed, effective treatment. Information for patients to-be-treated or previously treated on any iDMS-compatible Accuray treatment delivery system will be maintained as a single treatment record, providing the flexibility to treat patients on any available Accuray treatment delivery system compatible with iDMS. It can manage users and privileges to control patient data access. It supports the Storage Vault option which can safely maintain years of encrypted patient data. It also offers customizable report generation of patient, plan and treatment system with Report Administration Application. In addition, the Accuray iDMS enables connectivity between Accuray Systems with other systems in radiation oncology departments, encompassing the entire radiotherapy workflow. iDMS offers several key capabilities:

**OIS Connect Option.** The OIS Connect software option is a DICOM standard-based solution that provides the ability to interface all iDMS-enabled Accuray treatment systems to a compatible Oncology Information System (OIS). This integration with electronic medical record generates a comprehensive export of the radiotherapy treatment history delivered using Accuray treatment systems.

**Tomo Quality Assurance (TQA) package.** The TQA application offers trending and reporting of many system and dosimetric parameters that allow physicians to monitor the performance of their TomoTherapy Systems.

**Delivery Analysis.** Delivery Analysis is a software option for TomoTherapy Systems that enables easy pre-treatment patient QA and also offers an innovative capability to monitor doses throughout the patient treatment using detector signals to ensure that the patient is receiving the expected dose from treatment to treatment. The product option provides both high level analytics for summary display as well as detailed analysis capability.

## **Sales and Marketing**

In the United States, we primarily market to customers directly through our sales organization, and we also market to customers through sales agents and Integrated Delivery Networks (IDNs). Outside the United States, we market to customers directly and through distributors. We have sales and service offices in Europe, Japan, China, and other countries in Asia, Latin America, and throughout the world.

In direct sales markets, we employ a combination of territory sales managers, training specialists and marketing managers. Territory sales managers and product specialists are responsible for selling the systems to hospitals and stand-alone treatment facilities. Our marketing managers help market our current products and work with our engineering group to identify and develop upgrades and enhancements for our suite of products. Our training specialists train radiation oncologists, surgeons, physicists, dosimetrists and radiation therapists.

We market our products to radiation oncologists, neurosurgeons, general surgeons, oncology specialists and other referring physicians in hospitals and stand-alone treatment facilities. We intend to continue to increase our focus on marketing and education efforts to surgical specialists and oncologists responsible for treating tumors throughout the body, and are also working closely with hospital administrators to demonstrate the economic benefits of our offering. Our marketing activities also include efforts to inform and educate cancer patients about the benefits of the CyberKnife and TomoTherapy Systems.

Under our standard distribution agreement, we generally appoint a distributor for a specific country. We typically also retain the right to distribute the CyberKnife and TomoTherapy Systems in such territories, though we remain bound by certain agreements entered into by TomoTherapy prior to our acquisition that did not retain such rights in certain jurisdictions. In most territories, our distributors generally provide the full range of service and sales capabilities, although we may provide installation and service support for certain distributors.

In China, the JV has begun selling our products, much like a distributor. In the long term, we anticipate that the JV will manufacture and sell a locally branded “Made in China” radiotherapy device in the Class B license category, which would replace our current offering in that category. We believe this strategy will allow us to best maximize both near and longer-term opportunities in China.

## **Manufacturing**

We purchase major components for each of our products from outside suppliers, including the robotic manipulator, treatment couches, gantry, magnetrons and computers. We closely monitor supplier quality, delivery performance and conformance to product specifications, and we also expect suppliers to contribute to our efforts to improve our manufacturing cost and quality.

Some of the components are obtained from single-source suppliers. These components include the gantry, couch, magnetron and solid state modulator for the TomoTherapy Systems and the robot, couch, and magnetron for the CyberKnife Systems. In most cases, if a supplier was unable to deliver these components, we believe we would be able to find other sources for these components subject to any regulatory qualifications, if required. In the event of a disruption in any of these suppliers’ ability to deliver a component, we would need to secure a replacement supplier. Additionally, any disruption or interruption of the supply of key subsystems could result in increased costs and delays in deliveries of our treatment systems, which could adversely affect our reputation and results of operations. To help mitigate these risks, we negotiate long-term supply contracts or submit long-term orders and forecasts to our single-source suppliers with the goal that our demand can be satisfied and any capacity problem can be mitigated.

Currently, we manufacture our CyberKnife and TomoTherapy Systems in Madison, Wisconsin. We manufacture the linear accelerator for our CyberKnife and TomoTherapy Systems at our Chengdu, China facility. Our facilities employ state-of-the-art manufacturing techniques and equipment. The components manufactured at our Chengdu facility are produced under the International Standard Organization (ISO), 13485:2016 certified quality management systems. The completed medical devices are designed, manufactured, installed, serviced and distributed at our Sunnyvale, Madison and Morges facilities under quality management systems which are compliant to the internationally recognized quality system standard for medical devices ISO, 13485:2016, and the Quality System regulations enforced by the FDA. We believe our manufacturing facilities will be adequate for our expected growth and foreseeable future demands for at least the next three years.

The manufacturing processes at our facilities include fabrication, subassembly, assembly, system integration and final testing. Our manufacturing personnel consist of fabricators, assemblers and technicians supported by production engineers as well as planning and supply chain managers. Our quality assurance program includes various quality control measures from inspection of raw material, purchased parts and assemblies through on-line inspection. We have also incorporated lean manufacturing techniques to improve manufacturing flow and efficiency. Lean manufacturing techniques include reducing wasteful and extraneous activities, balancing assembly and test flow, as well as better utilizing production assets and resources.

## **Intellectual Property**

The proprietary nature of, and protection for, our products, product components, processes and know-how are important to our business. We seek patent protection in the United States and internationally for our systems and other technology where available and when appropriate. We may also in-license the technology, inventions and improvements that we consider important to the development of our business. In addition, we also rely upon trade secrets, know-how, trademarks, copyright protection, as well as confidentiality agreements with employees, consultants and other third parties, to protect our proprietary rights and to develop and maintain our competitive position.

As of June 30, 2020, we held exclusive field of use licenses or ownership of approximately 472 U.S. and foreign patents, and approximately 129 U.S. and foreign patent applications. These patents and applications cover various components and techniques incorporated into the CyberKnife and TomoTherapy Systems, or which may be incorporated into new technologies under current development, all of which we believe will allow us to maintain a competitive advantage in the field of radiation therapy systems. We cannot be certain that any patents will be issued from any of our pending patent applications, nor can we be certain that any of our existing patents or any patents that may be granted to us in the future will provide us with protection.

We periodically monitor the activities of our competitors and other third parties with respect to their use of intellectual property.

## **Research and Development**

Continued innovation is critical to our future success. Our current product development activities include projects expanding clinical applications, driving product differentiation, and continually improving the usability, interoperability, reliability, and performance of our products. We continue to seek to develop innovative technologies so that we can improve our products and increase our sales. Some of our product improvements have been discussed above under the heading “Our Products.”

Our research activities strive to enable new product development opportunities by developing new technologies and advancing areas of existing core technology such as next generation linear accelerators, adaptive therapy, patient imaging, motion management, or treatment planning capabilities.

The modular design of our systems supports rapid development for new clinical capabilities and performance enhancements by generally allowing each subsystem to evolve within the overall platform design. Access to regular product upgrades protects customer investment in the system, facilitates the rapid adoption of new features and capabilities among existing installed base customers, and drives increasing value in our multiyear service plans. These upgrades will generally consist of software and hardware enhancements designed to increase the ease of use of our systems, improve the speed and accuracy of patient treatment and meet other customer needs.

A key component of our research and development program is our collaboration with research programs at selected hospitals, cancer treatment centers, academic institutions and research institutions worldwide. Our agreements with these third-party collaborators generally require us to make milestone-based payments during the course of a particular project and often also require that we make up-front payments to fund initial activities. Generally, we obtain non-exclusive worldwide rights to commercialize results from the collaboration with an option to negotiate an exclusive license. For inventions resulting from the collaboration that we own or exclusively license, we generally grant a royalty-free license for the purpose of continuing the institution’s research and development, and from time to time, we also grant broader licenses. Our research collaboration programs include work on clinical protocols and hardware and software developments. We also work with suppliers to develop new components in order to increase the reliability and performance of our products and seek opportunities to acquire or invest in the research of other parties where we believe it is likely to benefit our existing or future products.

We have entered into collaboration agreements with a variety of industrial partners within the fields of radiation oncology and medical imaging to provide us with opportunities to accelerate our innovation capability and bring complimentary products and technologies to market. We continue to seek out new partnerships to complement our internal developments and implement our product strategies.

## **Competition**

The medical device industry in general and the non-invasive cancer treatment field in particular, are subject to intense and increasing competition and rapidly evolving technologies. Because our products often have long development and regulatory clearance and approval cycles, we must anticipate changes in the marketplace and the direction of technological innovation and customer demands. To compete successfully, we will need to continue to demonstrate the advantages of our products and technologies over well-established alternative procedures, products and technologies, and convince physicians and other healthcare decision makers of the advantages of our products and technologies. Traditional surgery and other forms of minimally invasive procedures, brachytherapy, chemotherapy, immunotherapy, and other drugs remain alternatives to the CyberKnife and TomoTherapy Systems.

New product sales in this competitive market are primarily dominated by two companies: Elekta AB (Elekta) and Varian Medical Systems, Inc. (Varian), which recently announced a definitive agreement to combine with Siemens Healthineers in a transaction that is expected to close in the first half of calendar year 2021. Some manufacturers of standard linac systems, including Varian and Elekta, have products that can be used in combination with body and/or head frame systems and image-guidance systems to perform both radiosurgical and radiotherapy procedures. Our other competitors include BrainLAB AG (BrainLAB), ViewRay Inc. (ViewRay), and other companies in the radiosurgical and radiation therapy markets.

Furthermore, many government, academic and business entities are investing substantial resources in research and development of cancer treatments, including surgical approaches, radiation treatment, MRI-guided radiotherapy systems, proton therapy systems, drug treatment, immunotherapy, gene therapy, and other approaches. Successful developments that result in new approaches for the treatment of cancer could reduce the attractiveness of our products or render them obsolete.

Our future success will depend in large part on our ability to establish and maintain a competitive position in current and future technologies. Rapid technological development may render the CyberKnife and TomoTherapy Systems and their technologies obsolete. Many of our competitors have or may have greater corporate, financial, operational, sales and marketing resources, and more experience in research and development than we have. We cannot assume that our competitors will not succeed in developing or marketing technologies or products that are more effective or commercially attractive than our products or that would render our technologies and products obsolete or less useful. We may not have the financial resources, technical expertise, marketing, distribution or support capabilities to compete successfully in the future. Our competitive position also depends, among other things, on:

- Widespread awareness, acceptance and adoption of our products by the radiation oncology and cancer therapy markets;
- Innovations that improve the effectiveness and productivity of our systems' treatment processes and enable them to address emerging customer needs;
- Availability of reimbursement coverage from third-party payors (including insurance companies, governments, and/or others) for procedures performed using our systems;
- Inclusion of radiotherapy in countries' cancer treatment policies as an effective treatment modality;
- Published, peer-reviewed data supporting the efficacy and safety of our systems;
- Limiting the time required from proof of feasibility to routine production;
- Limiting the time period and cost of regulatory approvals or clearances;
- The manufacture and delivery of our products in sufficient volumes and on time, as well as accurately predicting and controlling costs associated with manufacturing, installation, warranty and maintenance of the products;
- Our ability to attract and retain qualified personnel;
- The extent of our intellectual property protection or our ability to otherwise develop and safeguard proprietary products and processes;
- Our ability to successfully expand into new and developing markets;
- Securing sufficient capital resources to expand both our continued research and development, and sales and marketing efforts; and
- Obtaining and maintaining any necessary United States or foreign regulatory approvals or clearances.

Our customers' equipment purchase considerations typically include reliability, treatment quality, service capabilities, patient throughput, price, payment terms and equipment supplier viability. We believe we compete favorably with our competitors on price and value based upon the technology offered by our treatment systems. We strive to provide a technologically superior product that covers substantially all aspects of radiation therapy to deliver precise treatments with high-quality clinical outcomes that meet or exceed customer expectations.

In addition to competition from technologies performing similar functions as our treatment systems, competition also exists for the limited capital expenditure budgets of our customers. For example, our treatment systems may compete with other equipment required by a radiation therapy department for financing under the same capital expenditure budget, which is typically limited. A purchaser, such as a hospital or cancer treatment center, may be required to select between the two items of capital equipment. Our ability to compete may also be adversely affected when purchase decisions are based solely upon price, since our products are premium-priced systems due to their higher level of functionality and performance.

## **U.S. Reimbursement**

In the United States, healthcare providers that purchase capital equipment such as the CyberKnife and TomoTherapy Systems generally rely on government and private third-party payors for reimbursement for the healthcare treatment and services they provide. Examples of these types of payors include Medicare, Medicaid, private health insurance plans, and health maintenance organizations, which reimburse all or a portion of the cost of treatment, as well as related healthcare services. Reimbursement involves three components: coverage, coding and payment.

### ***Coverage***

There are currently no National Coverage Determinations in place under Medicare for CyberKnife or TomoTherapy treatments. Medicare coverage criteria for treatments performed on a CyberKnife and TomoTherapy is outlined in Local Coverage Determinations or, in the absence of a formal policy, treatment is covered as long as it is considered reasonable and necessary. The most common indications covered by Medicare in Local Coverage Determinations for radiotherapy are primary and metastatic tumors in the brain, spine, lung, liver, kidney, pancreas, adrenal gland, head and neck, breast, prostate, abdominal and retroperitoneal regions, as well as other cancers that have failed previous treatment. Commercial payor policies vary with respect to coverage for radiotherapy including many of the indications covered by Medicare, though coverage criteria may differ.

### ***Coding***

The codes that are used to report radiosurgery treatment delivery in 2019 for the hospital outpatient department are Current Procedural Terminology (CPT) codes 77372 and 77373 for single fraction intracranial radiosurgery and single fraction extracranial/multi-session radiosurgery/stereotactic body radiation therapy. For freestanding centers, robotic radiosurgery is billed with robotic radiosurgery Healthcare Common Procedural Codes (HCPCs) G0339 and G0340. The non-robotic SRS/SBRT codes 77372 and 77373 are also payable codes in the freestanding site of service for non-robotic SRS/SBRT.

In 2019, in the hospital outpatient department, IMRT delivery is billed under CPT code 77385 for prostate, breast and physical compensator IMRT and 77386 for all other treatments. For 3D CRT three codes are used to report simple, intermediate, and complex treatments. Treatments using the TomoTherapy Systems, which are considered complex treatments, are reported under the complex 3D-CRT code 77412. In December 2015, the Patient Access and Medicare Protection Act (PAMPA) stopped the IMRT and 3D CRT delivery codes from being implemented and prevented reimbursement reductions in the freestanding center setting through calendar year 2019. Although the payment freeze is set to expire on December 31, 2019, Centers for Medicare and Medicaid Services (CMS) has indicated in the 2020 Medicare Physician Fee Schedule Proposed Rule that it will continue to recognize the temporary G codes and maintain payment stability in calendar year 2020. We expect all valid delivery codes will be recognized by commercial payers. Other codes are used to report treatment planning, dosimetry, treatment management, and other procedures routinely performed for treating radiosurgery or radiotherapy patients.

### ***Payment***

In the United States, the majority of procedures using the CyberKnife, TomoTherapy, and Radixact Systems are performed in the hospital outpatient department. Payment rates under the Medicare fee-for-service methodology are established based on cost data submitted by hospitals. CMS pays separately for ancillary procedures in addition to the delivery of IMRT, 3D CRT, and SRS/SBRT as well as a Comprehensive APC that bundles delivery and some ancillary services for single session cranial radiosurgery.

Payment for treatment with CyberKnife and TomoTherapy Systems are also available in the freestanding center setting. In 2019, the primary treatment delivery codes for robotic radiosurgery are priced by the regional Medicare Administrative Contractors. In 2020, it is expected the robotic SRS/SBRT delivery codes will remain contractor priced for providers paid under the traditional fee-for-service methodology. Payment rates for IMRT and 3DRT procedures are set by CMS with adjustments to account for geographic market variations. No major cuts by CMS have occurred to IMRT and 3DCRT in the past three years and payment is expected to remain stable through 2020.

In July 2019, CMS released a proposed rule titled *Medicare Program; Specialty Care Models to Improve Quality of Care and Reduce Expenditures*, which includes a new, alternative payment model for radiation oncology services. If finalized as proposed, this rule would significantly alter CMS' payment methodology for radiation oncology services. Specifically, payment would be determined by the patient's diagnosis and include all radiation oncology services provided within a 90-day period. Providers may be mandatorily required to participate in this model based upon the location where the radiation treatment is provided to the Medicare beneficiary. CMS projects that 40% of the radiation oncology providers will be included in the model and 60% will continue to receive reimbursement based on fee-for-service methodology. If implemented as proposed, CMS anticipates that this model will result in 3-5% savings to the Medicare program.

The federal government reviews and adjust rates annually, and from time to time consider various Medicare and other healthcare reform proposals that could significantly affect both private and public reimbursement for healthcare services, including radiotherapy and radiosurgery, in hospitals and free-standing clinics. In the past, we have seen our customers' decision-making process complicated by the uncertainties surrounding reimbursement rates for radiotherapy and radiosurgery in the United States. State government reimbursement for services is determined pursuant to each state's Medicaid plan, which is established by state law and regulations, subject to requirements of federal law and regulations.

### ***Foreign Reimbursement***

Internationally, reimbursement and healthcare payment systems vary from country to country and include single-payor, government-managed systems as well as systems in which private payors and government-managed systems exist side-by-side. In general, the process of obtaining coverage approvals has been slower outside of the United States. Our ability to achieve adoption of our treatment systems, and significant sales volume in international markets, will depend in part on the availability of reimbursement for procedures performed using our products.

### **Regulatory Matters**

#### ***Domestic Regulation***

Our products and software are medical devices subject to regulation by the FDA, as well as other regulatory bodies. FDA regulations govern the following activities that we perform and will continue to perform to ensure medical products distributed domestically or exported internationally are safe and effective for their intended uses:

- Product design and development;
- Document and purchasing controls;
- Production and process controls;
- Labeling and packaging controls;
- Product storage;
- Recordkeeping;
- Servicing;
- Corrective and preventive action and complaint handling;

- Pre-market clearance or approval;
- Advertising and promotion; and
- Product sales and distribution.

***FDA pre-market clearance and approval requirements.*** Unless an exemption applies, each medical device we wish to commercially distribute in the United States will require either 510(k) clearance or pre-market approval from the FDA. The FDA classifies medical devices into one of three classes. Devices deemed to pose lower risks are placed in either class I or II, which requires the manufacturer to submit to the FDA a pre-market notification requesting permission to commercially distribute the device, known as 510(k) clearance. Some low risk devices are exempted from this requirement. Devices deemed by the FDA to pose the greatest risks, such as life-sustaining, life-supporting or implantable devices, or devices deemed not substantially equivalent to a previously cleared 510(k) devices, are placed in class III, requiring pre-market approval. All of our current products are class II devices requiring 510(k) clearances.

***510(k) clearance pathway.*** When a 510(k) clearance is required, we must submit a pre-market notification demonstrating that our proposed device is substantially equivalent to a previously cleared and legally marketed 510(k) device or a device that was in commercial distribution before May 28, 1976 for which the FDA has not yet called for the submission of pre-market approval applications (PMA). By statute, the FDA has targets to clear or deny a 510(k) pre-market notification after 90 days of review from submission of the application. Clearance generally takes longer as the FDA may require further information, including clinical data, to make a determination regarding substantial equivalence.

In January 2002, we received 510(k) clearance for the TomoTherapy Hi-Art System intended to be used as an integrated system for the planning and delivery of IMRT for the treatment of cancer. In August 2008, we received 510(k) clearance for our TomoDirect System. In June 2016, we received 510(k) clearance for the Radixact Treatment Delivery Platform. We also received 510(k) clearance for our new treatment planning and data management systems, Accuray Precision Treatment Planning System and iDMS Data Management System. In November 2018, we received 510(k) clearance for Synchrony motion tracking and correction technology for the Radixact System.

In July 1999, we received 510(k) clearance for the CyberKnife System for use in the head and neck regions of the body. In August 2001, we received 510(k) clearance for the CyberKnife System to provide treatment planning and image guided stereotactic radiosurgery and precision radiotherapy for lesions, tumors and conditions anywhere in the body where radiation treatment is indicated. In April 2002, we received 510(k) clearance for the Synchrony Motion Tracking System as an option to the CyberKnife System, intended to enable dynamic image guided stereotactic radiosurgery and precision radiotherapy of lesions, tumors and conditions that move under influence of respiration. In October 2012, we received 510(k) clearance for the InCise MLC with clearance from the FDA on July 1, 2015.

***Pre-market approval (PMA) pathway.*** A PMA must be submitted to the FDA if the device is not eligible for the 510(k) clearance process. A PMA must be supported by extensive data including, but not limited to, technical, preclinical, clinical trials, manufacturing and labeling to demonstrate reasonable evidence of the device's safety and efficacy to the FDA's satisfaction. Currently, no device we have developed and commercialized has required pre-market approval.

***Product modifications.*** After a device receives 510(k) clearance or a PMA approval, it may be changed or modified. Any modification that could significantly affect its safety or effectiveness, or that would constitute a significant change in its intended use, will require a new clearance or approval. Regulations provide that the manufacturer initially determines when a specific modification requires notification to FDA. The FDA has issued draft guidance that, if finalized and implemented, will result in manufacturers needing to seek a significant number of new clearances for changes made to legally marketed devices. The FDA reviews the manufacturer's decision to file a 510(k) or PMA for modifications during facility audits.

We have modified aspects of our CyberKnife and TomoTherapy Systems since receiving regulatory clearance, and we have applied for and obtained additional 510(k) clearances for these modifications when we determined such clearances were required. The FDA may review our 510(k) filing decision, and can disagree with our initial determination. FDA may take regulatory action from requiring new filings to injunction if it disagrees with our determinations not to seek a new 510(k) clearance or PMA approval for modifications. The FDA reviewed and cleared the most recent versions of the CyberKnife System and TomoTherapy Systems, including the Radixact System, in this fiscal year.

***Pervasive and continuing regulation.*** After a device is placed on the market, numerous regulatory requirements apply. These include:

- Quality System Regulation (QSR), which require manufacturers, including third-party manufacturers, to follow stringent design, testing, documentation and other quality assurance procedures during product design and throughout the manufacturing process;
- Labeling regulations and FDA prohibitions against the promotion of products for uncleared, unapproved or off-label uses; and
- Medical device reporting regulations, which require that manufacturers report to the FDA if their device may have caused or contributed to a death or serious injury or malfunctioned in a way that would likely cause or contribute to a death or serious injury if the malfunction were to recur.

The FDA has broad post-market and regulatory enforcement powers. We are subject to unannounced inspections by the FDA and the Food and Drug Branch of the California Department of Health Services to determine our compliance with the QSR and other regulations, and these inspections may include the manufacturing facilities of some of our subcontractors. Our Madison facility, where we manufacture the finished TomoTherapy and CyberKnife Systems, was most recently inspected by the FDA in August 2017. The August 2017 inspection resulted in no observations. We believe we are in substantial compliance with the QSR. Failure to comply with applicable regulatory requirements can result in enforcement action by the FDA, which may include any of the following sanctions:

- Fines, injunctions, consent decrees and civil penalties;
- Recall or seizure of our products;
- Operating restrictions, partial suspension or total shutdown of production;
- Refusing our requests for 510(k) clearance or pre-market approval of new products or new intended uses;
- Withdrawing 510(k) clearance or pre-market approvals that are already granted; and
- Criminal prosecution.

The FDA also has the authority to require us to repair, replace or refund the cost of any medical device that we have manufactured or distributed. If any of these events were to occur, they could have a material adverse effect on our business.

***Radiological health.*** Because our CyberKnife and TomoTherapy Systems contain both laser and X-ray components, and because we assemble these components during manufacturing and service activities, we are also regulated under the Electronic Product Radiation Control Provisions of the United States Federal Food, Drug, and Cosmetic Act. This law requires laser and X-ray products to comply with regulations and applicable performance standards, and manufacturers of these products to certify in product labeling and reports to the FDA that their products comply with all such standards. The law also requires manufacturers to file new product reports, and to file annual reports and maintain manufacturing, testing and sales records, and report product defects. Various warning labels must be affixed. Assemblers of diagnostic X-ray systems are also required to certify in reports to the FDA, equipment purchasers, and where applicable, to state agencies responsible for radiation protection, that diagnostic and/or therapeutic X-ray systems they assemble meet applicable requirements. Failure to comply with these

requirements could result in enforcement action by the FDA, which can include injunctions, civil penalties, and the issuance of warning letters.

***Fraud and abuse laws.*** We are subject to various federal and state laws pertaining to healthcare fraud and abuse, including anti-kickback laws and physician self-referral laws. Violations of these laws are punishable by significant criminal and civil sanctions, including, in some instances, exclusion from participation in federal and state healthcare programs, including Medicare and Medicaid. Because of the far-reaching nature of these laws, there can be no assurance that we would not be required to alter one or more of our practices to be in compliance with these laws. Evolving interpretations of current laws or the adoption of new federal or state laws or regulations could adversely affect many of the arrangements we have with customers and physicians. In addition, there can be no assurance that the occurrence of one or more violations of these laws or regulations would not result in a material adverse effect on our financial condition and results of operations.

***Anti-kickback laws.*** Our operations are subject to broad and changing federal and state anti-kickback laws. The Office of the Inspector General of the Department of Health and Human Services (OIG) is primarily responsible for enforcing the federal Anti-Kickback Statute and generally for identifying fraud and abuse activities affecting government programs. The federal Anti-Kickback Statute prohibits persons from knowingly and willfully soliciting, receiving, offering or providing remuneration directly or indirectly to induce either the referral of an individual, or the furnishing, recommending, or arranging of a good or service, for which payment may be made under a federal healthcare program such as Medicare and Medicaid. “Remuneration” has been broadly interpreted to include anything of value, including such items as gifts, discounts, the furnishing of supplies or equipment, credit arrangements, waiver of payments, and providing anything of value at less than fair market value.

Penalties for violating the federal Anti-Kickback Statute include criminal fines of up to \$25,000 and/or imprisonment for up to five years for each violation, civil monetary penalties, which could result in treble damages plus fines of up to \$50,000 for each violation, and possible exclusion from participation in federal healthcare programs such as Medicare and Medicaid. Many states have adopted prohibitions similar to the federal Anti-Kickback Statute, some of which apply to the referral of patients for healthcare services reimbursed by any source, not only by the Medicare and Medicaid programs, and do not include comparable exceptions.

The OIG has issued safe harbor regulations which set forth certain activities and business relationships that are deemed safe from prosecution under the federal Anti-Kickback Statute. There are safe harbors for various types of arrangements, including, without limitation, certain investment interests, leases and personal services and management contracts. The failure of a particular activity to comply in all regards with the safe harbor regulations does not mean that the activity violates the federal Anti-Kickback Statute or that prosecution will be pursued. However, conduct and business arrangements that do not fully satisfy each applicable safe harbor may result in increased scrutiny by government enforcement authorities such as the OIG.

The OIG has identified the following arrangements with purchasers and their agents as ones raising potential risk of violation of the federal Anti-Kickback Statute:

- Discount and free good arrangements that are not properly disclosed or accurately reported to federal healthcare programs;
- Product support services, including billing assistance, reimbursement consultation and other services specifically tied to support of the purchased product, offered in tandem with another service or program (such as a reimbursement guarantee) that confers a benefit to the purchaser;
- Educational grants conditioned in whole or in part on the purchase of equipment, or otherwise inappropriately influenced by sales and marketing considerations;
- Research funding arrangements, particularly post-marketing research activities, that are linked directly or indirectly to the purchase of products, or otherwise inappropriately influenced by sales and marketing considerations; and
- Other offers of remuneration to purchasers that are expressly or impliedly related to a sale or sales volume, such as “rebates” and “upfront payments,” other free or reduced-price goods or services, and payments to

cover costs of “converting” from a competitor’s products, particularly where the selection criteria for such offers vary with the volume or value of business generated.

We have a variety of financial relationships with physicians who are in a position to generate business for us. For example, physicians who own our stock also provide medical advisory and other consulting or collaboration services. Similarly, we have a variety of different types of arrangements with our customers. In the case of our former placement program, certain services and upgrades were provided without additional charge based on procedure volume. In the past, we have also provided loans to our customers. We also provide research or educational grants to customers to support customer studies related to, among other things, our CyberKnife and TomoTherapy Systems.

If our past or present operations are found to be in violation of the federal Anti-Kickback Statute or similar government regulations to which we or our customers are subject, we or our officers may be subject to the applicable penalty associated with the violation, including significant civil and criminal penalties, damages, fines, imprisonment, and exclusion from the Medicare and Medicaid programs. The impact of any such violation may lead to curtailment or restructuring of our operations. Any penalties, damages, fines, or curtailment or restructuring of our operations could adversely affect our ability to operate our business and our financial results. The risk of our being found in violation of these laws is increased by the fact that some of these laws are open to a variety of interpretations. Any action against us for violation of these laws, even if we successfully defend against it, could cause us to incur significant legal expenses, divert our management’s attention from the operation of our business and damage our reputation. If an enforcement action were to occur, our reputation and our business and financial condition could be harmed, even if we were to prevail or settle the action. Similarly, if the physicians or other providers or entities with which we do business are found to be non-compliant with applicable laws, they may be subject to sanctions, which could also have a negative impact on our business.

**Transparency laws.** The Physician Payment Sunshine Act (the Sunshine Act), which was enacted by Congress as part of the Patient Protection and Affordable Care Act on December 14, 2011, requires each applicable manufacturer, which includes medical device companies such as Accuray, to track and report to the federal government on an annual basis all payments and other transfers of value from such applicable manufacturer to U.S. licensed physicians and teaching hospitals as well as physician ownership of such applicable manufacturer’s equity, in each case subject to certain statutory exceptions. Such data will be made available by the government on a publicly searchable website. Failure to comply with the data collection and reporting obligations imposed by the Sunshine Act can result in civil monetary penalties ranging from \$1,000 to \$10,000 for each payment or other transfer of value that is not reported (up to a maximum of \$150,000 per reporting period) and from \$10,000 to \$100,000 for each knowing failure to report (up to a maximum of \$1 million per reporting period). In addition, we are subject to similar state and foreign laws related to the tracking and reporting of payments and other transfers of value to healthcare professionals. These laws require or will require that we implement the necessary and costly infrastructure to track and report such payments and transfers of value. Failure to comply with these new tracking and reporting laws could subject us to significant civil monetary penalties.

**Physician self-referral laws.** We are also subject to federal and state physician self-referral laws. The federal Ethics in Patient Referrals Act of 1989, commonly known as the Stark Law, prohibits, subject to certain exceptions, physician referrals of Medicare and Medicaid patients to an entity providing certain “designated health services” if the physician or an immediate family member has any financial relationship with the entity. The Stark Law also prohibits the entity receiving the referral from billing any good or service furnished pursuant to an unlawful referral.

In addition, in July 2008, CMS issued a final rule implementing significant amendments to the regulations under the Stark Law. The final rule, which was effective October 1, 2009, imposes additional limitations on the ability of physicians to refer patients to medical facilities in which the physician or an immediate family member has an ownership interest for treatment. Among other things, the rule provides that leases of equipment between physician owners that may refer patients and hospitals must be on a fixed rate, rather than a per use basis. Prior to enactment of the final rule, physician owned entities had increasingly become involved in the acquisition of medical technologies, including the CyberKnife System. In many cases, these entities entered into arrangements with hospitals that billed Medicare for the furnishing of medical services, and the physician owners were among the physicians who referred patients to the entity for services. The rule limits these arrangements and could require the restructuring of existing arrangements between physicians owned entities and hospitals and could discourage physicians from participating in the acquisition and ownership of medical technologies. The final rule also prohibits

percentage-based compensation in equipment leases. As a result of the finalization of these regulations, some existing CyberKnife System operators have modified or restructured their corporate or organizational structures. In addition, certain customers that planned to open CyberKnife centers in the United States involving physician ownership have restructured their legal ownership structure. Certain entities were not able to establish viable models for CyberKnife System operation and therefore canceled their CyberKnife System purchase agreements. Accordingly, these regulations have resulted in cancellations of CyberKnife System purchase agreements and could also reduce the attractiveness of medical technology acquisitions, including CyberKnife System purchases, by physician-owned joint ventures or similar entities. As a result, these regulations have had, and could continue to have, an adverse impact on our product sales and therefore on our business and results of operations.

A person who engages in a scheme to circumvent the Stark Law's referral prohibition may be fined up to \$100,000 for each such arrangement or scheme. In addition, any person who presents or causes to be presented a claim to the Medicare or Medicaid programs in violations of the Stark Law is subject to civil monetary penalties of up to \$15,000 per bill submission, an assessment of up to three times the amount claimed, and possible exclusion from federal healthcare programs such as Medicare and Medicaid. Various states have corollary laws to the Stark Law, including laws that require physicians to disclose any financial interest they may have with a healthcare provider to their patients when referring patients to that provider. Both the scope and exceptions for such laws vary from state to state.

***Federal False Claims Act.*** The federal False Claims Act prohibits the knowing filing or causing the filing of a false claim or the knowing use of false statements to obtain payment from the federal government. When an entity is determined to have violated the False Claims Act, it may be required to pay three times the actual damages sustained by the government, plus mandatory civil penalties of between \$11,181 and \$22,363 for each separate false claim. Suits filed under the False Claims Act, known as "qui tam" actions, can be brought by any individual on behalf of the government and such individuals, sometimes known as "relators" or, more commonly, as "whistleblowers," may share in any amounts paid by the entity to the government in fines or settlement. In addition, certain states have enacted laws modeled after the federal False Claims Act. Qui tam actions have increased significantly in recent years, causing greater numbers of healthcare companies to have to defend a false claim action, pay fines or be excluded from Medicare, Medicaid or other federal or state healthcare programs as a result of an investigation arising out of such action. We have retained the services of a reimbursement consultant, for which we pay certain consulting fees, to provide us and facilities that have purchased a CyberKnife or TomoTherapy System, with general reimbursement advice. While we believe this will assist our customers in filing proper claims for reimbursement, and even though such consultants do not submit claims on behalf of our customers, the fact that we provide these consultant services could expose us to additional scrutiny and possible liability in the event one of our customers is investigated and determined to be in violation of any of these laws.

***HIPAA.*** The Health Insurance Portability and Accountability Act of 1996 (HIPAA), created two new federal crimes: healthcare fraud and false statements relating to healthcare matters. The healthcare fraud statute prohibits knowingly and willfully executing a scheme to defraud any healthcare benefit program, including private payors. A violation of this statute is a felony and may result in fines, imprisonment or exclusion from government sponsored programs. The false statements statute prohibits knowingly and willfully falsifying, concealing or covering up a material fact or making any materially false, fictitious or fraudulent statement in connection with the delivery of or payment for healthcare benefits, items or services. A violation of this statute is a felony and may result in fines or imprisonment.

As a participant in the healthcare industry, we are also subject to extensive federal and state laws and regulations protecting the privacy and integrity of patient medical information, including privacy and security standards required under HIPAA. The HIPAA privacy standard was amended by the Health Information Technology for Economic and Clinical Health Act (HITECH), enacted as part of the American Recovery and Reinvestment Act of 2009. HITECH significantly increases the civil money penalties for violations of patient privacy rights protected under HIPAA. Although we are not a covered entity under HIPAA, we have entered into agreements with certain covered entities under which we are considered to be a "business associate" under HIPAA. As a business associate, we are required to implement policies, procedures and reasonable and appropriate security measures to protect individually identifiable health information we receive from covered entities. Furthermore, as of February 2010, business associates are now directly subject to regulations under HIPAA directly, including a new enforcement scheme, criminal and civil penalties for certain violations, and inspection requirements.

***Foreign Corrupt Practices Act.*** The United States and foreign government regulators have increased regulation, enforcement, inspections and governmental investigations of the medical device industry, including increased United States government oversight and enforcement of the Foreign Corrupt Practices Act. Whenever the United States or another foreign governmental authority concludes that we are not in compliance with applicable laws or regulations, such governmental authority can impose fines, delay or suspend regulatory clearances, institute proceedings to detain or seize our products, issue a recall, impose operating restrictions, enjoin future violations and assess civil penalties against us or our officers or employees, and can recommend criminal prosecution to the Department of Justice. Moreover, governmental authorities can ban or request the recall, repair, replacement or refund of the cost of any device or product we manufacture or distribute. We are also potentially subject to the UK Bribery Act, which could also lead to the imposition of civil and criminal fines. Any of the foregoing actions could result in decreased sales as a result of negative publicity and product liability claims, and could have a material adverse effect on our financial condition, results of operations and prospects.

### ***International Regulation***

International sales of medical devices are subject to foreign government regulations, which vary substantially from country to country. The time required to obtain clearance or approval by a foreign country may be longer or shorter than that required for FDA clearance or approval, and the requirements are often different.

The primary regulatory environment in Europe is that of the European Union and the three additional member states of the European Economic Area (EEA), which have adopted similar laws and regulations with respect to medical devices. The European Union has adopted numerous directives and the European Committee for Standardization has promulgated standards regulating the design, manufacture, clinical trials, labeling and adverse event reporting for medical devices. Devices that comply with the requirements of the relevant directive will be entitled to bear CE conformity marking, indicating that the device conforms to the essential requirements of the applicable directives and, accordingly, may be commercially distributed throughout the member states of the EEA.

The method of assessing conformity to applicable standards and directives depends on the type and class of the product, but normally involves a combination of self-assessment by the manufacturer and a third-party assessment by a notified body, an independent and neutral institution appointed by a European Union member state to conduct the conformity assessment. This relevant assessment may consist of an audit of the manufacturer's quality system (currently ISO 13485), provisions of the Medical Devices Directive, and specific testing of the manufacturer's device. Our facilities were first awarded the ISO 13485 certification in September 2002 and has been subsequently maintained through periodic assessments, and we are currently authorized to affix the CE mark to our products, allowing us to sell our products throughout the European Economic Area. The Medical Device Regulation (MDR) comes into effect in the European Union in 2020. We will be required to obtain certification against the MDR to CE mark new products, or make significant changes to existing products.

We are also currently subject to regulations in Japan. Under the Pharmaceutical Affairs Law in Japan, a pre-market approval necessary to sell, market and import a product (Shonin) must be obtained from the Ministry of Health, Labor and Welfare (MHLW), for our products. A Japanese distributor received the first government approval to market the CyberKnife System from MHLW in November 1996. We received and maintain Shonin approval from MHLW for CyberKnife Treatment Delivery Systems, M6 Series with InCise MLC, TomoTherapy Treatment Delivery Systems, Radixact Treatment Delivery Systems, and associated Precision and iDMS software products.

We are subject to additional regulations in other foreign countries, including, but not limited to, Canada, Taiwan, China, Korea, and Russia in order to sell our products. We intend that either we or our distributors will receive any necessary approvals or clearance prior to marketing our products in those international markets.

## ***State Certificate of Need Laws***

In some states, a certificate of need or similar regulatory approval is required prior to the acquisition of high-cost capital items or the provision of new services. These laws generally require appropriate state agency determination of public need and approval prior to the acquisition of such capital items or addition of new services. Certificate of need regulations may preclude our customers from acquiring one of our systems, and from performing stereotactic radiosurgery procedures using one of our systems. Several of our prospective customers currently are involved in appeals of certificate of need determinations. If these appeals are not resolved in favor of these prospective customers, they may be precluded from purchasing and/or performing services using one of our systems. Certificate of need laws are the subject of continuing legislative activity, and a significant increase in the number of states regulating the acquisition and use of one of our systems through certificate of need or similar programs could adversely affect us.

## **Backlog**

For a discussion of our fiscal 2020 backlog, please refer to the section entitled “*Backlog*,” in Item 7, Management’s Discussion and Analysis of Financial Condition and Results of Operations.

## **Employees**

As of June 30, 2020, we had 932 employees worldwide. None of the employees are represented by a labor union or covered by a collective bargaining agreement. We have never experienced any employment related work stoppages and we believe our relationship with our employees is good.

## **Geographic Information**

For financial reporting purposes, net sales and long-lived assets attributable to significant geographic areas are presented in Note 17, *Segment Disclosure*, to the consolidated financial statements, which are incorporated herein by reference.

## **Available Information**

Our main corporate website address is [www accuray.com](http://www accuray.com). We make available on this web site, free of charge, copies of our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and our proxy statements, and any amendments to those reports, as soon as reasonably practicable after filing such material electronically or otherwise furnishing it to the Securities and Exchange Commission, the SEC. All SEC filings are also available at the SEC’s website at [www.sec.gov](http://www.sec.gov).

We also use our investor relations website as a channel of distribution for important company information. For example, webcasts of our earnings calls and certain events we participate in or host with members of the investment community are on our investor relations website. Additionally, we announce investor information, including news and commentary about our business and financial performance, SEC filings, notices of investor events, and our press and earnings releases, on our investor relations website. Investors and others can receive notifications of new information posted on our investor relations website in real time by signing up for email alerts and RSS feeds. Further corporate governance information, including our corporate governance guidelines, board committee charters, and code of conduct, is also available on our investor relations website under the heading “Governance.” The contents of our websites are not incorporated by reference into this Annual Report on Form 10-K or in any other report or document we file with the SEC, and any references to our websites are intended to be inactive textual references only.

## Item 1A. RISK FACTORS

*We operate in a rapidly changing environment that involves significant risks, a number of which are beyond our control. In addition to the other information contained in this Form 10 K, the following discussion highlights some of these risks and the possible impact of these factors on our business, financial condition and future results of operations. If any of the following risks actually occur, our business, financial condition or results of operations may be adversely impacted, causing the trading price of our common stock to decline. In addition, these risks and uncertainties may impact the “forward looking” statements described elsewhere in this Form 10 K and in the documents incorporated herein by reference. They could affect our actual results of operations, causing them to differ materially from those expressed in “forward looking” statements.*

***The effect of the COVID-19 pandemic, or the perception of its effects, as well as the responses of governments and private industry on our operations and the operations of our customers and suppliers, have and could continue to have a material adverse effect on our business, financial condition, results of operations, or cash flows.***

In December 2019, a novel strain of coronavirus, SARS-CoV-2, which causes coronavirus disease 2019, or COVID-19, surfaced in Wuhan, China and on March 11, 2020, the World Health Organization declared COVID-19 a pandemic, which has affected global operations and global supply chains. The outbreak continues to grow and related government and private sector responsive actions have impacted and may continue to adversely affect our business operations. It is impossible to predict the potential spread of COVID-19 globally and the full extent of the effects that it may have on our business, operations, financial condition or the economy.

Governments, public institutions, and other organizations in countries and localities where cases of COVID-19 have spread are taking certain preventative or protective measures to combat the rise in cases, including implementation of travel restrictions or bans and closure of non-essential businesses as well as limitations on public gatherings and other social distancing and shelter-in-place measures. While the full impact of the pandemic is not yet known, we are closely monitoring the spread of COVID-19 and are continually assessing its potential effects on our business. As of the date of the filing of this Form 10-K, we have experienced a decline in deliveries and installations of our products, which has adversely impacted the pace at which our backlog converts to revenue, due to timing delays caused by the COVID-19 pandemic, including disruptions in the operations of our customers that have redirected customer resources to the COVID-19 response, disruptions and restrictions on our ability to travel to customer sites, disruptions in our supply chain and manufacturing interruptions. We have also experienced disruptions in our sales and revenue cycle as a result of restrictions on our ability to travel to and meet with customers and potential customers and other delays caused by the COVID-19 pandemic as well as increases in customer defaults, delays in payment and planned installations and service agreements as a result of the changes to and redirection of customer resources to the response to the COVID-19 pandemic and closures of customer facilities. We have also received requests from a few customers to extend payment terms or temporarily suspend service and corresponding payment obligations and while we have only received a small number of requests thus far, there can be no guarantee that more customers will not ask for the same if the effects of the COVID-19 pandemic deepen or worsen. Additionally, to protect the health and well-being of our employees, suppliers, and customers, we have also made substantial modifications to employee travel and suspended non-essential work travel, implemented remote work arrangements as employees are advised to work from home, and cancelled or shifted most of our conferences and other marketing events to virtual through fiscal year 2021. In addition, other impacts of the COVID-19 pandemic may include significant and unpredictable reductions in the demand for our products, a deepening of the changes to the operations and workflows of our customers that could result in increased customer defaults or delays in payment; additional delays, cancellations and redirection of planned capital expenditures and installations of our system by our customers to focus resources on COVID-19; disruptions in our supply chain or a reduction or interruption in any of our manufacturing processes resulting in our inability to meet demand for our products; or closures of our key facilities or the facilities of our customers or suppliers.. These impacts and others that have resulted as a result of the COVID-19 pandemic and the unprecedented measures to slow the spread of the virus globally have had and will continue to have a negative impact on our business, operations and financial condition.

We are also experiencing a global economic slowdown as a result of the COVID-19 pandemic, which may result in an incremental adverse impact on our revenue, net income (loss) and cash flow and may require significant

additional expenditures to mitigate such impacts. Additionally, the impact of the COVID-19 pandemic on the global financial markets may reduce our ability to access capital, which could negatively impact our short-term and long-term liquidity. The extent to which our operations and financial condition are affected by COVID-19, including our ability to execute our business strategies and initiatives in the expected time frame, will largely depend on future developments that cannot be accurately predicted at this time and are uncertain, including new information that may emerge concerning the severity and scope of the COVID-19 pandemic (including whether there is a resurgence or other additional periods of increases or spikes in the number of COVID-19 cases in areas in which we operate), new or additional actions taken to contain COVID-19 or address its impact and the timing of global recovery and economic normalization, among others. The situation is developing rapidly, and additional impacts may arise that we are not aware of currently, however, the COVID-19 pandemic or the perception of its effects could have a material adverse effect on our business, financial condition, results of operations, or cash flows.

***If the CyberKnife or TomoTherapy Systems do not achieve widespread market acceptance, we will not be able to generate the revenue necessary to support our business.***

Achieving physician, patient, hospital administrator and third-party payor acceptance of the CyberKnife and TomoTherapy Systems as preferred methods of tumor treatment is crucial to our continued success. Physicians will not begin to use or increase the use of the CyberKnife or TomoTherapy Systems unless they determine, based on experience, clinical data and other factors, that the CyberKnife and TomoTherapy Systems are safe and effective alternatives to traditional treatment methods. Further, physicians may be slow to adopt new or updated versions of our CyberKnife and TomoTherapy Systems because of the perceived liability risks arising from the use of new products and the uncertainty of reimbursement from third-party payors, particularly in light of ongoing health care reform initiatives and the evolving U.S. health care environment.

We often need to educate physicians about the use of stereotactic radiosurgery, image guided radiation therapy (IGRT) and adaptive radiation therapy, convince healthcare payors that the benefits of the CyberKnife and TomoTherapy Systems and their related treatment processes outweigh their costs, and help train qualified physicians in the skilled use of these systems. In addition, we also must educate prospective customers regarding the entire functionality of our radiation therapy systems and their relative benefits compared to alternative products and treatment methods. We must also increase awareness among potential patients, who are increasingly educated about treatment options and therefore impact adoption of new technologies by clinicians. We have expended and will continue to expend significant resources on marketing and educational efforts to create awareness of stereotactic radiosurgery and robotic intensity-modulated radiotherapy (IMRT) as well as adaptive radiation therapy and IGRT generally and to encourage the acceptance and adoption of our products for these technologies. We cannot be sure that our products will gain significant market acceptance among physicians, patients and healthcare payors, even if we spend significant time and expense on their education.

In addition to achieving market acceptance of our products and the need to educate physicians and others about the benefits of our products, the CyberKnife and TomoTherapy Systems are major capital purchases, and purchase decisions are greatly influenced by hospital administrators who are subject to increasing pressures to reduce costs. In addition, hospitals and other health professionals may reduce staffing and reduce or postpone meetings with potential suppliers in response to the spread of an infectious disease, such as COVID-19, effectively delaying the decision on potential purchases of new products such as ours. These and other factors, including the following, may affect the rate and level of market acceptance of each of the CyberKnife and TomoTherapy Systems:

- the CyberKnife and TomoTherapy Systems' price relative to other products or competing treatments;
- our ability to develop new products and enhancements and receive regulatory clearances and approval, if required, to such products in a timely manner;
- increased scrutiny by state boards when evaluating certificates of need requested by purchasing institutions;
- perception by patients, physicians and other members of the healthcare community of the CyberKnife and TomoTherapy Systems' safety, efficacy, efficiency and benefits compared to competing technologies or treatments;
- willingness of physicians to adopt new techniques and the ability of physicians to acquire the skills necessary to operate the CyberKnife and TomoTherapy Systems;
- extent of third-party coverage and reimbursement rates, particularly from Medicare, for procedures using the CyberKnife and TomoTherapy Systems; and
- development of new products and technologies by our competitors or new treatment alternatives.

If the CyberKnife or TomoTherapy Systems are unable to achieve or maintain market acceptance, new orders and sales of our systems would be adversely affected, our revenue levels would decrease and our business would be harmed.

***Our ability to achieve profitability depends in part on maintaining or increasing our gross margins on product sales and services, which we may not be able to achieve.***

As of June 30, 2020, we had an accumulated deficit of \$481.7 million. We may incur net losses in the future, particularly as selling and marketing activities increase ahead of any expected revenue. Our ability to achieve and sustain long-term profitability is largely dependent on our ability to successfully market and sell the CyberKnife and TomoTherapy Systems, control our costs, and effectively manage our growth. We cannot assure you that we will be able to achieve profitability and even if we do achieve profitability, we may not be able to sustain or increase profitability on a quarterly or annual basis. In the event we fail to achieve profitability, our stock price could decline.

Our ability to achieve profitability also depends on our ability to maintain or increase our gross margins on product sales and services. A number of factors may adversely impact such gross margins, including:

- lower than expected manufacturing yields of high cost components leading to increased manufacturing costs;
- low production volume, which will result in high levels of overhead cost per unit of production;
- our ability to recognize revenue from our sales and the timing of revenue recognition and revenue deferrals;
- increased material or labor costs;
- increased inventory costs and liabilities for excess inventory resulting from inventory held in excess of forecasted demand;
- increased service or warranty costs or the failure to reduce service or warranty costs;
- increased price competition;
- variation in the margins across products installed in a particular period;
- changes to U.S. and foreign trade policies, including enactments of tariffs on goods imported into the U.S. and any retaliatory tariffs imposed by other countries on U.S. goods, including our products; and
- how well we execute on our strategic and operating plans.

If we are unable to maintain or increase our gross margins on product sales and service, our results of operations could be adversely impacted, we may not achieve profitability and our stock price could decline.

***We have outstanding indebtedness in the form of our 3.75% Convertible Notes, Revolving Credit Facility and Term Loan and may incur other debt in the future, which may adversely affect our financial condition and future financial results.***

In August 2017, we issued \$85.0 million aggregate principal amount of our 3.75% Convertible Senior Notes due 2022 (the “3.75% Convertible Notes”). As our debt matures, we anticipate having to expend significant resources to either repay or refinance the 3.75% Convertible Notes. For example, in August 2017, in connection with the issuance of the 3.75% Convertible Notes, we (i) exchanged approximately \$47.0 million aggregate principal amount of our then-outstanding 3.50% Convertible Senior Notes due 2018 and 3.50% Series A Convertible Senior Notes due 2018 (collectively, the “Existing Notes”) for \$53.0 million aggregate principal amount of 3.75% Convertible Notes and (ii) repurchased approximately \$28.0 million of Existing Notes. If we decide to refinance the 3.75% Convertible Notes in the future, we may be required to do so on different or less favorable terms or we may be unable to refinance the 3.75% Convertible Notes at all, both of which may adversely affect our financial condition.

In June 2017, we entered into a credit and security agreement that provided us with an initial revolving credit facility (the “Revolving Credit Facility”) of \$52.0 million, which was amended in December 2017 to reduce the Revolving Credit Facility to \$32.0 million. We also entered into a credit and security agreement that provides for an initial term loan of \$40.0 million with a second tranche of \$20.0 million available for draw until December 31, 2018 if specified conditions are met (the “Term Loan” and, together with the Revolving Credit Facility, the “Credit Facilities”). We further amended the credit and security agreements with respect to the Credit Facilities in July 2018, December 2018, May 2019 and August 2019 to, among other things, provide for adjustments to the financial covenants and applicable margin and increase the Term Loan commitments by \$25 million. Such credit and security agreements were most recently amended in July 2020 to, among other things, provide for further adjustments to certain financial covenants.

As of June 30, 2020, we had total consolidated liabilities of approximately \$427.3 million; including long-term liability components of the 3.75% Convertible Notes of \$76.4 million, and the Revolving Credit Facility of \$28.0 million and the Term Loan of \$84.9 million. Our existing and future levels of indebtedness could have important consequences to stockholders and note holders and may adversely affect our financial conditions and future financial results by, among other things:

- affecting our ability to satisfy our obligations under the 3.75% Convertible Notes and Credit Facilities;
- requiring a substantial portion of our cash flows from operations to be dedicated to interest and principal payments, which may not be available for operations, working capital, capital expenditures, expansion, acquisitions or general corporate or other purposes;
- impairing our ability to obtain additional financing in the future;
- limiting our flexibility in planning for, or reacting to, changes in our business and industry; and
- increasing our vulnerability to downturns in our business, our industry or the economy in general, including any such downturn related to the impact of the COVID-19 pandemic.

The credit and security agreements governing the Credit Facilities also includes certain restrictive covenants that limit, among other things, our ability and our subsidiaries’ ability to (i) incur indebtedness, (ii) incur liens on their property, (iii) pay dividends or make other distributions, (iv) sell their assets, (v) make certain loans or investments, (vi) merge or consolidate, (vii) voluntarily repay or prepay certain indebtedness and (viii) enter into transactions with affiliates, in each case, subject to certain exceptions. In addition, the such agreements require us to meet certain financial covenants, including a fixed charge coverage ratio, minimum net revenue, minimum consolidated cash balance and minimum consolidated domestic cash balance tests, as defined in the applicable credit and security agreement governing the Credit Facilities. These restrictions could adversely affect our ability to finance our future operations or capital needs, withstand a future downturn in our business or the economy in general, engage in business activities, including future opportunities that may be in our interest, and plan for or react to market conditions or otherwise execute our business strategies. Our ability to comply with the covenants and other terms

governing the Credit Facilities will depend in part on our future operating performance. If we fail to comply with such covenants and terms, we may be in default and the maturity of the related debt could be accelerated and become immediately due and payable. In addition, because our assets are pledged as a security under the Credit Facilities, if we are not able to cure any default or repay outstanding borrowings, our assets are subject to the risk of foreclosure by our lenders. From time to time, we may not be in compliance with such covenants or other terms governing the Credit Facilities and we may be required to obtain waivers or amendments to the applicable credit and security agreement from our lenders in order to maintain compliance and there can be no certainty that any such waiver or amendment will be available, or what the cost of such waiver or amendment, if obtained, would be. If we are unable to obtain necessary waivers and the debt under such credit facility is accelerated, we would be required to obtain replacement financing at prevailing market rates, which may not be favorable to us. Additionally, a default on indebtedness could result in a default under the terms of the indenture governing our 3.75% Convertible Notes. There is no guarantee that we would be able to satisfy our obligations if any of our indebtedness is accelerated.

***Our operating results, including our quarterly orders, revenues and margins fluctuate from quarter to quarter and may be unpredictable, which may result in a decline in our stock price.***

We have experienced and expect in the future to experience fluctuations in our operating results, including gross orders, revenues and margins, from period to period. Drivers of orders include the introduction and timing of new product or product enhancement announcements by us and our competitors, the timing of regulatory approvals, changes in price by us and our competitors as well as changes or anticipated changes in third-party reimbursement amounts or policies applicable to treatments using our products. The availability of economic stimulus packages or other government funding, or reductions thereof, may also affect timing of customer purchases. Our products have a high unit price and require significant capital expenditures by our customers. Accordingly, we experience long sales and implementation cycles, which is of greater concern during a volatile economic environment where we have had customers delay or cancel orders. The timing of when orders are placed, when installation, delivery or shipping, as applicable, is accomplished and when revenue is recognized affect our quarterly results. Further, because of the high unit price of the CyberKnife and TomoTherapy Systems and the relatively small number of units sold or installed each quarter, each sale or installation of a CyberKnife or TomoTherapy System can represent a significant percentage of our net orders, backlog or revenue for a particular quarter and shifts in sales or installation from one quarter to another may have significant effects. For example, multi-system sales or sales involving negotiations with integrated delivery networks involve additional complexities to the transaction and require a longer timeline to finalize the sale, which make it more difficult to predict the quarter in which the sale will occur. In addition, we may experience delays in orders or installations due to the impact of the COVID-19 pandemic at our customer sites. To protect the health and well-being of our employees, suppliers, and customers, we have made substantial modifications to employee travel and suspended non-essential work travel. The COVID-19 pandemic has impacted and may continue to impact our business operations, including our employees, customers and partners, and there is substantial uncertainty in the nature and degree of its continued effects over time.

Once orders are received and booked into backlog, there is a risk that we may not recognize revenue in the near term or at all. Factors that may affect whether these orders become revenue (or are cancelled or deemed aged-out and reflected as a reduction in net orders) and the timing of revenue include:

- economic or political instability, including those related to the COVID-19 pandemic;
- delays in the customer obtaining or inability of a customer to obtain funding or financing;
- delays in construction at the customer site and delays in installation;
- delays in the customer obtaining or inability of such customer to obtain local or foreign regulatory approvals such as certificates of need in certain states or Class A or Class B user licenses in China;
- timing of when we are able to recognize revenue associated with sales of the CyberKnife and TomoTherapy Systems, which varies depending upon the terms of the applicable sales and service contracts; and

- the proportion of revenue attributable to orders placed by our distributors which may be more difficult to forecast due to factors outside our control.

Our operating results may also be affected by a number of other factors, some of which are outside of our control, including:

- delays in business operations, construction at customer sites and installation, including such delays caused by the impact of the COVID-19 pandemic;
- timing and level of expenditures associated with new product development activities;
- regulatory requirements in some states for a certificate of need prior to the installation of a radiation device or foreign regulatory approvals, such as Class A or Class B user licenses in China;
- delays in shipment due, for example, to unanticipated construction delays at customer locations where our products are to be installed, cancellations by customers, natural disasters, global or regional health pandemics or epidemics, or labor disturbances;
- delays in our manufacturing processes or unexpected manufacturing difficulties;
- the timing of the announcement, introduction and delivery of new products or product upgrades by us and by our competitors;
- timing and level of expenditures associated with expansion of sales and marketing activities such as trade shows and our overall operations;
- the timing and level of expenditures associated with our financing activities;
- the effects of foreign currency adjustments;
- changes in accounting principles, such as those related to revenue recognition, or in the interpretation or the application thereof; and
- fluctuations in our gross margins and the factors that contribute to such fluctuations, as described in Management’s Discussion and Analysis of Financial Condition and Results of Operations.

Because many of our operating expenses are based on anticipated sales and a high percentage of these expenses are fixed for the short term, a small variation in the timing of revenue recognition can cause significant variations in operating results from quarter to quarter. Our overall gross margins are impacted by a number of factors described in our risk factor entitled “Our ability to achieve profitability depends in part on maintaining or increasing our gross margins on product sales and services, which we may not be able to achieve.” If our financial results fall below the expectation of securities analysts and investors, the trading price of our common stock would almost certainly decline.

We report our orders and backlog on a quarterly and annual basis. Unlike revenues, orders and backlog are not defined by U.S. GAAP, and are not within the scope of the audit conducted by our independent registered public accounting firm. Also, for the reasons discussed in Management’s Discussion and Analysis of Financial Condition and Results of Operations, our orders and backlog cannot necessarily be relied upon as accurate predictors of future revenues. Order cancellation or significant delays in installation date will reduce our backlog and future revenues, and we cannot predict if or when orders will mature into revenues. Particularly high levels of cancellations or age-outs in one or more periods may cause our revenue and gross margins to decline in current or future periods and will make it difficult to compare our operating results from quarter to quarter. We cannot assure you that our backlog will result in revenue on a timely basis or at all, or that any cancelled contracts will be replaced.

***Our industry is subject to intense competition and rapid technological change, which may result in products or new tumor treatments that are superior to the CyberKnife and TomoTherapy Systems. If we are unable to anticipate or keep pace with changes in the marketplace and the direction of technological innovation and customer demands, our products may become obsolete or less useful and our operating results will suffer.***

The medical device industry in general and the non-invasive cancer treatment field in particular are subject to intense and increasing competition and rapidly evolving technologies. Because our products often have long development and government approval cycles, we must anticipate changes in the marketplace and the direction of technological innovation and customer demands. To compete successfully, we will need to continue to demonstrate the advantages of our products and technologies over well-established alternative procedures, products and technologies, and convince physicians and other healthcare decision makers of the advantages of our products and technologies. Traditional surgery and other forms of minimally invasive procedures, brachytherapy, chemotherapy or other drugs remain alternatives to the CyberKnife and TomoTherapy Systems.

We consider the competition for the CyberKnife and TomoTherapy Systems to be existing radiation therapy systems, primarily using C-arm linacs, which are sold by large, well-capitalized companies with significantly greater market share and resources than we have. Several of these competitors are also able to leverage their fixed sales, service and other costs over multiple products or product lines. In particular, we compete with a number of existing radiation therapy equipment companies, including Varian Medical Systems, Inc. (“Varian”), which recently announced a definitive agreement to combine with Siemens Healthineers in a transaction that is expected to close in the first half of calendar year 2021, Elekta AB (“Elekta”), BrainLAB AG and ViewRay, Inc. Varian has been the leader in the external beam radiation therapy market for many years and has the majority market share for radiation therapy systems worldwide. In general, because of aging demographics and attractive market factors in oncology, we believe that new competitors will enter the radiosurgery and radiation therapy markets in the years ahead. For example, Varian announced in 2012 a new line of C-arm gantries, called the Edge systems, which Varian claims are specifically designed for radiosurgery to compete with our CyberKnife Systems. In addition, some manufacturers of conventional linac based radiation therapy systems, including Varian and Elekta, have products that can be used in combination with body and/or head frames and image guidance systems to perform both radiosurgical and radiotherapy procedures. In May 2017, Varian launched a new radiation therapy product called Halcyon which they have positioned against our TomoTherapy product line.

Furthermore, many government, academic and business entities are investing substantial resources in research and development of cancer treatments, including surgical approaches, radiation treatment, MRI-guided radiotherapy systems, proton therapy systems, drug treatment, gene therapy (which is the treatment of disease by replacing, manipulating, or supplementing nonfunctional genes) and other approaches. Successful developments that result in new approaches for the treatment of cancer could reduce the attractiveness of our products or render them obsolete.

Our future success will depend in large part on our ability to establish and maintain a competitive position in current and future technologies. Rapid technological development may render the CyberKnife and TomoTherapy Systems and their technologies obsolete. Many of our competitors have or may have greater corporate, financial, operational, sales and marketing resources, and more experience and resources in research and development than we have. We cannot assure you that our competitors will not succeed in developing or marketing technologies or products that are more effective or commercially attractive than our products or that would render our technologies and products obsolete or less useful. We may not have the financial resources, technical expertise, marketing, distribution or support capabilities to compete successfully in the future. In addition, some of our competitors may compete by changing their pricing model or by lowering the price of their products. If we are unable to maintain or increase our selling prices, our revenue and gross margins may suffer. Our success will depend in large part on our ability to maintain a competitive position with our technologies.

***International sales of our products account for a significant portion of our revenue, which exposes us to risks inherent in international operations.***

Our international sales, as a percentage of total revenue, have increased over the last five fiscal years. The percentage of our revenue derived from sales outside of the Americas region was 66% in fiscal 2020, 68% in fiscal 2019 and 64% in fiscal 2018. To accommodate our international sales, we have invested significant financial and management resources to develop an international infrastructure that will meet the needs of our customers. We anticipate that a significant portion of our revenue will continue to be derived from sales of our products in foreign markets and that the percentage of our overall revenue that is derived from these markets may continue to increase. This revenue and related operations will therefore continue to be subject to the risks associated with international operations, including:

- economic or political instability in foreign countries, including the market volatility resulting from the COVID-19 pandemic as well as the planned United Kingdom (the “UK”) exit from the European Union (the “EU”), or Brexit;
- import delays;
- changes in foreign laws and regulations governing, among other matters, the clearance, approval and sales of medical devices;
- the potential failure to comply with foreign regulatory requirements to sell and market our products;
- longer payment cycles associated with many customers outside the United States;
- inability of customers to obtain requisite government approvals, such as customers in China, including customers of the JV, obtaining one of the limited number of Class A or Class B user licenses available in order to purchase our products;
- effective compliance with privacy, data protection and information security laws, such as the European Union General Data Protection Regulation (the “GDPR”) and California Consumer Privacy Act (the “CCPA”);
- adequate coverage and reimbursement for the CyberKnife and TomoTherapy treatment procedures outside the United States;
- failure of local laws to provide the same degree of protection against infringement of our intellectual property;
- protectionist laws and business practices that favor local competitors;
- U.S. trade and economic sanctions policies that are in effect from time to time and the possibility that foreign countries may impose additional taxes, tariffs or other restrictions on foreign trade;
- trade restrictions that are in effect from time to time, including U.S. prohibitions and restrictions on exports of certain products and technologies to certain nations and customers;
- the unfamiliarity of shipping companies and other logistics providers with U.S. export control laws, which may lead to their unwillingness to ship or delays in shipping, our products to certain nations and customers despite such shipments being permitted under such laws;
- U.S. relations with the governments of the foreign countries in which we operate;
- the inability to obtain required export or import licenses or approvals;

- risks relating to foreign currency, including fluctuations in foreign currency exchange rates possibly causing fewer sales due to the strengthening of the U.S. Dollar;
- contractual provisions governed by foreign laws; and
- natural disasters, such as earthquakes and fires, and global or regional health pandemics or epidemics, such as COVID-19; or data privacy or security incidents, that may have a disproportionate effect in certain geographies resulting in decreased demand or decreased ability of our employees or employees of our customers and partners to work and travel.

Our inability to overcome these obstacles could harm our business, financial condition and operating results. Even if we are successful in managing these obstacles, our partners internationally are subject to these same risks and may not be able to manage these obstacles effectively.

In addition, future imposition of, or significant increases in, the level of customs duties, export quotas, regulatory restrictions, trade restrictions or trade prohibitions could materially harm our business.

***Enhanced international tariffs, including tariffs imposed by the United States and China that affect our products or components within our products, other trade barriers or a global trade war could increase our costs and materially and adversely affect our business operations and financial condition.***

Our global business could be negatively affected by trade barriers and other governmental protectionist measures, any of which can be imposed suddenly and unpredictably. There is currently significant uncertainty about the future relationship between the U.S. and various other countries, most significantly China, with respect to trade policies, treaties, government regulations and tariffs.

Since the beginning of 2018, there has been increasing public threats and, in some cases, legislative or executive action, from U.S. and foreign leaders regarding instituting tariffs against foreign imports of certain materials. During the last half of calendar year 2018, the federal government imposed a series of tariffs ranging from 10% to 25% on a variety of imports from China. These tariffs affect certain components, including the linear accelerator for our CyberKnife Systems, which we manufacture in China and import into the U.S., as well as other components that we import into the U.S. from our suppliers. China has responded to these tariffs with retaliatory tariffs ranging from 5% to 25% on a wide range of products from the U.S., which include certain of our products. Higher duties on existing tariffs and further rounds of tariffs have been announced or threatened by the U.S. and Chinese leaders. Although the U.S. and China signed an initial trade deal in January 2020 and China announced a one year tariff exemption for medical linear accelerators in September 2019, there is no assurance that the trade deal will be signed or that the exemption on medical linear accelerators will continue beyond one year or that we will continue to qualify for such exemption. Additionally, the U.S. has threatened to impose tariffs on goods imported from other countries, which could also impact our or our customers' operations. If these tariffs continue, if additional tariffs are placed on certain of our components or products, or if any related counter-measures are taken by China, the U.S. or other countries, our business, financial condition and results of operations may be materially harmed. The imposition of tariffs could also increase our costs and require us to raise prices on our products, which may negatively impact the demand for our products in the affected market. If we are not successful in offsetting the impact of any such tariffs, our revenue, gross margins and operating results may be adversely affected.

These tariffs are subject to a number of uncertainties as they are implemented, including future adjustments and changes. The ultimate reaction of other countries and the impact of these tariffs or other actions on the U.S., China, the global economy and our business, financial condition and results of operations, cannot be predicted at this time, nor can we predict the impact of any other developments with respect to global trade. Further, the imposition of additional tariffs by the U.S. could result in the adoption of additional tariffs by China and other countries, as well as further retaliatory actions by any affected country. Any resulting trade war could negatively impact the global market for medical devices, including radiation therapy devices, and could have a significant adverse effect on our business. These developments may have a material adverse effect on global economic conditions and the stability of global financial markets, and they may significantly reduce global trade and, in particular, trade between China and the U.S. Any of these factors could depress economic activity, restrict our access to customers and have a material adverse effect on our business, financial condition and results of operations.

***We face risks related to the current global economic environment, including risks arising in connection with the COVID-19 pandemic, which could adversely affect our business, financial condition and results of operations by, among other things, delaying or preventing our customers from obtaining financing to purchase the CyberKnife and TomoTherapy Systems and implement the required facilities to house our systems.***

Our business and results of operations are materially affected by conditions in the global markets and the economy generally. Concerns over the economic stability; the level of U.S. national debt; currency fluctuations and volatility; the rate of growth of Japan, China and other Asian economies; unemployment; the availability and cost of credit; inflation levels; trade relations; the duration and severity of the COVID-19 pandemic; energy costs and geopolitical uncertainty have contributed to increased volatility and diminished expectations for the economy and the markets.

Further, the U.S. federal government has called for, or enacted, substantial changes to healthcare, trade, fiscal, and tax policies, which may include changes to existing trade agreements and may have a significant impact on our operations. For example, the current administration has initiated the imposition of tariffs on certain foreign products, including from China, that have resulted in and may result in future retaliatory tariffs on U.S. goods and products. We cannot predict the impact, if any, that these changes could have on our business. If economic conditions worsen or new legislation is passed related to the healthcare system, trade, fiscal or tax policies, customer demand may not materialize to levels we require to achieve our anticipated financial results, which could have a material adverse effect on our business, financial condition and results of operations.

Additionally, uncertain credit markets and concerns regarding the availability of credit, including concerns related to the recent COVID-19 pandemic, could impact consumer and customer demand for our products, as well as our ability to manage normal commercial relationships with our customers, suppliers and creditors, including financial institutions. If the current situation continues to deteriorate or does not improve, our business could be negatively affected by factors such as reduced demand for our products resulting from a slow-down or volatility in the general economy, supplier or customer disruptions and/or temporary interruptions in our ability to conduct day-to-day transactions through our financial intermediaries involving the payment to or collection of funds from our customers, vendors and suppliers, and delays associated with the ongoing COVID-19 pandemic. For example, in the United States, some of our customers have been delayed in obtaining, or have not been able to obtain, necessary financing for their purchases of the CyberKnife or TomoTherapy Systems. In addition, some of our customers have been delayed in obtaining, or have not been able to obtain, necessary financing for the construction or renovation of facilities to house CyberKnife or TomoTherapy Systems, the cost of which can be substantial. These delays have in some instances led to our customers postponing the shipment and installation of previously ordered systems or cancelling their system orders, and may cause other customers to postpone their system installation or to cancel their agreements with us. An increase in delays and order cancellations of this nature would adversely affect our product sales, backlog and revenues, and therefore harm our business and results of operations. In addition, the ongoing global COVID-19 pandemic and the recent approval by the British Parliament in the UK of a referendum to leave the EU (often referred to as Brexit), has caused, and may continue to cause, uncertainty in the global markets. The risks related to the COVID-19 pandemic are discussed in more detail in our risk factor entitled “The effect of the COVID-19 pandemic, or the perception of its effects, on our operations and the operations of our customers and suppliers, could have a material adverse effect on our business, financial condition, results of operations, or cash flows.” The risks related to Brexit are discussed in more detail in our risk factor entitled “The decision of the United Kingdom to withdraw from the European Union may have a negative effect on global economic conditions, financial markets and our operations.”

***The decision of the United Kingdom to withdraw from the European Union may have a negative effect on global economic conditions, financial markets and our operations.***

On January 31, 2020, the UK withdrew from the EU and entered into a transition period to, among other things, negotiate an agreement with the EU governing the future relationship between the EU and the UK. The withdrawal of the UK from the EU has created significant uncertainty about the future relationship between the UK and the EU.

The implementation of Brexit has caused, and may continue to cause, uncertainty in the global markets. The effects of Brexit will also depend on any agreements the UK reaches to retain access to EU markets either during the transitional period or more permanently. There is significant uncertainty about the future relationship between the UK and the EU, including with respect to the laws and regulations that will apply as the UK determines which EU laws to replace or replicate after withdrawal, including those governing manufacturing, labor, environmental, data protection/privacy, competition, medical sales and advertising and other matters applicable to the medical device industry. If the UK cannot reach an agreement with the EU, it will likely have an adverse impact on labor and trade and will create further short-term currency volatility. In the absence of a future trade deal, the UK's trade with the EU and the rest of the world would be subject to tariffs and duties set by the World Trade Organization, which could result in higher importation costs for our products. In addition, the movement of goods between the UK and the remaining member states of the EU will be subject to additional inspections and documentation checks, leading to possible delays at ports of entry and departure. Moreover, currency volatility could drive a weaker pound which could result in a decrease in the profitability of our sales in the UK. Any adjustments we make to our business and operations as a result of Brexit could result in significant expense and take significant time to complete.

While we have not experienced any material financial impact from Brexit on sales within the UK to date, we cannot predict its future implications. The full withdrawal of the UK from the EU will take some period of time to complete and could result in changes that impact our business, including potentially requiring us to obtain new registrations for our products that are sold into the UK. Any impact from Brexit on our business and operations over the long term will depend, in part, on the outcome of tariff, tax treaties, trade, regulatory and other negotiations the UK conducts as well as its enactment, interpretation and enforcement of new laws and regulations, such as the UK Data Protection Act, which substantially implements the GDPR in the UK, and other UK data protection laws or regulations that may develop in the medium to longer term, affecting matters such as data transfers to and from the UK. We continue to monitor and review the impact of any resulting changes to EU or UK law that could affect our operations.

***If we encounter manufacturing problems, or if our manufacturing facilities do not continue to meet federal, state or foreign manufacturing standards, we may be required to temporarily cease all or part of our manufacturing operations, which would result in delays and lost revenue.***

The CyberKnife and TomoTherapy Systems are complex and require the integration of a number of components from several sources of supply. We must manufacture and assemble these complex systems in commercial quantities in compliance with regulatory requirements and at an acceptable cost. Our linear accelerator components are extremely complex devices and require significant expertise to manufacture, and we may encounter difficulties in scaling up production of the CyberKnife or TomoTherapy Systems, including problems with quality control and assurance, component supply shortages, increased costs, shortages of qualified personnel, the long lead time required to develop additional radiation-shielded facilities for purposes of testing our products and/or difficulties associated with compliance with local, state, federal and foreign regulatory requirements. In addition, the COVID-19 pandemic may impact the supply of key components such that we may not receive them in a timely manner, in sufficient quantities, or at reasonable cost. We may also experience limitations in the availability of qualified personnel as a result of shelter-in-place rules, quarantine requirements, or illness. If our manufacturing capacity does not keep pace with product demand, we will not be able to fulfill orders in a timely manner, which in turn may have a negative effect on our financial results and overall business. Conversely, if demand for our products decreases, the fixed costs associated with excess manufacturing capacity may adversely affect our financial results.

Our manufacturing processes and the manufacturing processes of our third-party suppliers are required to comply with the FDA's Quality System Regulations ("QSR") for any products imported into, or sold within, the U.S. The QSR is a complex regulatory scheme that covers the methods and documentation of the design, testing, production process and controls, manufacturing, labeling, quality assurance, packaging, storage and shipping of our products. Furthermore, we are required to verify that our suppliers maintain facilities, procedures and operations that comply with our quality requirements. We are also subject to state licensing and other requirements and licenses applicable to manufacturers of medical devices, and we are required to comply with International Organization for Standardization ("ISO"), quality system standards in order to produce products for sale in Europe and Canada, as well as various other foreign laws and regulations. Because our manufacturing processes include the production of diagnostic and therapeutic X-ray equipment and laser equipment, we are subject to the electronic product radiation control provisions of the Federal Food, Drug and Cosmetic Act, which requires that we file reports with the FDA, applicable states and our customers regarding the distribution, manufacturing and installation of these types of

equipment. The FDA enforces the QSR and the electronic product radiation control provisions through periodic inspections, some of which may be unannounced. We have been, and anticipate in the future being subject to such inspections. FDA inspections usually occur every two to three years. During such inspections, the FDA may issue Inspectional Observations on Form FDA 483, listing instances where the manufacturer has failed to comply with applicable regulations and procedures, or warning letters.

If a manufacturer does not adequately address the observations, the FDA may take enforcement action against the manufacturer, including the imposition of fines, restriction of the ability to export product, total shutdown of production facilities and criminal prosecution. If we or a third-party supplier receive a Form FDA 483 with material or major observations that are not promptly corrected, fail to pass a QSR inspection, or fail to comply with these, ISO and other applicable regulatory requirements, our operations could be disrupted and our ability to generate sales could be delayed. Our failure to take prompt and satisfactory corrective action in response to an adverse inspection or our failure to comply with applicable standards could result in enforcement actions, including a public warning letter, a shutdown of our manufacturing operations, a recall of our products, civil or criminal penalties, or other sanctions, which would cause our sales and business to suffer. In addition, because some foreign regulatory approvals are based on approvals or clearances from the FDA, any failure to comply with FDA requirements may also disrupt our sales of products in other countries. We cannot assure you that the FDA or other governmental authorities would agree with our interpretation of applicable regulatory requirements or that we or our third-party suppliers have in all instances fully complied with all applicable requirements. If any of these events occur, our reputation could be harmed, we could lose customers and there could be a material adverse effect on our business, financial condition and results of operations.

If we cannot achieve the required level and quality of production, we may need to outsource production or rely on licensing and other arrangements with third parties who possess sufficient manufacturing facilities and capabilities in compliance with regulatory requirements. Even if we could outsource needed production or enter into licensing or other third-party arrangements, this could reduce our gross margin and expose us to the risks inherent in relying on others. We also cannot assure you that our suppliers will deliver an adequate supply of required components on a timely basis or that they will adequately comply with the QSR. Failure to obtain these components on a timely basis would disrupt our manufacturing processes and increase our costs, which would harm our operating results.

***If we are unable to develop new products or enhance existing products to meet our customers' needs and compete favorably in the market, we may be unable to attract or retain customers.***

Our success depends on the successful development, regulatory clearance or approval, introduction and commercialization of new generations of products, treatment systems, and enhancements to and/or simplification of existing products that will meet our customers' needs provide novel features and compete favorably in the market. The CyberKnife and TomoTherapy Systems, which are currently our principal products, are technologically complex and must keep pace with, among other things, the products of our competitors and new technologies. We are making significant investments in long-term growth initiatives. Such initiatives require significant capital commitments, involvement of senior management and other investments on our part, which we may be unable to recover. Our timeline for the development of new products or enhancements may not be achieved and price and profitability targets may not prove feasible. Commercialization of new products may prove challenging, and we may be required to invest more time and money than expected to successfully introduce them. Once introduced, new products may adversely impact orders and sales of our existing products, or make them less desirable or even obsolete. Compliance with regulations, competitive alternatives, and shifting market preferences may also impact the successful implementation of new products or enhancements. Our inability to develop, gain regulatory approval for or supply competitive products to the market as quickly and effectively as our competitors could limit market acceptance of our products and reduce our sales.

Our ability to successfully develop and introduce new products, treatment systems and product enhancements and simplifications, and the revenues and costs associated with these efforts, will be affected by our ability to:

- properly identify and address customer needs;
- prove feasibility of new products in a timely manner;
- educate physicians about the use of new products and procedures;

- comply with internal quality assurance systems and processes timely and efficiently;
- manage the timing and cost of obtaining regulatory approvals or clearances;
- accurately predict and control costs associated with inventory overruns caused by phase-in of new products and phase-out of old products;
- price new products competitively;
- manufacture and deliver our products in sufficient volumes on time and accurately predict and control costs associated with manufacturing, installation, warranty and maintenance of the products;
- meet our product development plan and launch timelines;
- improve manufacturing yields of components; and
- manage customer demands for retrofits of both old and new products.

Even if customers accept new products or product enhancements, the revenues from these products may not be sufficient to offset the significant costs associated with making them available to customers.

We cannot be sure that we will be able to successfully develop, obtain regulatory approval or clearance for, manufacture or introduce new products, treatment systems or enhancements, the roll-out of which involves compliance with complex quality assurance processes, including QSR. Failure to obtain regulatory approval or clearance for our products or to complete these processes in a timely and efficient manner could result in delays that could affect our ability to attract and retain customers, or could cause customers to delay or cancel orders, causing our backlog, revenues and operating results to suffer.

***If we do not effectively manage our growth, our business may be significantly harmed.***

In order to implement our business strategy, we expect continued growth in our infrastructure requirements, particularly as we expand into new and growing markets as well as expand our manufacturing capacities and sales and marketing capabilities. To manage our growth, we must expand our facilities, augment our management, operational and financial systems, hire and train additional qualified personnel, scale-up our manufacturing capacity and expand our marketing and distribution capabilities, all of which will be more difficult to accomplish the longer that our employees must work remotely from home. Our manufacturing, assembly and installation process is complex and occurs over many months and we must effectively scale this entire process to satisfy customer expectations and changes in demand. Further, to accommodate our growth and compete effectively, we will be required to make improvements to our business operations. We cannot be certain that our personnel, systems, procedures and internal controls will be adequate to support our future operations and any expansion of our systems and infrastructure may require us to commit significant additional financial, operational and management resources. If we cannot manage our growth effectively, our business will suffer.

***We could become subject to product liability claims, product recalls, other field actions and warranty claims that could be expensive, divert management's attention and harm our business.***

Our business exposes us to potential liability risks that are inherent in the manufacturing, marketing, sale, installation, servicing, and support of medical device products. We may be held liable if a CyberKnife or TomoTherapy System or our Precision Treatment Planning or iDMS Data Management System software causes or contributes to injury or death or is found otherwise unsuitable during usage. Our products incorporate sophisticated components and computer software. Complex software can contain errors, particularly when first introduced. In addition, new products or enhancements may contain undetected errors or performance problems that, despite testing, are discovered only after installation. Because our products are designed to be used to perform complex surgical and therapeutic procedures involving delivery of radiation to the body, defects, even if small, could result in a number of complications, some of which could be serious and could harm or kill patients. Any alleged weaknesses in physician training and services associated with our products may result in unsatisfactory patient outcomes and product liability lawsuits. It is also possible that defects in the design, manufacture or labeling of our products might

necessitate a product recall or other field corrective action, which may result in warranty claims beyond our expectations and may harm our reputation and create adverse publicity. A product liability claim, regardless of its merit or eventual outcome, could result in significant legal defense costs that may not be covered by insurance and be time-consuming to defend. We may also be subject to claims for personal injury, property damage or economic loss related to, or resulting from, any errors or defects in our products, or the installation, servicing and support of our products, or any professional services rendered in conjunction with our products. Adverse publicity related to any product liability actions may cause patients to be less receptive to radiation therapy generally or our products specifically and could also result in additional regulation that could adversely affect our ability to promote, manufacture and sell our products. The coverage limits of our insurance policies may not be adequate to cover future claims. If sales of our products increase or we suffer future product liability claims, we may be unable to maintain product liability insurance in the future at satisfactory rates or with adequate amounts of coverage. A product liability claim, any product recalls or other field actions or excessive warranty claims, whether arising from defects in design or manufacture or labeling, could negatively affect our sales or require a change in the design, manufacturing process or the indications for which our systems or software may be used, any of which could harm our reputation and business and result in a decline in revenue.

In addition, if a product we designed or manufactured is defective, whether because of design or manufacturing, supplied parts, or labeling defects, improper use of the product or other reasons, we may be required to notify regulatory authorities and/or to recall the product, possibly at our expense. We have voluntarily initiated recalls and other product corrections in the past. In fiscal year 2020, we have voluntarily opened one recall involving the Radixact Treatment Delivery System that was reported to the FDA, which has been completed. Additionally, we have completed and requested closure with the FDA for the remaining two open recalls reported on the CyberKnife System from fiscal year 2019. We are committed to the safety and precision of our products and while no serious adverse health consequences have been reported in connection with these recalls and the costs associated with each such recall were not material, we cannot ensure that the FDA will not require that we take additional actions to address problems that resulted in previous recalls or that similar or more significant product recalls will not occur in the future. A required notification of a correction or removal to a regulatory authority or recall could result in an investigation by regulatory authorities of our products, which could in turn result in required recalls, restrictions on the sale of the products or other civil or criminal penalties. The adverse publicity resulting from any of these actions could cause customers to review and potentially terminate their relationships with us. These investigations, corrections or recalls, especially if accompanied by unfavorable publicity, patient injury or termination of customer contracts, could result in incurring substantial costs, losing revenues and damaging our reputation, each of which would harm our business.

***Our reliance on single-source suppliers for critical components of the CyberKnife and TomoTherapy Systems could harm our ability to meet demand for our products in a timely and cost effective manner.***

We currently depend on single-source suppliers for some of the critical components necessary to assemble the CyberKnife and TomoTherapy Systems, including, with respect to the CyberKnife System, the robot, couch and magnetron and, with respect to the TomoTherapy Systems, the ring gantry, couch, solid state modulator and magnetron. If any single-source supplier was to cease delivering components to us or fail to provide the components to our specifications and on a timely basis, we might be required to find alternative sources for these components. The disruption or termination of the supply of components could cause a significant increase in the costs of these components, which could affect our results of operations. In some cases, alternative suppliers may be located in the same geographic area as existing suppliers, and are thus subject to the same economic, political and geographic factors that may affect existing suppliers to meet our demand. We may have difficulty or be unable to find alternative sources for these components. As a result, we may be unable to meet the demand for the CyberKnife or TomoTherapy Systems, which could harm our ability to generate revenue and damage our reputation. Even if we do find alternate suppliers, we will be required to qualify any such alternate suppliers and we would likely experience a lengthy delay in our manufacturing processes or a cessation in production, which would result in delays of shipment to end users. We cannot assure you that our single-source suppliers will be able or willing to meet our future demands.

We generally do not maintain large volumes of inventory, which makes us even more susceptible to harm if a single-source supplier fails to deliver components on a timely basis. Furthermore, if we are required to change the manufacturer of a critical component of the CyberKnife or TomoTherapy Systems, we will be required to verify that the new manufacturer maintains facilities, procedures and operations that comply with our quality and applicable regulatory requirements and guidelines, which could further impede our ability to manufacture our products in a

timely manner. If the change in manufacturer results in a significant change to the product, a new 510(k) clearance would be necessary, which would likely cause substantial delays. In addition, we have experienced delays in obtaining components and materials from suppliers as a result of the impact of the COVID-19 pandemic. The disruption or termination of the supply of key components for the CyberKnife or TomoTherapy Systems could harm our ability to manufacture our products in a timely manner or within budget, harm our ability to generate revenue, lead to customer dissatisfaction and adversely affect our reputation and results of operations.

***We depend on key employees, the loss of whom would adversely affect our business. If we fail to attract and retain employees with the expertise required for our business, we may be unable to continue to grow our business.***

We are highly dependent on the members of our senior management, sales, marketing, operations and research and development staff. Our future success will depend in part on our ability to retain our key employees and to identify, hire and retain additional personnel. Competition for qualified personnel in the medical device industry is intense and finding and retaining qualified personnel with experience in our industry is very difficult. We believe there are only a limited number of individuals with the requisite skills to serve in many of our key positions and we face significant competition for key personnel and other employees, particularly in the San Francisco Bay Area where our headquarters is located, from other medical equipment and software manufacturers, technology companies, universities and research institutions. As a result, we may not be able to retain our existing employees or hire new employees quickly enough to meet our needs. Moreover, we have in the past conducted reductions in force in order to optimize our organizational structure and reduce costs, and certain senior personnel have also departed for various reasons. At the same time, we may face high turnover, requiring us to expend time and resources to source, train and integrate new employees. The challenging markets in which we compete for talent may also require us to invest significant amounts of cash and equity to attract and retain employees. In addition, a significant portion of our compensation to our key employees is in the form of stock related grants. A prolonged depression in our stock price could make it difficult for us to retain our key and other employees and recruit additional qualified personnel and we may have to pay additional compensation to employees to incentivize them to join or stay with us. Further, the COVID-19 pandemic has impacted and may continue to impact our business operations, including our employees, customers and partners, and there is substantial uncertainty in the nature and degree of its continued effects over time. We do not maintain, and do not currently intend to obtain, key employee life insurance on any of our personnel. If we fail to hire and retain key personnel and other employees, we may be unable to continue to grow our business successfully.

***Disruption of critical information technology systems, infrastructure and data or cyberattacks could harm our business and financial condition.***

Information technology helps us operate more efficiently, interface with customers, maintain financial accuracy and efficiency and accurately produce our financial statements. If we do not allocate and effectively manage the resources necessary to build, sustain and secure the proper technology infrastructure, we could be subject to transaction errors, processing inefficiencies, the loss of customers, business disruptions or the loss of or damage to intellectual property through a security breach or cyberattack. Such security breaches or cyberattacks could expose us to a risk of lost or corrupted information, unauthorized disclosure of information, unauthorized disclosure of information, litigation and possible liability to employees, customers and regulatory authorities. In addition, we have moved some of our data and information to a cloud computing system, where applications and data are hosted, accessed and processed through a third-party provider over a broadband internet connection. In a cloud computing environment, we could be subject to outages, security breaches and cyberattacks by the third-party service provider. In the current COVID-19 pandemic, more of our personnel and the personnel of our service providers are working remotely, which increases the risks of security breaches and cyberattacks.

If our data management systems do not effectively collect, store, process and report relevant data for the operation of our business, whether due to equipment malfunction or constraints, software deficiencies, computer viruses, security breaches, cyberattacks, catastrophic events or human error, our ability to effectively plan, forecast and execute our business plan and comply with applicable laws and regulations will be impaired, perhaps materially. Any such impairment could materially and adversely affect our financial condition, results of operations, cash flows and the timeliness with which we internally and externally report our operating results. As a result, our information systems require an ongoing commitment of significant resources to maintain, protect, and enhance existing systems

and develop new systems to keep pace with continuing changes in information processing technology, evolving legal and regulatory standards, the increasing need to protect patient and customer information, and the information technology needs associated with our changing products and services. There can be no assurance that our process of consolidating the number of systems we operate, upgrading and expanding our information systems capabilities, continuing to build security into the design of our products, protecting and enhancing our systems and developing new systems to keep pace with continuing changes in information processing technology will be successful or that additional systems issues will not arise in the future.

In addition, data privacy breaches from errors, malfeasance or misconduct by employees, contractors or others with permitted access to our systems may pose a risk that sensitive data, including individually identifiable data, may be exposed to unauthorized person or to the public and may compromise our security systems. There can be no assurance that any efforts we make to prevent against such data privacy breaches will prevent breakdowns or breaches in our systems that could adversely affect our business. Third parties may also attempt to fraudulently induce employees or customers into disclosing user names, passwords or other sensitive information, which may in turn be used to access our information technology systems. For example, our employees have received in the past and likely will continue to receive “phishing” e-mails attempting to induce them to divulge sensitive information. In addition, unauthorized persons may attempt to hack into our products or systems to obtain personal data relating to patients or employees, our confidential or proprietary information or confidential information we hold on behalf of third parties, which, if successful, could pose a risk of loss of data, risk to patient safety and risk of product recall. As the techniques used to obtain unauthorized access to our systems change frequently and may be difficult to detect, we may not be able to anticipate and prevent these intrusions or mitigate them when they occur. Moreover, we manufacture and sell hardware and software products that allow our customers to store confidential information about their patients. Both types of products are often connected to and reside within our customers’ information technology infrastructures. We do not have measures to configure or secure our customers’ equipment or any information stored in our customers’ systems or at their locations, which is the responsibility of our customers. While we have implemented security measures to protect our hardware and software products from unauthorized access and cyberattacks, these measures may not be effective in securing these products, particularly since techniques used to obtain unauthorized access, or to sabotage systems, change frequently and may not be recognized until launched against a target. A breach of network security and systems or other events that cause the loss or public disclosure of, or access by third parties to, sensitive information stored by us or our customers, or the perception that any of these have occurred, could have serious negative consequences for our business, including loss of information, indemnity obligations, possible fines, penalties and damages, reduced demand for our products and services, an unwillingness of our customers to use our products or services, harm to our reputation and brand, and time-consuming and expensive litigation, any of which could have an adverse effect on our financial results.

***Any actual or perceived failure by us to comply with legal or regulatory requirements related to privacy, cyber security and data protection in one or multiple jurisdictions could result in proceedings, actions or penalties against us.***

There are numerous state, federal and foreign laws, regulations, decisions and directives regarding privacy and the collection, storage, transmission, use, processing, disclosure and protection of personally identifiable information and other personal, customer or other data, the scope of which is continually evolving and subject to differing interpretations. Our worldwide operations mean that we are subject to privacy, cyber security and data protection laws and regulations in many jurisdictions, and that some of the data we process, store and transmit may be transmitted across countries. For example, in the U.S., Health Insurance Portability and Accountability Act (“HIPAA”) privacy and security rules require us as a business associate to protect the confidentiality of patient health information, and the Federal Trade Commission has consumer protection authority, including regarding privacy and cyber security. In Europe, the GDPR, which went into effect in May 2018, imposes several stringent requirements for controllers and processors of personal data that will increase our obligations and, in the event of violations, may impose significant fines of up to the greater of 4% of worldwide annual revenue or €20 million. In the UK, a Data Protection Bill that substantially implements the GDPR became law in May 2018.

Data transfer and localization requirements related to personally identifiable information also appear to be increasing and becoming more complex. With regard to transfers to the U.S. of personal data (as such term is used in the GDPR and applicable EU member state legislation, and as similarly defined under the proposed ePrivacy Regulation) from our employees and European customers and users, both the U.S.-EU Privacy Shield and EU Model Clauses have been subject to legal challenge. Further, in July 2020, the Court of Justice of the European Union released a decision in the Schrems II case (Data Protection Commissioner v. Facebook Ireland, Schrems), declaring

the EU-US Privacy Shield invalid. Although the Court considers that the Commission Decision 2019/87 on data transfers carried out under the European Commission's Standard Contractual Clauses valid, we may face additional scrutiny from EU regulators on how, in practices, the transfer of personal data from the EU to the U.S. takes place under the established mechanisms. China and Russia have also passed laws that require individually identifiable data on their citizens to be maintained on local servers and that may restrict transfer or processing of that data. Further, the United States, citing a "national emergency with respect to its information and communications technology and services supply chain," on August 6, 2020 issued sanctions against TikTok and WeChat on national security, foreign policy, and economic grounds. Effectively, this executive order may function as a ban of TikTok and WeChat for use by consumers in the United States over the long term because of national security concerns regarding the transfer of personally identifiable information from the United States to China. In 2019, an executive order citing similar national security risks in the telecommunications sector served to block US companies from buying Chinese-made Huawei and ZTE products. If our operations, including those involving the processing of U.S.-collected data such as medical imagery, through the JV in China, come to be perceived as a U.S. national security risk, those operations may become subject to a similar executive order and sanctions. Any ban or other restriction on our transfer of data to the JV in China may increase costs as we seek operational and data processing alternatives.

New and proposed privacy, cybersecurity, and data protection laws are also providing new rights to individuals and increasing the penalties associated with non-compliance. For example, the California Consumer Privacy Act of 2018 (the "CCPA"), which went into effect in January 2020, imposes stringent data privacy and data protection requirements for the data of California residents, and provides for penalties for noncompliance of up to \$7,500 per violation, as well as a private right of action from individuals in relation to certain security breaches. The enforcement of the CCPA by the California Attorney General on July 1, 2020. We cannot fully predict the impact of the CCPA on our business or operations, but it may require us to modify our data processing practices and policies and to incur substantial costs and expenses in an effort to comply. Additionally, a new privacy law, the California Privacy Rights Act ("CPRA"), recently was certified by the California Secretary of State to appear on the ballot for the November 3, 2020 election. If this initiative is approved by California voters, the CPRA would significantly modify the CCPA, potentially resulting in further uncertainty and requiring us to incur additional costs and expenses in an effort to comply. The enactment of the CCPA is prompting a wave of similar legislative developments in other states in the U.S., which could create the potential for a patchwork of overlapping but different state laws. The restrictions imposed by these laws and regulations may limit the use and adoption of our products, reduce overall demand for our products, require us to modify our data handling practices and impose additional costs and burdens, including risks of regulatory fines, litigation and associated reputational harm. In addition, U.S. and international laws that have been applied to protect user privacy (including laws regarding unfair and deceptive practices in the U.S. and GDPR in the EU) may be subject to evolving interpretations or applications in light of privacy developments. As a result, we may be subject to significant consequences, including penalties and fines, for any failure to comply with such laws, regulations and directives.

Privacy, cyber security and data protection legislation around the world is comprehensive and complex and there has been a recent trend towards more stringent enforcement of requirements regarding protection and confidentiality of personal data. The restrictions imposed by such laws and regulations may limit the use and adoption of our products and services, reduce overall demand for our products and services, require us to modify our data handling practices and impose additional costs and burdens. With increasing enforcement of privacy, cyber security and data protection laws and regulations, there is no guarantee that we will not be subject to enforcement actions by governmental bodies or that our costs of compliance will not increase significantly. Enforcement actions can be costly and interrupt regular operations of our business. In addition, there has been a developing trend of civil lawsuits and class actions relating to breaches of consumer data held by large companies. While we have not been named in any such suits, if a substantial breach or loss of data from our records were to occur, we could become a target of such litigation. Any inability to adequately address privacy and security concerns, even if unfounded, or comply with applicable laws, regulations, policies, industry standards, contractual obligations or other legal obligations could result in additional cost and liability to us, damage our reputation, inhibit sales and adversely affect our business. Our failure to comply with applicable laws and regulations could result in enforcement action against us, including fines and public censure, claims for damages by customers and other affected individuals, damage to our reputation and loss of goodwill (both in relation to existing customers and prospective customers), any of which could harm our business, results of operations and financial condition.

***If third-party payors do not provide sufficient coverage and reimbursement to healthcare providers for use of the CyberKnife and TomoTherapy Systems or if the number of patients covered by health insurance reduces, demand for our products and our revenue could be adversely affected.***

Our customers rely significantly on reimbursement from public and private third party payors for CyberKnife and TomoTherapy systems procedures. Our ability to commercialize our products successfully and increase market acceptance of our products will depend in significant part on the extent to which public and private third party payors provide adequate coverage and reimbursement for procedures that are performed with our products and the extent to which patients that are treated by our products continue to be covered by health insurance. Third party payors may establish or change the reimbursement for medical products and services that could significantly influence the purchase of medical products and services. In addition, actions by the government, downturns in the economy and other factors outside of our control could negatively affect the number of individuals covered by health insurance. For example, in connection with coronavirus-related layoffs, many individuals have lost their employer-covered health insurance and there is uncertainty as to when or if such coverage will be re-established. If reimbursement policies or other cost containment measures are instituted in a manner that significantly reduces the coverage or payment for the procedures that are performed with our products or if there is a prolonged reduction in the number of patients eligible to be treated by our products that are covered by health insurance, our revenue may decline, our existing customers may not continue using our products or may decrease their use of our products, and we may have difficulty obtaining new customers. Such actions would likely have a material adverse effect on our operating results.

In addition, the Centers for Medicare and Medicaid Services (“CMS”) reviews reimbursement rates annually and may implement significant changes in future years, which could discourage existing and potential customers from purchasing or using our products. Further, outside of the U.S., reimbursement practices vary significantly by country. Market acceptance of our products may depend on the availability and level of coverage and reimbursement in any country within a particular time.

***The safety and efficacy of our products for certain uses is not yet supported by long-term clinical data, and our products may therefore prove to be less safe and effective than initially thought.***

Although we believe that the CyberKnife and TomoTherapy Systems have advantages over competing products and technologies, we do not have sufficient clinical data demonstrating these advantages for all tumor indications. In addition, we have only limited five-year patient survival rate data, which is a common long-term measure of clinical effectiveness in cancer treatment. We also have limited clinical data directly comparing the effectiveness of the CyberKnife System to other competing systems. Future patient studies or clinical experience may indicate that treatment with the CyberKnife System does not improve patient survival or outcomes.

Likewise, because the TomoTherapy Systems have only been on the market since 2003, we have limited complication or patient survival rate data with respect to treatment using the systems. In addition, while the effectiveness of radiation therapy is well understood, there is a growing but still limited number of peer-reviewed medical journal publications regarding the efficacy of highly conformal treatment such as that delivered by the TomoTherapy Systems. If future patient studies or clinical experience do not support our beliefs that the TomoTherapy Systems offer a more advantageous treatment for a wide variety of cancer types, use of the systems could fail to increase or could decrease, and our business would therefore be adversely affected.

Such results could reduce the rate of reimbursement by both public and private third-party payors for procedures that are performed with our products, slow the adoption of our products by physicians, significantly reduce our ability to achieve expected revenues and could prevent us from becoming profitable. In addition, if future results and experience indicate that our products cause unexpected or serious complications or other unforeseen negative effects, the FDA could rescind our clearances, our reputation with physicians, patients and others may suffer and we could be subject to significant legal liability.

***We rely on third parties to perform spare parts shipping and other logistics functions on our behalf. A failure or disruption at our logistics providers would adversely impact our business.***

Customer service is a critical element of our sales strategy. Third-party logistics providers store most of our spare parts inventory in depots around the world and perform a significant portion of our spare parts logistics and shipping activities. If any of our logistics providers terminates its relationship with us, suffers an interruption in its business, significantly increases fees for services or experiences delays, disruptions or quality control problems in its operations, or we have to change and qualify alternative logistics providers for our spare parts, shipments of spare parts to our customers may be delayed or at a higher cost and our reputation, business, financial condition and results of operations may be adversely affected.

***Third parties may claim we are infringing their intellectual property, and we could suffer significant litigation or licensing expenses or be prevented from selling our product.***

The medical device industry is characterized by a substantial amount of litigation over patent and other intellectual property rights. In particular, the field of radiation treatment of cancer is well established and crowded with the intellectual property of competitors and others. We also expect that other participants will enter the field. A number of companies in our market, as well as universities and research institutions, have issued patents and have filed patent applications which relate to the use of radiation therapy and stereotactic radiosurgery to treat cancerous and benign tumors.

Determining whether a product infringes a patent involves complex legal and factual issues, and the outcome of patent litigation actions is often uncertain. We have not conducted an extensive search of patents issued to third parties, and no assurance can be given that third-party patents containing claims covering our products, parts of our products, technology or methods do not exist, have not been filed, or could not be filed or issued. Because of the number of patents issued and patent applications filed in our technical areas or fields, our competitors or other third parties may assert that our products and the methods we employ in the use of our products are covered by U.S. or foreign patents held by them.

In addition, because patent applications can take many years to issue and because publication schedules for pending applications vary by jurisdiction, there may be applications now pending of which we are unaware, and which may result in issued patents which our current or future products infringe. Also, because the claims of published patent applications can change between publication and patent grant, there may be published patent applications that may ultimately issue with claims that we infringe. There could also be existing patents that one or more of our products or parts may infringe and of which we are unaware. As the number of competitors in the market for less invasive cancer treatment alternatives grows, and as the number of patents issued in this area grows, the possibility of patent infringement claims against us increases. Regardless of the merit of infringement claims, they can be time-consuming and result in costly litigation and diversion of technical and management personnel. Some of our competitors may be able to sustain the costs of complex patent litigation more effectively than we can because they have substantially greater resources. In addition, any uncertainties resulting from the initiation and continuation of any litigation could have a material adverse effect on our ability to raise funds, if necessary, to continue our operations.

In the event that we become subject to a patent infringement or other intellectual property lawsuit and if the relevant patents or other intellectual property were upheld as valid and enforceable and we were found to infringe or violate the terms of a license to which we are a party, we could be prevented from selling our products unless we obtain a license or are able to redesign the product to avoid infringement. Required licenses may not be made available to us on acceptable terms or at all. If we are unable to obtain a license or successfully redesign our system, we might be prevented from selling such system. If there is an allegation or determination that we have infringed the intellectual property rights of a competitor or other person, we may be required to pay damages, pay ongoing royalties or otherwise settle such matter upon terms that are unfavorable to us. In these circumstances, we may be unable to sell our products at competitive prices or at all, and our business and operating results could be harmed.

***We may be subject to claims that our employees have wrongfully used or disclosed alleged trade secrets of their former employers.***

As is common in the medical device industry, we employ individuals who were previously employed at other medical equipment or biotechnology companies, including our competitors or potential competitors. We may be subject to claims that we or those employees have inadvertently or otherwise used or disclosed trade secrets or other proprietary information of their former employers. Litigation may be necessary to defend against these claims. If we fail in defending any such claims, in addition to paying monetary damages, we may lose valuable intellectual property rights or personnel. Even if we are successful in defending against claims of this nature, litigation could result in substantial costs and be a distraction to management.

***It is difficult and costly to protect our intellectual property and our proprietary technologies and we may not be able to ensure their protection.***

Our success depends significantly on our ability to obtain, maintain and protect our proprietary rights to the technologies used in our products. Patents and other proprietary rights provide uncertain protections, and we may be unable to protect our intellectual property. For example, we may be unsuccessful in defending our patents and other proprietary rights against third-party challenges. As key patents expire, our ability to prevent competitors from copying our technology may be limited. In addition, patent reform legislation or precedent could increase the uncertainties and costs surrounding the prosecution of our patent applications and the enforcement or defense of our issued patents.

In addition to patents, we rely on a combination of trade secrets, copyright and trademark laws, nondisclosure agreements and other contractual provisions and technical security measures to protect our intellectual property rights. These measures may not be adequate to safeguard the technology underlying our products, including in case of a security breach involving our intellectual property. If these measures do not protect our rights adequately, third parties could use our technology, and our ability to compete in the market would be reduced. Although we have attempted to obtain patent coverage for our technology where available and appropriate, there are aspects of the technology for which patent coverage was never sought or never received. There also may be countries in which we sell or intend to sell the CyberKnife or TomoTherapy Systems but have no patents or pending patent applications. Our ability to prevent others from making or selling duplicate or similar technologies will be impaired in those countries in which we have no patent protection. Although we have several issued patents in the U.S. and in foreign countries protecting aspects of the CyberKnife and TomoTherapy Systems, our pending U.S. and foreign patent applications may not issue, may issue only with limited coverage or may issue and be subsequently successfully challenged by others and held invalid or unenforceable. In addition, many countries limit the enforceability of patents against certain third parties, including government agencies or government contractors. In these countries, patents may provide limited or no benefit. Patent protection must ultimately be sought on a country-by-country basis, which is an expensive and time consuming process with uncertain outcomes. Accordingly, we may choose not to seek patent protection in certain countries, and we will not have the benefit of patent protection in such countries.

Similarly, our issued patents and those of our licensors may not provide us with any competitive advantages. Competitors may be able to design around our patents or develop products which provide outcomes comparable or superior to ours. Our patents may be held invalid or unenforceable as a result of legal challenges by third parties, and others may challenge the inventorship or ownership of our patents and pending patent applications. In addition, the laws of some foreign countries, such as China where the JV will operate, may not protect our intellectual property rights to the same extent as do the laws of the United States and, even if they do, uneven enforcement and procedural barriers may exist in such countries. In the event a competitor or other third party infringes upon our patent or other intellectual property rights or otherwise misappropriates such rights, enforcing those rights may be difficult and time consuming. Even if successful, litigation to enforce our intellectual property rights or to defend our patents against challenge could be expensive and time consuming and could divert our management's attention from our core business. Damage awards resulting from successful litigation in foreign jurisdictions may not be in amounts commensurate with damage awards in the U.S. We may not have sufficient resources to enforce our intellectual property rights or to defend our patents against a challenge. In addition, we may not prevail in any lawsuits that we initiate, and the damages or other remedies awarded, if any, may not be commercially valuable. Litigation also puts our patents at risk of being invalidated or interpreted narrowly and our patent applications at risk of not issuing. Additionally, we may provoke third parties to assert claims against us.

We also license patent and other proprietary rights to aspects of our technology to third parties in fields where we currently do not operate as well as in fields where we currently do operate. Disputes with our licensees may arise regarding the scope and content of these licenses. Further, our ability to expand into additional fields with our technologies may be restricted by our existing licenses or licenses we may grant to third parties in the future.

Additionally, we have written agreements with collaborators regarding the ownership of intellectual property arising from our collaborations. These agreements generally provide that we must negotiate certain commercial rights with collaborators with respect to joint inventions or inventions made by our collaborators that arise from the results of the collaboration. In some instances, there may not be adequate written provisions to address clearly the resolution of intellectual property rights that may arise from a collaboration. If we cannot successfully negotiate sufficient ownership and commercial rights to the inventions that result from our use of a third-party collaborator's materials where required, or if disputes otherwise arise with respect to the intellectual property developed with the use of a collaborator's technology, we may be limited in our ability to utilize these intellectual property rights. In addition, we may face claims by third parties that our agreements with employees, contractors or consultants obligating them to assign intellectual property to us are ineffective or in conflict with prior or competing contractual obligations of assignment, which could result in ownership disputes regarding intellectual property we have developed or will develop and interfere with our ability to capture the commercial value of such intellectual property. Litigation may be necessary to resolve an ownership dispute, and if we are not successful, we may be precluded from using certain intellectual property or may lose our exclusive rights in that intellectual property. Either outcome could harm our business.

The policies and procedures we have in place to protect our trade secrets may not be effective in preventing misappropriation of our trade secrets by others. In addition, confidentiality agreements executed by our employees, consultants and advisors may not be enforceable or may not provide meaningful protection for our trade secrets or other proprietary information in the event of unauthorized use or disclosure. Litigating a trade secret claim is expensive and time consuming, and the outcome is unpredictable. In addition, courts outside the United States are sometimes less willing to protect trade secrets. Moreover, our competitors may independently develop equivalent knowledge methods and know-how. If we are unable to protect our intellectual property rights, we may be unable to prevent competitors from using our own inventions and intellectual property to compete against us and our business may be harmed.

***Unfavorable results of legal proceedings could materially and adversely affect our financial condition.***

We are and may become a party to legal proceedings, claims and other legal matters in the ordinary course of business or otherwise. These legal proceedings, claims and other legal matters, regardless of merit, may be costly, time-consuming and require the attention of key management and other personnel. The outcomes of such matters are uncertain and difficult to predict. If any such matters are adjudicated against us, in whole or in part, we may be subject to substantial monetary damages, disgorgement of profits and injunctions that prevent us from operating our business, any of which could materially and adversely affect our business and financial condition. We cannot guarantee that our insurance coverage will be sufficient to cover any damages awarded against us. Further, legal proceedings, and any adverse resolution thereof, can result in adverse publicity and damage to our reputation, which could adversely impact our business.

***Because the majority of our product revenue is derived from sales of the CyberKnife and TomoTherapy Systems, which have a long and variable sales and installation cycle, our revenues and cash flows may be volatile and difficult to predict.***

Our primary products are the CyberKnife and TomoTherapy Systems. We expect to generate substantially all of our revenue for the foreseeable future from sales of and service contracts for the CyberKnife and TomoTherapy Systems. The CyberKnife and TomoTherapy Systems have lengthy sales and purchase order cycles because they are major capital equipment items and require the approval of senior management at purchasing institutions. In addition, sales to some of our customers are subject to competitive bidding or public tender processes. These approval and bidding processes can be lengthy. Selling our systems, from first contact with a potential customer to a complete order, generally spans six months to two years and involves personnel with multiple skills. The sales process in the U.S. typically begins with pre-selling activity followed by sales presentations and other sales related activities. After the customer has expressed an intention to purchase a CyberKnife or TomoTherapy System, we negotiate and enter into a definitive purchase contract with the customer. The negotiation of terms that are not standard for Accuray may require additional time and approvals. Typically, following the execution of the contract, the customer begins the building or renovation of a radiation-shielded facility to house the CyberKnife or TomoTherapy System, which

together with the subsequent installation of the CyberKnife or TomoTherapy System, can take up to 24 months to complete. In order to construct this facility, the customer must typically obtain radiation device installation permits, which are granted by state and local government bodies, each of which may have different criteria for permit issuance. If a permit was denied for installation at a specific hospital or treatment center, our CyberKnife or TomoTherapy System could not be installed at that location. In addition, some of our customers are cancer centers or facilities that are new, and in these cases, it may be necessary for the entire facility to be completed before the CyberKnife or TomoTherapy System can be installed, which can result in additional construction and installation delays. Our sales and installations of CyberKnife and TomoTherapy Systems tend to be heaviest during the third month of each fiscal quarter.

Under our revenue recognition policy, we recognize revenue attributable to a CyberKnife or TomoTherapy System and related upgrades when control of a System or upgrade is transferred, which generally happens when a System or upgrade is shipped, while an element of installation is deferred until performed. Events beyond our control may delay shipment or installation and the satisfaction of contingencies required to receive cash inflows and recognition of revenue associated with shipment or installation. Such events may include a delay in the construction at the customer site or customer delay in obtaining receipt of regulatory approvals such as certificates of need. In addition, as a result of the COVID-19 pandemic and the disruption to their operations, certain customers have experienced delays in construction, shipment or installation and some have failed to timely pay their obligations when due. If the events which are beyond our control delay the customer from obtaining funding or financing of the entire transaction, we may not be able to recognize revenue for the sale of the entire system because the collectability of contract consideration is not reasonably assured.

The long sales cycle, together with delays in the shipment of CyberKnife and TomoTherapy Systems or customer cancellations that could affect our ability to recognize revenue, could adversely affect our cash flows and revenue, which would harm our results of operations and may result in significant fluctuations in our reporting of quarterly revenues. Because of these fluctuations, it is likely that in some future quarters, our operating results will fall below the expectations of securities analysts or investors. If that happens, the market price of our stock would likely decrease. These fluctuations also mean that you will not be able to rely upon our operating results in any particular period as an indication of future performance.

***We depend on third-party distributors to market and distribute our products in international markets. If our distributors fail to successfully market and distribute our products, our business will be materially harmed.***

We depend on a number of distributors in our international markets. We cannot control the efforts and resources our third-party distributors will devote to marketing the CyberKnife or TomoTherapy Systems. Our distributors may not be able to successfully market and sell the CyberKnife or TomoTherapy Systems, including as a result of concerns regarding the COVID-19 pandemic, may not devote sufficient time and resources to support the marketing and selling efforts and may not market the CyberKnife or TomoTherapy Systems at prices that will permit the product to develop, achieve or sustain market acceptance. In some jurisdictions, we rely on our distributors to manage the regulatory process and oversee their activities such that they are in compliance with all laws that govern their activities, such as the U.S. Foreign Corrupt Practices Act (“FCPA”), and we are dependent on their ability to do so effectively. In addition, if a distributor is terminated by us or goes out of business, it may take us a period of time to locate an alternative distributor, to seek appropriate regulatory approvals and to train its personnel to market the CyberKnife or TomoTherapy Systems, and our ability to sell and service the CyberKnife or TomoTherapy Systems in the region formerly serviced by such terminated distributor could be materially and adversely affected. Any of our distributors could become insolvent or otherwise become unable to pay amounts owed to us when due. If any of these distributor relationships end and are not replaced, our revenues from product sales or the ability to service our products in the territories serviced by these distributors could be adversely affected. Any of these factors could materially and adversely affect our revenue from international markets, increase our costs in those markets or damage our reputation. If we are unable to attract additional international distributors, our international revenue may not grow. If our distributors experience difficulties, do not comply with regulatory or legal requirements that results in fines or penalties, do not actively market the CyberKnife or TomoTherapy Systems or do not otherwise perform under our distribution agreements, our potential for revenue and gross margins from international markets may be dramatically reduced, and our business could be harmed.

***The high unit price of the CyberKnife and TomoTherapy Systems, as well as other factors, may contribute to substantial fluctuations in our operating results, which could adversely affect our stock price.***

Because of the high unit price of the CyberKnife and TomoTherapy Systems and the relatively small number of units shipped each quarter, each shipment of a CyberKnife or TomoTherapy System can represent a significant percentage of our revenue for a particular quarter. Therefore, if we do not ship a CyberKnife or TomoTherapy System when anticipated, we will not be able to recognize the associated revenue and our operating results will vary significantly from our expectations. This is of particular concern when the economic environment is volatile, such as the current economic environment. For example, in the past, during periods of severe economic volatility, we have had experiences with customers cancelling or postponing orders for our CyberKnife and TomoTherapy Systems and delaying any required build-outs. These fluctuations and other potential fluctuations mean that you should not rely upon our operating results in any particular period as an indication of future performance.

***As a strategy to assist our sales efforts, we may offer extended payment terms, which may potentially result in higher days sales outstanding, reduced cash flows in a particular period and greater payment defaults.***

We offer longer or extended payment terms for qualified customers in some circumstances. As of June 30, 2020, customer contracts with extended payment terms of more than one year amounted to approximately 4% of our total accounts receivable balance. While we qualify customers to whom we offer longer or extended payment terms, their financial positions may change adversely over the longer time period given for payment. In addition, as a result of the COVID-19 pandemic and the resulting disruption to the operations of our customers, we have experienced and, as the effects of the pandemic continue and deepen, may continue to experience increased requests by our customers for extended payment terms as well as temporary suspensions of service and the corresponding payment obligations. This may result in an increase in payment defaults, which would negatively affect our revenue. In addition, any increase in days sales outstanding could also negatively affect our cash flow.

***Our operations are vulnerable to interruption or loss because of natural disasters, global or regional health pandemics or epidemics, terrorist acts and other events beyond our control, which would adversely affect our business.***

We have facilities in countries around the world, including two manufacturing facilities, each of which is equipped to manufacture unique components of our products. Our manufacturing facilities are located in Madison, Wisconsin, and Chengdu, China. We do not maintain backup manufacturing facilities for any of our manufacturing facilities or for our IT facilities, so we depend on each of our current facilities for the continued operation of our business. In addition, we conduct a significant portion of other activities, including administration and data processing, at facilities located in California, which has experienced major earthquakes in the past, as well as other natural disasters. Chengdu, China, where one of our manufacturing facilities is located, has also experienced major earthquakes in the past. We do not carry earthquake insurance. In addition, China has suffered health epidemics related to the outbreak of COVID-19 (including any potential resurgence or additional outbreak of COVID-19), avian influenza and severe acute respiratory syndrome, which could adversely affect our operations in China, including our manufacturing operations in Chengdu, as well as the operations of the JV and those of our customers. Furthermore, on March 1, 2020, the U.S., where our headquarters are located, declared a national emergency concerning the COVID-19 pandemic and the pandemic has spread widely around the world, including in locations where we have facilities and operations. Unexpected events at any of our facilities or otherwise, including as a result of responses to epidemics or pandemics; fires or explosions; natural disasters, such as hurricanes, floods, tornados and earthquakes; war or terrorist activities; unplanned outages; supply disruptions; and failures of equipment or systems, including telecommunications systems, or the failure to take adequate steps to mitigate the likelihood or potential impact of such events, could significantly disrupt our operations, delay or prevent product manufacturing and shipment for the time required to repair, rebuild or replace our manufacturing facilities, which could be lengthy, result in large expenses to repair or replace the facilities, and adversely affect our results of operation. In particular, telecommunication system failures or disruptions could significantly disrupt our operations as a result of our increase remote work arrangements due to the COVID-19 pandemic. In addition, concerns about terrorism, the effects of a terrorist attack, political turmoil or an epidemic outbreak could have a negative effect on our operations and the operations of our suppliers and customers and the ability to travel, which could harm our business, financial condition and results of operations.

***We may attempt to acquire new businesses, products or technologies, or enter into strategic collaborations or alliances, including forming joint ventures, and if we are unable to successfully complete these acquisitions or to integrate acquired businesses, products, technologies or employees, we may fail to realize expected benefits or harm our existing business.***

Our success will depend, in part, on our ability to expand our product offerings and grow our business in response to changing technologies, customer demands and competitive pressures. In some circumstances, we may determine to do so through the acquisition of complementary businesses, products or technologies or through collaborating with complementary businesses, including forming joint ventures, such as the JV, rather than through internal development. The identification of suitable acquisition, alliance and joint venture partner candidates can be difficult, time consuming, and costly, and we may not be able to successfully complete identified acquisitions, alliances or joint ventures. Other companies may compete with us for these strategic opportunities. In addition, even if we successfully complete an acquisition, alliance or joint venture, we may not be able to successfully integrate newly acquired organizations, products or technologies into our operations or timely and effectively commence operations of any joint venture or other alliance because the process of integration could be expensive, time consuming and may strain our resources. Furthermore, we may be required to contribute significant amounts of capital or incur losses in the initial stages of an alliance or joint venture, particularly as selling and marketing activities increase ahead of expected long-term revenue. For example, we completed our capital contributions to the JV in the second quarter of fiscal 2020, however further contributions may be necessary in the future as the joint venture expands its operations in China in order to achieve our long-term strategy in China. In addition, the process for customers of the acquired company, alliance or joint venture to comply with local or foreign regulatory requirements that may be required to purchase our products may cause delays in the acquisition target, alliance partner or joint venture's ability to conduct business. For example, any delays in customers in China to obtain Class A or Class B user licenses or in the subsequent tender process to complete the sale could affect the JV's expected ability to initiate sales and recognize revenue in China. Furthermore, the products and technologies that we acquire, jointly develop, or with respect to which we collaborate may not be successful, or may require significantly greater resources and investments than we originally anticipated. Implementing or acquiring new lines of business or offering new products and services within existing lines of business can affect the sales and profitability of existing lines of business or products and services, including as a result of sales channel conflicts. In addition, we may not be in a position to exercise sole decision making authority regarding any strategic collaboration, alliance or joint venture, which could result in impasses on decisions or decisions made by our partners, and our partners in such collaborations, alliances or joint ventures may have economic or business interests that are, or may become, inconsistent with our interests. Collaborations, alliances and joint ventures can be difficult to manage and may involve significant expense and divert the focus and attention of our management and other key personnel away from our existing businesses. With respect to any acquisition, we may be unable to retain employees of acquired companies, or retain the acquired company's customers, suppliers, distributors or other partners who are our competitors or who have close relationships with our competitors. In addition, with respect to joint ventures, we may not be able to attract qualified employees, acquire customers or develop reliable supply, distribution or other partnerships. As a result of certain collaborations, alliances and joint ventures we could face potential damage to existing customer relationships or lack of customer acceptance or inability to attract new customers. These risks could be magnified to the extent that any new collaboration, alliance or joint venture would result in a significant increase in operations in developing markets. Future acquisitions or alliances could also result in potentially dilutive issuances of equity securities or the incurrence of debt, contingent liabilities, or expenses or other charges such as in-process research and development, any of which could harm our business and affect our financial results or cause a reduction in the price of our common stock. Further, acquisition targets, alliance partners and joint ventures may also operate in foreign jurisdictions with laws and regulations with which we have limited familiarity, which could adversely impact our ability to comply with such laws and regulations and may lead to increased litigation risk. Such laws may also offer us inadequate or less intellectual property protection relative to U.S. laws, which may impact our ability, as well as the ability of the acquisition target, alliance partner and joint venture, to safeguard our respective intellectual property from infringement and misappropriation. As a result of these and other factors, we may not realize the expected benefits of any acquisition, collaboration, joint venture or strategic alliance or such benefits may not be realized at expected levels or within the expected time period. The failure to successfully consummate such strategic transactions and effectively integrate and execute following such consummation may have an adverse impact on our growth, profitability, financial position and results of operations.

***Multiple factors may adversely affect our ability to fully utilize certain tax loss carryforwards.***

As of June 30, 2020, we had approximately \$322.1 million and \$139.1 million in federal and state net operating loss carry forwards, respectively. The federal and state carryforwards expire in varying amounts beginning in 2025 for federal and 2021 for state purposes. In addition, as of June 30, 2020, we had federal and state research and development tax credit carryforwards of approximately \$22 million and \$20.4 million, respectively. Such research credits for federal tax purposes and in states other than California will begin to expire starting in 2021, while the California research credits have no expiration date. The Tax Cuts and Jobs Act of 2017 (Tax Act) U.S. tax legislation, as modified by the Coronavirus Aid, Relief and Economic Security Act (the “CARES Act”), among other things, includes changes to the rules governing net operating losses. Net operating losses arising in tax years beginning after December 31, 2017 are subject to an 80% of taxable income limitation (as calculated before taking the net operating losses into account) when utilized in tax years beginning after December 31, 2020. It is uncertain if and to what extent various states will conform to the Tax Act or CARES Act. In addition, utilization of our net operating loss and credit carry forwards is subject to annual limitation due to the application of the ownership change limitations provided by Section 382 of the Internal Revenue Code and similar state provisions to us. Future changes in our stock ownership, including future offerings, as well as changes that may be outside of our control, could result in an ownership change under Section 382 of the Internal Revenue Code.

***We are subject to the tax laws of various foreign jurisdictions, which are subject to unanticipated changes and interpretation and could harm our future results.***

The application of tax laws of various foreign jurisdictions is subject to interpretation and depends on our ability to operate our business in a manner consistent with our corporate structure and intercompany arrangements. The taxing authorities of jurisdictions in which we operate may challenge our methodologies for valuing intercompany arrangements including our transfer pricing, or determine that the manner in which we operate our business does not achieve the intended tax consequences. The application of tax laws can also be subject to conflicting interpretations by tax authorities in the various jurisdictions we operate. It is not uncommon for taxing authorities in different countries to have conflicting views, with respect to, among other things, the manner in which the arm’s length standard is applied for transfer pricing purposes.

***Our results may be impacted by changes in foreign currency exchange rates.***

Currently, the majority of our international sales are denominated in U.S. Dollars. As a result, an increase in the value of the U.S. Dollar relative to foreign currencies could require us to reduce our sales price or make our products less competitive in international markets. For example, the announcement of Brexit caused severe volatility in global currency exchange rate fluctuations that resulted in the strengthening of the U.S. Dollar against foreign currencies in which we conduct business. We believe the strengthening of the U.S. Dollar has caused a potential delay in orders and we may continue to see our sales decline due to the strengthening of the U.S. Dollar. Also, if our international sales increase, we may enter into a greater number of transactions denominated in non-U.S. Dollars, which would expose us to foreign currency risks, including changes in currency exchange rates. If we are unable to address these risks and challenges effectively, our international operations may not be successful and our business would be materially harmed.

***If we fail to maintain an effective system of internal control over financial reporting, our ability to produce timely and accurate financial results could be impaired. As a result, current and potential stockholders could lose confidence in our financial reporting, which could have an adverse effect on our business and our stock price.***

Effective internal controls are necessary for us to provide reliable financial reports and to protect from fraudulent, illegal, or unauthorized transactions. If we cannot maintain effective controls and provide timely and reliable financial reports, our business and operating results could be harmed.

A failure to implement and maintain effective internal control over financial reporting could result in a material misstatement of our financial statements or otherwise cause us to fail to meet our financial reporting obligations. This, in turn, could result in a loss of investor confidence in the accuracy and completeness of our financial reports, which could have an adverse effect on our business and operating results and our stock price, and we could be subject to stockholder litigation.

In addition, it may be difficult to timely determine the effectiveness of our financial reporting systems and internal controls because of the complexity of our financial model. We recognize revenue from a range of transactions including CyberKnife and TomoTherapy Systems sales and services. The CyberKnife and TomoTherapy Systems are complex products that contain both hardware and software elements. The complexity of the CyberKnife and TomoTherapy Systems and of our financial model used to recognize revenue on such systems requires us to process a greater variety of financial transactions than would be required by a company with a less complex financial model. Accordingly, efforts to timely remediate deficiencies or weaknesses in our internal controls would likely be more challenging for us than they would for a company with a less complex financial model. Furthermore, if we were to find an internal control deficiency or material weakness, we may be required to amend or restate historical financial statements, which would likely have a negative impact on our stock price.

***Changes in interpretation or application of generally accepted accounting principles may adversely affect our operating results.***

We prepare our financial statements to conform to United States Generally Accepted Accounting Principles. These principles are subject to interpretation by the Financial Accounting Standards Board, American Institute of Certified Public Accountants, the Public Company Accounting Oversight Board, the Securities and Exchange Commission and various other regulatory or accounting bodies. A change in interpretations of, or our application of, these principles can have a significant effect on our reported results and may even affect our reporting of transactions completed before a change is announced. Additionally, as we are required to adopt new accounting standards, our methods of accounting for certain items may change, which could cause our results of operations to fluctuate from period to period. For example, upon adoption of ASC 606, we now recognize system revenue upon transfer of control, which is generally at time of delivery. Under the previous accounting guidance, we recognized system revenue upon acceptance when and if we have installation responsibilities. If circumstances change over time or interpretation of the revenue recognition rules change, we could be required to adjust the timing of recognizing revenue and our financial results could suffer.

***Our liquidity could be adversely impacted by adverse conditions in the financial markets.***

At June 30, 2020, we had \$107.6 million in cash and cash equivalents. The available cash and cash equivalents are held in accounts managed by third-party financial institutions and consist of cash in our operating accounts and cash invested in money market funds. To date, we have experienced no material realized losses on or lack of access to our invested cash, or cash equivalents; however, we can provide no assurances that access to our invested cash and cash equivalents will not be impacted by adverse conditions in the financial markets.

At any point in time, we also have funds in our operating accounts that are with third party financial institutions that exceed the Federal Deposit Insurance Corporation (“FDIC”) insurance limits. While we monitor daily the cash balances in our operating accounts and adjust the cash balances as appropriate, these cash balances could be impacted if the underlying financial institutions fail or become subject to other adverse conditions in the financial markets. To date, we have experienced no loss or lack of access to cash in our operating accounts.

***Our ability to raise capital in the future may be limited, and our failure to raise capital when needed could prevent us from executing our growth strategy.***

While we believe that our existing cash and cash equivalents will be sufficient to meet our anticipated cash needs for at least the next twelve months, the timing and amount of our working capital and capital expenditure requirements may vary significantly depending on numerous factors, including the other risk factors described above and below.

If our capital resources are insufficient to satisfy our liquidity requirements, we may seek to sell additional equity securities or debt securities or obtain other debt financing, which could be difficult or impossible depending on the state of economic and capital markets environments at the time, as well as the state of our business, operating results and financial condition. For example, any sustained disruption in the capital markets from the COVID-19 pandemic could negatively impact our ability to raise capital. Our debt levels may impair our ability to obtain additional financing in the future. The sale of additional equity securities or convertible debt securities would result in additional dilution to our stockholders. We cannot assure that additional financing, if required or desired, will be available in amounts or on terms acceptable to us, if at all.

## **Risks Related to the Regulation of our Products and Business**

***Modifications, upgrades, new indications and future products related to the CyberKnife or TomoTherapy Systems or the Precision Treatment Planning or iDMS Data Management System software may require new FDA 510(k) clearances or premarket approvals and similar licensing or approvals in international markets. Such modifications, or any defects in design, manufacture or labeling may require us to recall or cease marketing the affected systems or software until approvals or clearances are obtained.***

The CyberKnife and TomoTherapy Systems as well as the Precision Treatment Planning and iDMS Data Management System software are medical devices that are subject to extensive regulation in the United States by local, state and the federal government, including the FDA. The FDA regulates virtually all aspects of a medical device design, development, testing manufacturing, labeling, storage, record keeping, adverse event reporting, sale, promotion, distribution and shipping. Before a new medical device, or a new intended use or indication or claim for an existing product, can be marketed in the United States, it must first receive either premarket approval or 510(k) clearance from the FDA, unless an exemption exists. Either process can be expensive, lengthy and unpredictable. The FDA's 510(k) clearance process generally takes from three to twelve months, but it can last longer. The process of obtaining premarket approval is much more costly and uncertain than the 510(k) clearance process and it generally takes from one to three years, or even longer, from the time the application is filed with the FDA. Additionally, outside of the United States, our products are subject to clearances and approvals by foreign governmental agencies similar to the FDA. In order to market our products internationally, we must obtain licenses or approvals from these governmental agencies, which could include local requirements, safety standards, testing or certifications, and can be time consuming, burdensome and uncertain. Despite the time, effort and cost, there can be no assurance that a particular device or a modification of a device will be approved or cleared by the FDA or any foreign governmental agency in a timely fashion, if at all. Even if we are granted regulatory clearances or approvals, they may include significant limitations on the indicated uses of the product, which may limit the market for those products, and how those products can be promoted.

Medical devices may only be marketed for the indications for which they are approved or cleared. The FDA and other foreign governments also may change their policies, adopt additional regulations, or revise existing regulations, each of which could prevent or delay approval or clearance of our device, or could impact our ability to market our currently approved or cleared device. We are also subject to medical device reporting regulations, which require us to report to the FDA and other international governmental agencies if our products cause or contribute to a death or a serious injury, or malfunction in a way that would likely cause or contribute to a death or a serious injury. We also are subject to the QSR in the U.S. and ISO 13485 certification in many international markets, compliance with which is necessary to receive FDA and other international clearances or approvals to market new products and is necessary for us to be able to continue to market a cleared or approved product in the United States or globally. After a product is placed in the market, we are also subject to regulations by the FDA and Federal Trade Commission related to the advertising and promotion of our products to ensure our claims are consistent with our regulatory clearances, that there is scientific data to substantiate our claims and that our advertising is not false or misleading. Our products are also subject to state regulations and various worldwide laws and regulations.

A component of our strategy is to continue to upgrade the CyberKnife and TomoTherapy Systems as well as the Precision Treatment Planning and iDMS Data Management System software. Upgrades previously released by us required 510(k) clearance and international registration before we were able to offer them for sale. We expect our future upgrades will similarly require 510(k) clearance or approval; however, future upgrades may be subject to substantially more time consuming data generation requirements and uncertain premarket approval or clearance processes. If we were required to use the premarket approval process for future products or product modifications, it could delay or prevent release of the proposed products or modifications, which could harm our business.

The FDA requires device manufacturers to make their own determination of whether or not a modification requires an approval or clearance; however, the FDA can review a manufacturer's decision not to submit for additional approvals or clearances. Any modification to an FDA approved or cleared device that would significantly affect its safety or efficacy or that would constitute a major change in its intended use would require a new premarket approval or 510(k) clearance. We cannot assure you that the FDA will agree with our decisions not to seek approvals or clearances for particular device modifications or that we will be successful in obtaining premarket approvals or 510(k) clearances for modifications in a timely fashion, if at all.

We have obtained 510(k) clearance for the CyberKnife Systems for the treatment of conditions anywhere in the body when radiation treatment is indicated, and we have obtained 510(k) clearance for the TomoTherapy Systems to be used as integrated systems for the planning and delivery of IMRT for the treatment of cancer. We have made modifications to the CyberKnife and TomoTherapy Systems in the past and may make additional modifications in the future that we believe do not or will not require additional approvals or clearances. If the FDA disagrees, based on new finalized guidance and requires us to obtain additional premarket approvals or 510(k) clearances for any modifications to the CyberKnife or TomoTherapy Systems and we fail to obtain such approvals or clearances or fail to secure approvals or clearances in a timely manner, we may be required to cease manufacturing and marketing the modified device or to recall such modified device until we obtain FDA approval or clearance and we may be subject to significant regulatory fines or penalties.

The FDA and similar governmental authorities in other countries in which we market and sell our products have the authority to require the recall of our products in the event of material deficiencies or defects in design, manufacture or labeling. A government mandated recall, or a voluntary recall by us, could occur as a result of component failures, manufacturing errors or design defects, including defects in labeling and user manuals. Any recall could divert management's attention, cause us to incur significant expenses, generate negative publicity, harm our reputation with customers, negatively affect our future sales and business, require redesign of the CyberKnife or TomoTherapy Systems, and harm our operating results. In these circumstances, we may also be subject to significant enforcement action. If any of these events were to occur, our ability to introduce new or enhanced products in a timely manner would be adversely affected, which in turn would harm our future growth.

***We are subject to federal, state and foreign laws and regulations applicable to our operations, the violation of which could result in substantial penalties and harm our business.***

In addition to regulation by the FDA and similar governmental authorities in other countries, our operations are subject to other laws and regulations, such as laws and rules governing interactions with healthcare providers, anti-corruption laws, privacy rules and transparency laws. In order to maintain compliance with these laws and requirements, we must continually keep abreast of any changes or developments to be able to integrate compliance protocols into the development and regulatory documentation of our products. Failure to maintain compliance could result in substantial penalties to us and harm our business.

*Laws and ethical rules governing interactions with healthcare providers.* The Medicare and Medicaid "anti-kickback" laws, and similar state laws, prohibit soliciting, offering, paying or accepting any payments or other remuneration that is intended to induce any individual or entity to either refer patients to or purchase, lease or order, or arrange for or recommend the purchase, lease or order of, healthcare products or services for which payment may be made under federal and state healthcare programs, such as Medicare and Medicaid. Such laws impact our sales, marketing and other promotional activities by reducing the types of financial arrangements we may have with our customers, potential customers, marketing consultants and other service providers. They particularly impact how we structure our sales offerings, including discount practices, customer support, product loans, education and training programs, physician consulting, research grants and other service arrangements. Many of these laws are broadly drafted and are open to a variety of interpretations, making it difficult to determine with any certainty whether certain arrangements violate such laws, even if statutory safe harbors are available.

In addition to such anti-kickback laws, federal and state "false claims" laws generally prohibit the knowing filing or causing the filing of a false claim or the knowing use of false statements to obtain payment from government payors. Although we do not submit claims directly to payors, manufacturers can be held liable under these laws if they are deemed to "cause" the submission of false or fraudulent claims by providing inaccurate billing or coding information to customers, or through certain other activities, including promoting products for uses or indications that are not approved by the FDA.

We are also subject to federal and state physician self-referral laws. The federal Ethics in Patient Referrals Act of 1989, commonly known as the Stark Law, prohibits, subject to certain exceptions, physician referrals of Medicare and Medicaid patients to an entity providing certain “designated health services” if the physician or an immediate family member has any financial relationship with the entity. The Stark Law also prohibits the entity receiving the referral from billing any good or service furnished pursuant to an unlawful referral. Various states have corollary laws to the Stark Law, including laws that require physicians to disclose any financial interest they may have with a healthcare provider to their patients when referring patients to that provider. Both the scope and exceptions for such laws vary from state to state.

If our past or present operations are found to be in violation of any of these “anti-kickback,” “false claims,” “self-referral” or other similar laws in foreign jurisdictions, we may be subject to the applicable penalty associated with the violation, which may include significant civil and criminal penalties, damages, fines, imprisonment and exclusion from healthcare programs. The impact of any such violations may lead to curtailment or restructuring of our operations, which could adversely affect our ability to operate our business and our financial results.

*Anti-corruption laws.* We are also subject to laws regarding the conduct of business overseas, such as the FCPA, the U.K. Bribery Act of 2010, the Brazil Clean Companies Act, and other similar laws in foreign countries in which we operate. The FCPA prohibits the provision of illegal or improper inducements to foreign government officials in connection with the obtaining of business overseas. Becoming familiar with and implementing the infrastructure necessary to ensure that we and our distributors comply with such laws, rules and regulations and mitigate and protect against corruption risks could be quite costly, and there can be no assurance that any policies and procedures we do implement will protect us against liability under the FCPA or related laws for actions taken by our employees, executive officers, distributors, agents and other intermediaries with respect to our business. Violations of the FCPA or other similar laws by us or any of our employees, executive officers, distributors, agents or other intermediaries could subject us or the individuals involved to criminal or civil liability, cause a loss of reputation in the market, and materially harm our business.

*Laws protecting patient health information.* There are a number of federal and state laws protecting the confidentiality of certain patient health information, including patient records, and restricting the use and disclosure of that protected information. In particular, the U.S. Department of Health and Human Services (“HHS”) has promulgated patient privacy rules under the HIPAA. These privacy rules protect medical records and other personal health information of patients by limiting their use and disclosure, giving patients the right to access, amend and seek accounting of their own health information and limiting most uses and disclosures of health information to the minimum amount reasonably necessary to accomplish the intended purpose. The HIPAA privacy standard was amended by the Health Information Technology for Economic and Clinical Health Act, enacted as part of the American Recovery and Reinvestment Act of 2009. Although we are not a “covered entity” under HIPAA, we are considered a “business associate” of certain covered entities and, as such, we are directly subject to HIPAA, including its enforcement scheme and inspection requirements, and are required to implement policies, procedures as well as reasonable and appropriate physical, technical and administrative security measures to protect individually identifiable health information we receive from covered entities. Our failure to protect health information received from customers in compliance with HIPAA or other laws could subject us to civil and criminal liability to the government and civil liability to the covered entity, could result in adverse publicity, and could harm our business and impair our ability to attract new customers.

*Transparency laws.* The Sunshine Act, which was enacted by Congress as part of the Patient Protection and Affordable Care Act on December 14, 2011, requires each applicable manufacturer, which includes medical device companies such as Accuray, to track and report to the federal government on an annual basis all payments and other transfers of value from such applicable manufacturer to U.S. licensed physicians and teaching hospitals as well as physician ownership of such applicable manufacturer’s equity, in each case subject to certain statutory exceptions. Furthermore, on October 25, 2018, President Trump signed into law the “Substance Use-Disorder Prevention that Promoted Opioid Recovery and Treatment for Patients and Communities Act” which in part (under a provision entitled “Fighting the Opioid Epidemic with Sunshine”) extends the reporting and transparency requirements for physicians in the Physician Payments Sunshine Act to physician assistants, nurse practitioners, clinical nurse specialists, certified registered nurse anesthetists, and certified nurse midwives (with reporting requirements going into effect in 2022 for payments made in 2021). Such data will be made available by the government on a publicly searchable website. Failure to comply with the data collection and reporting obligations imposed by the Sunshine Act can result in civil monetary penalties ranging from \$1,000 to \$10,000 for each payment or other transfer of value that is not reported (up to a maximum of \$150,000 per reporting period) and from \$10,000 to \$100,000 for each knowing failure to report (up to a maximum of \$1 million per reporting period). In addition, we are subject to similar state and foreign laws related to the tracking and reporting of payments and other transfers of value to healthcare professionals, the violation of which could, among other things, result in civil monetary penalties and adversely impact our reputation and business.

***If we or our distributors do not obtain and maintain the necessary regulatory approvals in a specific country, we will not be able to market and sell our products in that country.***

To be able to market and sell our products in a specific country, we or our distributors must comply with applicable laws and regulations of that country. In jurisdictions where we rely on our distributors to manage the regulatory process, we are dependent on their ability to do so effectively. While the laws and regulations of some countries do not impose barriers to marketing and selling our products or only require notification, others require that we or our distributors obtain the approval of a specified regulatory body. These laws and regulations, including the requirements for approvals, and the time required for regulatory review vary from country to country. The governmental agencies regulating medical devices in some countries, for example, require that the user interface on medical device software be in the local language. We currently provide user guides and manuals, both paper copies and electronically, in the local language but only provide an English language version of the user interface. Obtaining regulatory approvals is expensive and time-consuming, and we cannot be certain that we or our distributors will receive regulatory approvals in each country in which we market or plan to market our products. If we modify our products, we or our distributors may need to apply for additional regulatory approvals before we are permitted to sell them. We may not continue to meet the quality and safety standards required to maintain the authorizations that we or our distributors have received. It can also be costly for us and our distributors to keep up with regulatory changes issued or mandated from time to time. If we change distributors, it may be time-consuming and disruptive to our business to transfer the required regulatory approvals, particularly if such approvals are maintained by our third-party distributors on our behalf. If we or our distributors are unable to maintain our authorizations, or fail to obtain appropriate authorizations in a particular country, we will no longer be able to sell our products in that country, and our ability to generate revenue will be materially adversely affected.

Within the EU, we are required under the Medical Device Directive to affix the Conformité Européene, or CE, mark on our products in order to sell the products in member countries of the EU. This conformity to the applicable directives is done through self-declaration and is verified by an independent certification body, called a Notified Body, before the CE mark can be placed on the device. Once the CE mark is affixed to the device, the Notified Body will regularly audit us to ensure that we remain in compliance with the applicable European laws or directives. CE marking demonstrates that our products comply with the laws and regulations required by the European Union countries to allow free movement of trade within those countries. If we cannot support our performance claims and/or demonstrate or maintain compliance with the applicable European laws and directives, we lose our CE mark, which would prevent us from selling our products within the European Union. In addition, the EU deferred the implementation of the Medical Device Regulation (“MDR”), which replaces the existing Medical Device Directive, from May 2020 to May 2021 due to the impact of the COVID-19 pandemic on the readiness of countries and oversight bodies. The MDR establishes new requirements and oversight for maintaining the CE mark. The official guidance continues to be published for the implementation of these requirements and the number of Notified Bodies are still limited. There may be variability in review timeframes and requirements as both manufacturers and authorities navigate these new requirements.

Under the Pharmaceutical Affairs Law in Japan, a pre-market approval necessary to sell, market and import a product, or Shonin, must be obtained from the Ministry of Health, Labor and Welfare (“MHLW”), for our products. Before issuing approvals, MHLW examines the application in detail with regard to the quality, efficacy, and safety of the proposed medical device. The Shonin is granted once MHLW is content with the safety and effectiveness of the medical device. The time required for approval varies. A delay in approval could prevent us from selling our products in Japan, which could impact our ability to generate revenue and harm our business.

In addition to laws and regulations regarding medical devices, we are subject to a variety of environmental laws and regulations around the world regulating our operations, including those relating to the use, generation, handling, storage, transportation, treatment and disposal of hazardous materials, which laws impose compliance costs on our business and can also result in liability to us. Although we follow procedures intended to comply with existing environmental laws and regulations, risk of accidental contamination or injury can never be fully eliminated. In the event of an accident, state or federal or other applicable authorities may curtail our use of these materials and interrupt our business operations. In addition, future changes in these laws and regulations could also increase our costs of doing business. We must continually keep abreast of these standards and requirements and integrate our compliance into the development and regulatory documentation for our products. Failure to meet these standards could limit our ability to market our products in those regions that require compliance to such standards. For example, the European Union has adopted directives that may lead to restrictions on the use of certain hazardous substances or other regulated substances in some of our products sold there, unless such products are eligible for an exemption. While we believe that certain of our products are exempt, there can be no guarantee that such determination would not be challenged or that the regulations would not change in a way that would subject our products to such regulation. These directives, along with other laws and regulations that may be adopted by other

countries, could increase our operating costs in order to maintain access to certain markets, which could adversely affect our business.

***Healthcare reform legislation could adversely affect demand for our products, our revenue and our financial condition.***

In March 2010, the Patient Protection and Affordable Care Act, as amended by Health Care and Education Reconciliation Act (collectively, the “ACA”) were signed into law. The ACA includes a large number of health related provisions, including expanding Medicaid eligibility, requiring most individuals to have health insurance, establishing new regulations on health plans, establishing health insurance exchanges, requiring manufacturers to report payments or other transfers of value made to physicians and teaching hospitals, modifying certain payment systems to encourage more cost-effective care and a reduction of inefficiencies and waste and including new tools to address fraud and abuse. The laws also include a decrease in the annual rate of inflation for Medicare payments to hospitals and the establishment of an independent payment advisory board to suggest methods of reducing the rate of growth in Medicare spending. We do not yet know the full impact that the ACA will have on our business. The expansion in the government's role in the U.S. healthcare industry may result in decreased profits to us, lower reimbursement by third-party payors for our products, or reduced volume of medical procedures conducted with our products, all of which could have a material adverse effect on our business, financial condition and results of operations. The federal government may take further action regarding the ACA, including, but not limited to, repeal or replacement action. Most recently, the Tax Act was signed into law in December 2017, which, among other things, removed penalties for not complying with the individual mandate to carry health insurance. Additionally, all or a portion of the ACA and related subsequent legislation may be modified, repealed or otherwise invalidated through judicial challenge, which could result in lower numbers of insured individuals, reduced coverage for insured individuals and adversely affect our business.

In addition, since the adoption of the Affordable Care Act, other legislation designed to keep federal healthcare costs down has been proposed or passed. For example, under the sequestration required by the Budget Control Act of 2011, as amended by the American Taxpayer Relief Act of 2012, Medicare payments for all items and services under Parts A and B incurred on or after April 1, 2013 have been reduced by up to 2%. Future federal legislation may impose further limitations on the coverage or amounts of reimbursement available for our products from governmental agencies or third-party payors. These limitations could have a negative impact on the demand for our products and services, and therefore on our financial position and results of operations.

Since the enactment of the ACA, CMS continues its efforts to move away from fee-for-service payments for furnishing items and services in Medicare. In the past several rulemaking cycles, CMS has increased packaging policies and created larger payment bundles across the Medicare Hospital Outpatient Prospective Payment System (“OPPS”). One example is CMS’ expansion of Comprehensive Ambulatory Payment Classifications, under which payment for adjunctive and secondary items, services and procedures are packaged into the most costly primary procedure at the claim level. Beyond the OPSS, CMS’ Innovation Center has launched a number of alternative payment model (“APM”) demonstrations that involve episode-based (i.e. bundled) payment. Since 2011, for example, Center for Medicare and Medicaid Innovation (“CMMI”) has created and is in the process of creating major federal initiatives to test episode-based payments, such as the Bundled Payments for Care Improvement, Oncology Care Model, Specialty Practitioners Payment Model Opportunities. More recently, CMMI proposed a Radiation Oncology Model (“OM”), which would mandate selected radiotherapy providers to participate in a prospective, episode-based payments model where payment is based on a patient’s diagnosis as opposed to the traditional volume-based fee-for service payment model. It is unclear what impact, if any, such initiatives will have on our business and operating results, but uncertainties surrounding the implementation of these payment models could pause or otherwise delay the purchase of our products by our customers and any resulting decrease in reimbursement to our customers may result in reduced demand for our services.

Furthermore, the Patient Access and Medicare Protection Act of 2015 froze payment for some radiation therapy delivery and related services, and requires CMS to provide a report to the U.S. Congress on the development of an APM for radiation therapy services provided in non-facility settings. While these types of payment packaging policies and episode-based payments may impact reimbursement for overall patient care, including items and services furnished to patients, they also create incentives for providers to carefully assess the value proposition of technology purchases and uses. The impacts of these payment and delivery system changes are in their infancy and their overall effects remain under review.

Future legislative or policy initiatives directed at reducing costs could be introduced at either the federal or state level. We cannot predict what healthcare reform legislation or regulations, if any, including any potential repeal or amendment of the ACA, will be enacted in the United States or elsewhere, what impact any legislation or regulations related to the healthcare system that may be enacted or adopted in the future might have on our business, or the effect of ongoing uncertainty or public perception about these matters will have on the purchasing decisions of our customers. However, the implementation of new legislation and regulation may materially lower reimbursements for our products, materially reduce medical procedure volumes and significantly and adversely affect our business.

***Regulations related to “conflict minerals” may force us to incur additional expenses, may result in damage to our business reputation and may adversely impact our ability to conduct our business.***

The Dodd-Frank Wall Street Reform and Consumer Protection Act and the rules promulgated by the SEC under such act require companies, including Accuray, to disclose the existence in their products of certain metals, known as “conflict minerals,” which are metals mined from the Democratic Republic of the Congo and adjoining countries. These rules requires investigative efforts, which has and will continue to cause us to incur associated costs, could adversely affect the sourcing, availability and pricing of minerals used in our products and may cause reputational harm if we determine that certain of our components contain such conflict minerals or if we are unable to alter our processes or sources of supply to avoid using such materials, all of which could adversely impact sales of our products and results of operations.

### **Risks Related to Our Common Stock**

***The price of our common stock is volatile and may continue to fluctuate significantly, which could lead to losses for stockholders.***

The stock market in general has recently experienced relatively large price and volume fluctuations, particularly in response to the COVID-19 outbreak. In addition, the trading prices of the stock of high-technology companies of our size can experience extreme price and volume fluctuations. These fluctuations often have been unrelated or out of proportion to the operating performance of these companies. Our stock price has experienced periods of volatility. Broad market fluctuations may also harm our stock price. Continued market fluctuations could result in extreme volatility in the price of our common stock, which could cause a decline in the value of our common stock. Any negative change in the public’s perception of the prospects of companies that employ similar technology or sell into similar markets could also depress our stock price, regardless of our actual results.

In addition to the other risk factors described above and below, factors affecting the trading price of our common stock include:

- impacts to our business, operations or financial condition caused by concerns in connection with the COVID-19 pandemic as well as the related public and private sector responses to the pandemic;
- regulatory developments related to manufacturing, marketing or sale of the CyberKnife or TomoTherapy Systems;
- political or social uncertainties;
- changes in product pricing policies;
- variations in our operating results, as well as costs and expenditures;
- announcements of technological innovations, new services or service enhancements, strategic alliances or significant agreements by us or by our competitors;
- changes in analysts’ estimates, investors’ perceptions, recommendations by securities analysts or our failure to achieve analysts’ and our own estimates;

- recruitment or departure of key personnel;
- the performance of our competitors and investor perception of the markets and industries in which we compete;
- announcement of strategic transactions or capital raising activities; and
- market conditions in our industry, the industries of our customers and the economy as a whole.

***The sale of material amounts of common stock by our stockholders could encourage short sales by third parties and depress the price of our common stock.***

The downward pressure on our stock price caused by the sale of a significant number of shares of our common stock, or the perception that such sales could occur, by any of our significant stockholders could cause our stock price to decline, thus allowing short sellers of our stock an opportunity to take advantage of any decrease in the value of our stock. The presence of short sellers in our common stock may further depress the price of our common stock.

***Future issuances of shares of our common stock could dilute the ownership interests of our stockholders.***

Any issuance of equity securities could dilute the interests of our stockholders and could substantially decrease the trading price of our common stock. We may issue equity securities in the future for a number of reasons, including to finance our operations and business strategy (including in connection with acquisitions, strategic collaborations or other transactions), to adjust our ratio of debt to equity, to satisfy our obligations upon the exercise of outstanding options or for other reasons.

In August 2017, we issued \$85.0 million aggregate principal amount of our 3.75% Convertible Senior Notes due 2022 (the “3.75% Convertible Notes”) under an indenture between us and The Bank of New York Mellon Trust Company, N.A., as trustee. \$53.0 million aggregate principal amount of the 3.75% Convertible Notes were issued to certain holders of our outstanding Existing Notes in exchange for approximately \$47.0 million aggregate principal amount of the Existing Notes (the “Exchange”) and \$32.0 million aggregate principal amount of the 3.75% Convertible Notes were issued to certain other qualified new investors for cash. The net proceeds of the cash issuance were used to repurchase approximately \$28.0 million of Existing Notes. In February 2018, we paid \$40.2 million in cash to settle outstanding principal and accrued interest, and issued 254,000 shares of our common stock to retire the Existing Notes. To the extent we issue common stock upon conversion of any outstanding convertible notes, that conversion would dilute the ownership interests of our stockholders.

***The conditional conversion features of the 3.75% Convertible Notes, if triggered, may adversely affect our financial condition and operating results.***

In the event the conditional conversion features of the 3.75% Convertible Notes are triggered, holders of the 3.75% Convertible Notes, as applicable, will be entitled to convert such notes at any time during specified periods at their option. If one or more holders elect to convert such notes, unless we elect to satisfy our conversion obligation by delivering solely shares of our common stock (other than paying solely cash in lieu of any fractional share), including if we have irrevocably elected full physical settlement upon conversion, we would be required to make cash payments to satisfy all or a portion of our conversion obligation based on the applicable conversion rate, which could adversely affect our liquidity. In addition, even if holders do not elect to convert such notes, if we have irrevocably elected net share settlement upon conversion we could be required under applicable accounting rules to reclassify all or a portion of the outstanding principal of such notes as a current rather than long-term liability, which could result in a material reduction of our net working capital.

***Provisions in the indenture for the 3.75% Convertible Notes, the credit agreement for our Revolving Credit Facility, our certificate of incorporation and our bylaws could discourage or prevent a takeover, even if an acquisition would be beneficial in the opinion of our stockholders.***

Provisions of our certificate of incorporation and bylaws could make it more difficult for a third-party to acquire us, even if doing so would be beneficial in the opinion of our stockholders. These provisions include:

- authorizing the issuance of “blank check” preferred stock that could be issued by our board of directors to increase the number of outstanding shares and thwart a takeover attempt;
- establishing a classified board of directors, which could discourage a takeover attempt;
- prohibiting cumulative voting in the election of directors, which would limit the ability of less than a majority of stockholders to elect director candidates;
- limiting the ability of stockholders to call special meetings of stockholders;
- prohibiting stockholder action by written consent and requiring that all stockholder actions be taken at a meeting of our stockholders; and
- establishing advance notice requirements for nominations for election to the board of directors or for proposing matters that can be acted upon by stockholders at stockholder meetings.

In addition, Section 203 of the Delaware General Corporation Law may discourage, delay or prevent a change of control of our company. Generally, Section 203 prohibits stockholders who, alone or together with their affiliates and associates, own more than 15% of the subject company from engaging in certain business combinations for a period of three years following the date that the stockholder became an interested stockholder of such subject company without approval of the board or 66<sup>2</sup>/<sub>3</sub>% of the independent stockholders. The existence of these provisions could adversely affect the voting power of holders of common stock and limit the price that investors might be willing to pay in the future for shares of our common stock.

A change of control will also trigger an event of default under the Revolving Credit Facility. If an event of default occurs, the agent for the lenders under the Revolving Credit Facility may, at its discretion, suspend or terminate any of the lenders’ loan obligations thereunder and/or declare all or any portion of the loan then-outstanding under the Revolving Credit Facility, including all accrued but unpaid interest thereon, to be accelerated and immediately due and payable.

Furthermore, if a “fundamental change” (as such term is defined in the indenture of the 3.75% Convertible Notes) occurs, holders of the 3.75% Convertible Notes will have the right, at their option, to require us to repurchase all or a portion of their convertible notes. A “fundamental change” generally occurs when there is a change in control of Accuray (acquisition of 50% or more of our voting stock, liquidation or sale of Accuray not for stock in another publicly traded company) or trading of our stock is terminated. In the event of a “make-whole fundamental change” (as such term is defined in the indenture of the 3.75% Convertible Notes), we may also be required to increase the conversion rate applicable to the 3.75% Convertible Notes surrendered for conversion in connection with such make-whole fundamental change. A “make-whole fundamental change” is generally a sale of Accuray not for stock in another publicly traded company. In addition, the indenture for the 3.75% Convertible Notes prohibits us from engaging in certain mergers or acquisitions unless, among other things, the surviving entity assumes our obligations under the 3.75% Convertible Notes.

***We have not paid dividends in the past and do not expect to pay dividends in the foreseeable future.***

We have never declared or paid cash dividends on our capital stock. We currently intend to retain all future earnings for the operation and expansion of our business and, therefore, do not anticipate declaring or paying cash dividends in the foreseeable future. The payment of dividends will be at the discretion of our board of directors and will depend on our results of operations, capital requirements, financial condition, prospects, contractual arrangements, and other factors our board of directors may deem relevant. If we do not pay dividends, a return on a stockholders’ investment will only occur if our stock price appreciates.

## **Item 1B. UNRESOLVED STAFF COMMENTS**

None.

## **Item 2. PROPERTIES**

### **Facilities**

We currently lease approximately 124,000 square feet of product development and administrative space in two buildings in Sunnyvale, California, as follows:

- A headquarters building that is approximately 74,000 square feet, which is leased to us until December 2023. We have the right to renew the lease term of our headquarters office building for two five-year terms upon prior written notice and the fulfillment of certain conditions; and
- A research and development facility totaling approximately 50,000 square feet, which is leased to us until December 2023.

We also lease approximately 177,000 square feet of product development, manufacturing, administrative and warehouse space in five buildings in Madison, Wisconsin, as follows:

- An office building totaling approximately 61,000 square feet, which is leased to us until June 2025;
- A manufacturing facility totaling approximately 56,000 square feet, which is leased to us until June 2025; and
- Warehouse and office space in three buildings totaling approximately 60,000 square feet, which are leased to us through various dates until April 2023.

Our wholly owned subsidiary, Accuray International Sàrl, leases one office building that consists of approximately 21,000 square feet of administrative space in Morges, Switzerland, which are leased to Accuray International until December 2024.

In addition, our wholly-owned subsidiary, Accuray Accelerator Technology Company Limited, leases approximately 42,000 square feet of space in a manufacturing facility in Chengdu, China until July 2021.

We, directly or through our subsidiaries, also maintain offices in: Pittsburgh, Pennsylvania; Durham, North Carolina; Solon, Ohio; China; Hong Kong; Japan; Spain; India; Russia; Germany; Brazil; and the United Arab Emirates.

We believe our current facilities are adequate to meet our current needs, but additional space, including additional radiation shielded areas in which systems can be assembled and tested, may be required in the future to accommodate anticipated increases in manufacturing needs.

## **Item 3. LEGAL PROCEEDINGS**

Refer to Note 9, *Commitments and Contingencies*, to the Consolidated Financial Statements for a description of certain legal proceedings currently pending against the Company. From time to time we are involved in legal proceedings arising in the ordinary course of our business.

## **Item 4. MINE SAFETY DISCLOSURES**

Not applicable.

## PART II

### Item 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

#### *Stock Information*

Our common stock is traded on the Nasdaq Global Select Market under the symbol "ARRAY."

We have never paid cash dividends on our common stock. Our Board of Directors intends to use any future earnings to support operations and reinvest in the growth and development of our business. There are no current plans to pay cash dividends to common stockholders in the foreseeable future.

As of August 20, 2020, there were 193 registered stockholders of record of our common stock. Because many of our shares of common stock are held by brokers or other institutions on behalf of stockholders, we are unable to estimate the total number of beneficial stockholders and believe the number of registered stockholders of record underestimates our total number of stockholders.

During the year ended June 30, 2020, there were no sales of unregistered equity securities by us other than those transactions previously reported to the Securities and Exchange Commission (SEC) on our Current Reports on Form 8-K.

We do not have a stock repurchase program and have not made any share repurchases during the year ended June 30, 2020.

See Item 12, "Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters" for information regarding securities authorized for issuance under our equity compensation plans.

## Stock Performance Graph

The graph set forth below compares the cumulative total stockholder return on our common stock between June 30, 2015 and June 30, 2020, with the cumulative total return of (i) the S&P Healthcare Index and (ii) the Nasdaq Composite Index, over the same period. This graph assumes the investment of \$100.00 on June 30, 2015 in our common stock, the S&P Healthcare Index and the Nasdaq Composite Index, and assumes the reinvestment of dividends, if any.

### COMPARISON OF 5 YEAR CUMULATIVE TOTAL RETURN\*

Among Accuray Incorporated, the NASDAQ Composite Index and the S&P Health Care Index

\*\$100 invested on 6/30/15 in stock or index, including reinvestment of dividends.  
Fiscal year ending June 30.

The comparisons shown in the graph above are based upon historical data. We caution that the stock price performance shown in the graph above is not necessarily indicative of, nor is it intended to forecast, the potential future performance of our common stock.

## Item 6. SELECTED FINANCIAL DATA

The following selected consolidated financial data should be read in conjunction with, and are qualified by reference to, our consolidated financial statements and related notes and “Management’s Discussion and Analysis of Financial Condition and Results of Operations” appearing elsewhere in this Form 10-K. The consolidated statements of operations for the years ended June 30, 2020, 2019 and 2018, and the consolidated balance sheet data at June 30, 2020 and 2019 are derived from, and are qualified by reference to, the consolidated financial statements that have been audited by our independent registered public accounting firm, which are included elsewhere in this Form 10-K. The consolidated statements of operations data for the years ended June 30, 2017 and 2016 and the consolidated balance sheet data at June 30, 2018, 2017 and 2016 is derived from our audited consolidated financial statements not included in this Form 10-K.

	Years Ended June 30,				
	2020	2019	2018	2017	2016

## **Item 7. MANAGEMENT’S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

*You should read the following discussion of our consolidated financial condition and results of operations in conjunction with the financial statements and the notes thereto included elsewhere in this report. The following discussion contains forward-looking statements that reflect our plans, estimates and beliefs. Our actual results could differ materially from those discussed in the forward-looking statements. Factors that could cause or contribute to these differences include those discussed below and elsewhere in this report on Form 10-K, particularly in “Risk Factors.” See “Special Note Regarding Forward-Looking Statements.”*

### **Overview**

#### ***Products and Markets***

#### **Company**

We are a radiation oncology company that develops, manufactures, sells and supports precise, innovative treatment solutions that set the standard of care, with the aim of helping patients live longer, better lives. Our leading-edge technologies, the CyberKnife and TomoTherapy Systems, including the Radixact Systems, the next generation TomoTherapy platform, are designed to deliver advanced radiation therapy including radiosurgery, stereotactic body radiation therapy, intensity modulated radiation therapy, image-guided radiation therapy and adaptive radiation therapy tailored to the specific needs of each patient. The CyberKnife and TomoTherapy Systems are complementary offerings serving largely separate patient populations treated by the same medical specialty, radiation oncology. Both systems have advanced capabilities that offer increased treatment flexibility to meet the needs of an expanding patient population including patients requiring retreatment with radiation therapy and palliative care. We also offer comprehensive software solutions to enable and enhance the precise and efficient radiosurgery and radiotherapy treatment with our CyberKnife and TomoTherapy Systems. In addition to these products, we also provide services, which include post-contract customer support (warranty period services and post warranty services), installation services, training, and other professional services.

#### ***The CyberKnife Systems***

The CyberKnife Systems are robotic systems designed to deliver radiosurgery treatments to cancer tumors anywhere in the body. The CyberKnife Systems are the only dedicated, full-body robotic radiosurgery systems on the market. Radiosurgery is an alternative to traditional surgery for tumors and is performed on an outpatient basis in one to five treatment sessions. It enables the treatment of patients who typically might not otherwise be treated with radiation, who may not be good candidates for surgery, or who desire non-surgical treatments. The use of radiosurgery with CyberKnife Systems to treat tumors throughout the body has grown significantly in recent years, but currently only a small portion of the patients who develop tumors treatable with CyberKnife Systems are treated with these systems. A determination of when it may or may not be appropriate to use a CyberKnife System for treatment is at the discretion of the treating physician and depends on the specific patient. However, CyberKnife Systems are generally not used to treat (1) very large tumors, which are considerably wider than the radiation beam that can be delivered by CyberKnife Systems, (2) diffuse wide-spread disease, as is often the case for late stage cancers, because they are not localized (though CyberKnife Systems might be used to treat a focal area of the disease), and (3) systemic diseases, like leukemia and lymphoma, which are not localized to an organ, but rather involve cells throughout the body. The CyberKnife Systems are the only robotic radiosurgery systems available today which deliver such high precision treatments for intra- and extra-cranial disease sites throughout the body, including prostate, lung, brain, spine, liver, pancreas and kidney. The latest generation CyberKnife M6 Series System is available with the InCise Multileaf Collimator (InCise MLC), the world’s first multileaf collimator (MLC) to be available on a robotic platform.

Our CyberKnife M6 Series Systems have the option of: fixed collimator, Iris Variable Aperture Collimator and/or multi-leaf collimator, or InCise MLC. The InCise MLC is designed specifically for the M6 Series. With the InCise MLC, clinicians can deliver the same precise radiosurgery treatments they have come to expect with the CyberKnife System, faster and for a wider range of tumor types than prior CyberKnife Systems. The InCise MLC makes it faster and more efficient to treat a wider range of tumor types with the CyberKnife M6 Series System, including larger tumors and those with multiple sites of disease.

In 2018, we introduced the VOLO Optimizer software upgrade for the CyberKnife System. The VOLO facilitates the development of clinically optimal treatment plans up to 90 percent faster than before and the delivery of the treatment up to an estimated 50 percent faster than before, allowing CyberKnife treatments to typically be performed in 15 to 30 minutes.

In June 2020, we launched the CyberKnife S7 System, an innovative device combining speed, advanced precision, and real-time artificial intelligence-driven motion tracking and synchronization treatment delivery for all stereotactic radiosurgery (SRS) and stereotactic body radiation therapy (SBRT) treatments in as little as 15 minutes. The CyberKnife S7 System is the next-generation CyberKnife platform, a robotic, non-invasive radiation therapy device capable of treating cancerous and benign tumors throughout the body, as well as neurologic disorders.

We believe the long-term success of the CyberKnife Systems is dependent on a number of factors including the following:

- Continued adoption of our CyberKnife M6 Series Systems;
- Greater awareness among doctors and patients of the benefits of radiosurgery conducted with the CyberKnife Systems;
- Continued evolution in clinical studies demonstrating the safety, efficacy and other benefits of using the CyberKnife Systems to treat tumors in various parts of the body;
- Change in medical practice leading to utilization of stereotactic body radiosurgery more regularly as an alternative to surgery or other treatments;
- Continued advances in our technology that improve the quality of treatments and ease of use of the CyberKnife Systems;
- Receipt of regulatory approvals in various countries which are expected to improve access to radiosurgery with the CyberKnife Systems in such countries;
- Medical insurance reimbursement policies that cover CyberKnife System treatments; and
- Our ability to expand sales of CyberKnife Systems in countries throughout the world where we do not currently sell or have not historically sold a significant number of CyberKnife Systems.

***TomoTherapy Systems, including Radixact, the next generation TomoTherapy platform***

The TomoTherapy Systems are advanced, fully integrated and versatile radiation therapy systems for the treatment of a wide range of cancer types. The TomoTherapy Systems are specifically designed for image-guided intensity-modulated radiation therapy (“IG-IMRT”). The TomoTherapy Systems include the TomoTherapy H Series Systems with configurations of TomoH, TomoHD, and TomoHDA. Based on a CT scanner platform, the systems provide continuous delivery of radiation from 360 degrees around the patient, or delivery from clinician-specified beam angles. These unique features, combined with daily 3D image guidance, enable physicians to deliver highly accurate, individualized dose distributions which precisely conform to the shape of the patient’s tumor while minimizing dose to normal, healthy tissue, resulting in fewer side effects for the patient. The TomoTherapy Systems are capable of treating all standard radiation therapy indications including breast, prostate, lung, and head and neck cancers, in addition to complex and novel treatments such as total marrow irradiation. The Radixact System, the next generation TomoTherapy platform, includes our integrated Accuray Precision treatment planning software and new iDMS Data Management System. The Radixact System leverages the TomoTherapy System’s efficient daily low-dose fan beam MVCT image guidance and unique ring gantry architecture, delivering precise radiation treatments for more patients, faster, with simpler, more automated workflows.

Most recently, we introduced our Synchrony motion tracking and correction technology for the Radixact System. This feature adds intrafraction motion synchronization capabilities to the Radixact System, enabling real-time tracking, visualization and correction for tumor motion during treatment, with the goal of improving dose accuracy and treatment times as compared to conventional radiation therapy systems. In 2019, Synchrony for Radixact was shipped to selected clinical evaluation sites globally, with the broader commercial launch conducted in early calendar year 2020.

We believe the Radixact System and other TomoTherapy Systems offer clinicians and patients significant benefits over other radiation therapy systems in the market. We believe our ability to capture more sales will be influenced by a number of factors including the following:

- Continued adoption of our TomoTherapy Systems, including the adoption of Radixact Systems in markets where it is available;
- Greater awareness among doctors and patients of the unique benefits of radiation therapy using TomoTherapy Systems because of their ring gantry architecture and ability to deliver treatment from 360 degrees around the patient;
- Advances in our technology that improve the quality of treatments and ease of use of TomoTherapy Systems;
- Greater awareness among doctors of the now-established reliability of TomoTherapy Systems; and
- Our ability to expand sales of TomoTherapy Systems in countries throughout the world where we do not currently sell or have not historically sold a significant number of TomoTherapy Systems.

## **Sale of Our Products**

Generating revenue from the sale of our systems is a lengthy process. Selling our systems, from first contact with a potential customer to a signed sales contract that meets our backlog criteria (as discussed below) varies significantly and generally spans between six months and two years. The length of time between receipt of a signed contract and revenue recognition is generally governed by the time required by the customer to build, renovate or prepare the treatment room for installation of the system.

In the United States, we primarily market directly to customers, including hospitals and stand-alone treatment facilities, through our sales organization and we also market to customers through sales agents and group purchasing organizations. Outside the United States, we market to customers directly and through distributors and sales agents. In addition to our offices in the United States, we have sales and service offices in Europe, Asia, and South America.

In October 2019, our systems were named in 50 out of 58 Class A user licenses awarded by the China National Health Commission. The Chinese Ministry of Health requires a tender process following the license awards for all participating end user hospitals prior to being able to take receipt of a Class A device. This tender process defines the transactional terms and conditions related to each hospital's equipment order and does not put us in a competitive bidding situation that would result in changes in the specific device for which the hospital has received the Class A user license. The approximate value of revenue attributable to the Accuray systems subject to the 50 Class A licenses is expected to be \$115.0 million. As a result of delays in the tender process and other uncertainties caused by the COVID-19 pandemic, revenue recognition was delayed and while circumstances might change, we currently expect to start recognizing revenue for these systems in the first half of our fiscal 2021. Further, our sales in China may be impacted by tariffs against foreign imports of certain materials. While China announced a one year tariff exemption for medical linear accelerators in September 2019, there is no assurance that the exemption will continue beyond one year or that we will continue to qualify for such exemption. Despite the challenges and uncertainties created by the COVID-19 pandemic in China and around the world, we continue to believe that China remains the world's fastest growing market for radiation oncology systems and the pandemic does not affect the long-term demand for radiotherapy equipment in China.

## ***Joint Venture***

In January 2019, our wholly-owned subsidiary, Accuray Asia Limited (“Accuray Asia”), entered into an agreement with CNNC High Energy Equipment (Tianjin) Co., Ltd. (the “CIRC Subsidiary”), a wholly-owned subsidiary of China Isotope & Radiation Corporation, to form a joint venture, CNNC Accuray (Tianjin) Medical Technology Co. Ltd. (the “JV”), to manufacture and sell radiation oncology systems in China. The JV aims to be uniquely positioned to serve China, which we believe is the world’s largest growth market for radiation oncology systems. China represents a significantly underserved market for linacs based on the country’s population and cancer incidence rates on both an absolute and relative country basis. Accuray Asia initially has a 49% ownership interest in the JV and the CIRC Subsidiary initially has a 51% ownership interest in the JV.

In exchange for the initial 49% equity interest in the JV, we, through Accuray Asia, made in-kind contributions consisting of two full radiation oncology systems from our inventory in the quarter ended December 31, 2019. The investment is reported as an Investment in unconsolidated joint venture on our condensed consolidated balance sheets. We recognized a gain of \$13.0 million related to the value of the capital contribution to the JV. This gain was recorded as non-operating, other income for the quarter ended December 31, 2019.

In July 2019, the JV broke ground on its facility based in Tianjin, China, which is expected to serve as headquarters and home of its sales organization and service operations. Also, in July 2019, the JV received the Radiation Safety License from the China Ministry of Environmental Protection. This license, along with the license to do business in China received in April 2019 and the Medical Device Operating Permit received in June 2019, enables the JV to sell and install our radiation therapy devices in China. As of June 30, 2020, the JV manufacturing facility construction is complete, with medical device approval process related to the manufacturing qualification and the required testing is expected to finish in the first calendar quarter of 2021.

With the receipt of the necessary permits and licenses to operate, the JV has begun selling products in China, much like a distributor. In the long term, we anticipate that the JV will manufacture and sell a locally branded “Made in China” radiotherapy device in the Class B license category, which would replace our current offering in that category. We believe this strategy will allow us to best maximize both near and longer-term opportunities in China.

We are applying the equity method of accounting to our ownership interest in the JV as we have the ability to exercise significant influence over the JV but lack controlling financial interest and are not the primary beneficiary. We recognize revenue on sales to the JV in the current period, eliminating a portion of profit to the extent goods sold have not been sold through by the JV to an end customer at the end of each reporting period. We will recognize the 49% proportionate share of the JV income or loss on a one-quarter lag due to the timing of the availability of the JV’s financial records.

## ***COVID-19 Pandemic***

In fiscal year 2020, an outbreak of a novel strain of coronavirus, SARS-CoV-2, which causes coronavirus disease 2019 (“COVID-19”) was identified in December 2019 in China and has subsequently been recognized as a pandemic by the World Health Organization. The COVID-19 pandemic has severely restricted the level of economic activity around the world. In response to this pandemic the governments of many countries, states, cities and other geographic regions have taken preventative or protective actions, such as imposing restrictions on travel and business operations, which has resulted in the temporary or permanent closure of certain businesses, as well as advising or requiring individuals to limit or forego their time outside of their homes. While some businesses have been able to reopen, in some cases on a restricted basis, business activity remains at significantly lower levels than prior to the pandemic. The COVID-19 pandemic has adversely impacted our business operations as well as those of our customers and partners. In addition, across the healthcare industry, resources are being prioritized for the treatment and management of the pandemic and away from non-urgent or elective procedures. Some of our customers, which include hospitals, major academic medical centers, and other related entities, have incurred losses during the COVID-19 pandemic due to significantly reduced patient volume. The public health actions being undertaken to reduce the spread of the virus have created and may continue to create significant disruptions with

respect to demand for our products and services; the operating procedures and workflow of our customers, particularly hospitals; our ability to continue to manufacture our products; and the reliability of our supply chain.

Our financial results have also been affected by the COVID-19 pandemic in various ways. The COVID-19 pandemic is adversely impacting the pace at which our backlog converts to revenue in the near-term. This is primarily the result of delays in the timing of deliveries and installations in fiscal 2020 due to timing delays caused by the COVID-19 pandemic, which resulted in a decline to our revenue for the same period. We expect that such delays in deliveries and installations will continue into fiscal 2021, which could have a negative impact on our revenue during those periods. As of the date of this Form 10-K, we have also experienced disruptions in our sales and revenue cycle as well as increases in customer defaults, delays in payment and planned installations and service agreements as a result of the effect of the COVID-19 pandemic on our customers as well as restrictions imposed on travel. We have also received requests from a few customers to extend payment terms or temporarily suspend service and corresponding payment obligations and while we have only received a small number of requests thus far, there can be no guarantee that more customers will not ask for the same if the effects of the COVID-19 pandemic deepen or worsen. As a result, we are carefully monitoring the pandemic and the resulting length and depth of the economic impact on our financial condition and results of operations, however, given the uncertainty regarding the spread and potential resurgence of COVID-19 and how long the pandemic will last, the related financial impact cannot be reasonably estimated at this time, although the impacts are expected to continue and may also significantly affect our business.

We intend to continue to execute on our strategic plans and operational initiatives during the COVID-19 pandemic. However, the extent to which our operations and financial condition are affected by COVID-19, including our ability to execute our business strategies and initiatives in the expected time frame, will largely depend on future developments that cannot be accurately predicted at this time and are uncertain, including new information that may emerge concerning the severity and scope of the COVID-19 pandemic (including whether there is a resurgence or other additional periods of increases or spikes in the number of COVID-19 cases in areas in which we operate), new or additional actions taken to contain COVID-19 or address its impact and the timing of global recovery and economic normalization, among other uncertainties and other factors identified in Part II, Item 1A “Risk Factors” in this Form 10-K, may result in delays or modifications to these plans and initiatives. Accordingly, management is carefully evaluating the Company’s liquidity position, communicating with and monitoring the actions of our customers and suppliers, and reviewing our near-term financial performance as the uncertainty related to the pandemic continues to unfold.

### ***Backlog***

Effective at the beginning of our fiscal year 2019, we updated our backlog policy to include certain upgrades sold through service contracts. As a result, the portion of the order that is recognizable as product revenue and upgrades sold on service contracts are reported as backlog. The portion of the order that is recognized as other service revenue (for example, Post-Contract Customer Support (PCS), installation, training and professional services) is not included in reported backlog. As of June 30, 2020, backlog totaled \$602.7 million, of which \$1.5 million represented upgrades sold through service contracts. As of June 30, 2019, backlog totaled \$495.6 million. The COVID-19 pandemic is adversely impacting the pace at which our backlog converts to revenue in the near-term. Although the depth and extent to which the COVID-19 pandemic is impacting individual markets varies based on a number of factors, we expect to see a higher than normal level of age-outs in the coming quarters as a result.

In order for the product portion of a system sales agreement to be counted as backlog, it must meet the following criteria:

- The contract is properly executed by both the customer and us. A customer purchase order that incorporates the terms of our contract quote will be considered equivalent to a signed and executed contract. The contract has either cleared all its contingencies or contained no contingencies when signed;
- We have received a minimum deposit or a letter of credit; or the sale is to a customer where a deposit is deemed not necessary or customary (i.e. sale to a government entity, a large hospital, group of hospitals or

cancer care group that has sufficient credit, customers with trade-in of existing equipment, sales via tender awards, or indirect channel sales that have signed contracts with end-customers);

- The specific end customer site has been identified by the customer in the written contract or written amendment; and
- Less than 2.5 years have passed since the contract met all the criteria above.

Although our backlog includes only contractual agreements with our customers for the purchase of CyberKnife Systems, TomoTherapy Systems, including Radixact Systems and related upgrades, we cannot provide assurance that we will convert backlog into recognized revenue due primarily to factors outside of our control. The amount of backlog recognized into revenue is primarily impacted by three items: cancellations, age-outs and foreign currency fluctuations. Orders could be cancelled for reasons including, without limitation, changes in customers' needs or financial condition, changes in government or health insurance reimbursement policies, or changes to regulatory requirements. In addition to cancellations, after 2.5 years, if we have not been able to recognize revenue on a contract, we remove the revenue associated with the contract from backlog and the order is considered aged out. Contracts may age-out for many reasons, including but not limited to, inability of the customer to pay, inability of the customer to adapt their facilities to accommodate our products in a timely manner, or inability to timely obtain licenses necessary for customer facilities or operation of our equipment. Our backlog also includes amounts not denominated in U.S. Dollars and therefore fluctuations in the U.S. Dollar as compared to other currencies will impact revenue. Generally, strengthening of the U.S. Dollar will negatively impact revenue. Backlog is stated at historical foreign currency exchange rates, and revenue is released from backlog at current exchange rates, with any difference recorded as a backlog adjustment.

A summary of gross orders, net orders, and order backlog is as follows (in thousands):

	Years Ended June 30,		
	2020	2019	2018
Gross orders	\$ 377,295	\$ 342,321	\$ 304,903
Net age-outs	(81,073)	(95,463)	(68,463)
Cancellations	(13,939)	(25,012)	(22,610)
Currency impacts and other	(1,746)	(3,583)	(4,296)
Net orders	<u>\$ 280,537</u>	<u>\$ 218,263</u>	<u>\$ 209,534</u>
Order backlog at the end of the period	<u>\$ 602,713</u>	<u>\$ 495,627</u>	<u>\$ 478,482</u>

### ***Gross Orders***

Gross orders are defined as the sum of new orders recorded during the period adjusted for any revisions to existing orders during the period.

Gross orders increased by \$35.0 million for the year ended June 30, 2020, as compared to the year ended June 30, 2019. This was primarily a result of an increase of \$32.1 million in new system order volume compared to the same prior year period, primarily related to a \$31.1 million increase of TomoTherapy System orders, a \$1.0 million increase in CyberKnife System orders and an increase of \$2.9 million in upgrade orders and other amendments to the terms of our contracts as compared to the same prior year period.

Gross orders increased by \$37.4 million for the year ended June 30, 2019, as compared to the year ended June 30, 2018. This was primarily a result of an increase of \$31.6 million in new system order volume compared to the same prior year period, primarily related to a \$17.5 million increase of TomoTherapy System orders, particularly Radixact System orders, a \$14.1 million increase in CyberKnife System orders and an increase of \$5.8 million in upgrade orders and other amendments to the terms of our contracts as compared to the same prior year period.

### ***Net Orders***

Net orders are defined as gross orders less cancellations, age-outs, foreign exchange and other adjustments during the period.

Net orders increased by \$62.3 million for the year ended June 30, 2020, as compared to the year ended June 30, 2019, resulting from an increase in gross orders of \$35.0 million, decreased net age-outs of \$14.4 million and cancellations of \$11.1 million, in addition to favorable impact of foreign currency exchange of \$1.8 million as compared to same to the same prior year period.

- The net age-outs for the year ended June 30, 2020 were \$81.1 million. There were \$20.5 million age-ins, which represent orders that previously aged-out but have been taken to revenue in the current period. Age-ins offset the gross amount of age-outs in a particular period.
- There were \$13.9 million and \$25.0 million in cancellations in the year ended June 30, 2020 and June 30, 2019, respectively. Cancellations are outside of our control and are difficult to forecast; however, we continue to work closely with our customers to minimize the impact of cancellations on our business. Additionally, there were \$4.1 million cancellations recorded in fiscal year 2020 related to cancellations that occurred in fiscal 2019.
- Other adjustments and foreign currency impacts decreased net orders by \$1.7 million and by \$3.6 million for the year ended June 30, 2020 and June 30, 2019, respectively.

Net orders increased by \$8.7 million for the year ended June 30, 2019, as compared to the year ended June 30, 2018, resulting from an increase in gross orders of \$37.4 million, offset by net age-outs of \$27.0 million, and cancellations of \$2.4 million.

- The net age-outs for the year ended June 30, 2019 were \$95.5 million. There were \$12.0 million age-ins, which represent orders that previously aged-out but have been taken to revenue in the current period. Age-ins offset the gross amount of age-outs in a particular period.
- There were \$25.0 million and \$22.6 million in cancellations in the year ended June 30, 2019 and June 30, 2018, respectively. Cancellations are outside of our control and are difficult to forecast; however, we continue to work closely with our customers to minimize the impact of cancellations on our business.
- Other adjustments and foreign currency impacts decreased net orders by \$3.6 million and by \$4.3 million for the year ended June 30, 2019 and June 30, 2018, respectively.

In recent years, the percentage of gross orders received from our distribution partners in the international markets represented 76%, 83%, and 70% of gross orders for fiscal year ended June 30, 2020, 2019 and 2018, respectively. We anticipate that distributor orders from international markets will continue to represent a significant portion of our gross orders in the foreseeable future. International orders are affected by foreign currency fluctuation as well as government programs that stimulate the purchase of healthcare products, both of which could affect the demand for our products and timing of orders from period to period. In addition, our order-to-revenue conversion cycle for international distributor orders has been generally longer compared to that of direct channel sales and could cause fluctuations in our age-outs from period to period.

## Results of Operations

*Fiscal 2020 results compared to 2019 (in thousands, except percentages)*

(Dollars in thousands)	2020		Years Ended June 30, 2019		change	
	Amount	%(*)	Amount	%(*)	\$	%
Products	\$ 167,302	44%	\$ 196,665	47%	\$ (29,363)	(15)%
Services	215,626	56%	222,120	53%	(6,494)	(3)%
Net revenue (a)	<u>\$ 382,928</u>	<u>100%</u>	<u>\$ 418,785</u>	<u>100%</u>	<u>\$ (35,857)</u>	<u>(9)%</u>
Gross profit	\$ 149,721	39%	\$ 162,651	39%	\$ (12,930)	(8)%

Net income (loss)	<u>\$ 3,827</u>	<u>1%</u>	<u>\$ (16,430)</u>	<u>(4)%</u>	<u>20,257</u>	<u>(123)%</u>

(\*) Expressed as a percentage of total net revenue, except for product and services gross profits which are expressed as a percentage of related product and services revenue.

(a) Includes sales to the JV, an equity method investment of \$19,054 for the year ended June 30, 2020 and \$0 for both years ended June 30, 2019 and June 30, 2018, respectively. See Note 13.

### Net revenue

#### Product Net Revenue

Product net revenue decreased by \$29.4 million, or 15%, as compared to the year ended June 30, 2019. The decrease was primarily due to a reduction in system sales of \$35.7 million from lower unit volume offset by a \$6.4 million increase in upgrades and other revenue as compared to the prior year.

#### Service Net Revenue

Service net revenue decreased by \$6.5 million, or 3%, as compared to the year ended June 30, 2019. The decrease was primarily driven by a decrease of \$4.7 million resulting from fewer upgrades purchased through our service agreements, a \$2.7 million decrease of service contract revenue, a \$0.5 million decrease in revenue from training, offset by \$1.4 million increase in revenue from installations.

As the COVID-19 pandemic is expected to continue to cause strain on the resources of our customers, coupled with recommended deferrals of non-urgent or elective procedures, we have seen delays in the timing of deliveries and installations in fiscal year 2020 and expect that such delays will continue into fiscal year 2021, which is expected to have a negative impact on our revenue during those periods. We cannot reliably estimate the extent or length to which the COVID-19 pandemic will impact deliveries and installations of our systems and as such we are unable to estimate the timing or extent of any such decline or the impact such decline will have on our revenue.

Net revenue by geographic region, based on the shipping location of our customer, is as follows (in thousands, except percentages):

	Years Ended June 30,	
	2020	2019
Net revenue	\$ 382,928	\$ 418,785
Americas	34%	32%
Europe, Middle East, India and Africa	31%	36%
Asia Pacific (excluding Japan and India)	16%	15%
Japan	19%	17%

### Gross profit

The overall gross profit margin was 39% for the years ended June 30, 2020 and 2019. Product gross margin was 43% for the year ended June 30, 2020 as compared to 41% for the year ended June 30, 2019, driven by lower cost of revenue, primarily due to product sales mix. Service revenue gross margin was 36% for the year ended June 30, 2020 as compared to 37% for the year ended June 30, 2019, primarily due to a higher service parts consumption and lower service revenue during fiscal year 2020 as compared to fiscal year 2019.

### Research and development expenses

Research and development expenses decreased by \$6.7 million, or 12%, for the year ended June 30, 2020 as compared to the year ended June 30, 2019. The decrease was primarily due to a decrease of \$3.4 million in compensation and benefits expenses due to lower headcount and related costs, a decrease of \$2.9 million in overall operational cost due to changes in the timing of project spend, a decrease of \$1.4 million due to a reduction in outsourcing expenses and consultants engaged by the Company in response to uncertainties created by the COVID-19 pandemic and a decrease of \$0.3 million in travel expenses, offset by an increase of \$1.2 million in research and development facilities expenses.

### Selling and marketing expenses

Selling and marketing expenses decreased \$8.7 million, or 16%, for the year ended June 30, 2020 as compared to the year ended June 30, 2019. The decrease was primarily due to a decrease of \$4.7 million in compensation and employee benefits including a decrease in stock-based compensation driven by lower headcount and related costs, a decrease of \$1.6 million in travel expenses due to the impact of the COVID-19 pandemic on travel, a decrease of \$1.4 million in marketing expenses driven by postponement of tradeshow, a decrease of \$0.7 million in facility cost due to consolidation of facilities and a decrease of \$0.2 million driven by lower software service and maintenance expense.

### General and administrative expenses

General and administrative expenses decreased by \$9.4 million, or 19%, for the year ended June 30, 2020 as compared to the year ended June 30, 2019. The decrease was primarily due to a decrease of \$2.6 million related to lower compensation and employee benefits costs, a decrease of \$2.6 million due to lower outside service costs related to establishment of the JV as compared to the same period last fiscal year, a benefit of \$1.7 million as a result of the conclusion of a foreign indirect tax audit, a decrease in expense for allowance for doubtful accounts of \$1.9 million, and a decrease of \$0.6 million due to lower facility and IT service costs.

### Other expense, net

Other expense, net decreased by \$8.1 million, or 54%, for the year ended June 30, 2020 as compared to the year ended June 30, 2019. The decrease was primarily due to a non-cash gain of \$13.0 million related to the value of the Accuray systems contributed to the JV in exchange for 49% equity interest, offset by an increase of \$2.9 million in net interest expense and an increase of \$1.7 million in foreign exchange losses.

## Provision for income taxes

The provision for income taxes was lower in fiscal 2020 as compared to fiscal 2019 due to lower foreign earnings in fiscal 2020. In both fiscal 2020 and 2019, we released tax benefits related to final tax assessments from the Swiss tax authorities for the period from fiscal 2018 and 2017, respectively which decreased our foreign taxes for such periods.

### *Fiscal 2019 results compared to 2018 (in thousands, except percentages)*

	Years Ended June 30,					
	2019		2018		change	
	Amount	%(*)	Amount	%(*)	\$	% change
Products	\$ 196,665	47%	\$ 183,898	45%	\$ 12,767	7%
Services	222,120	53%	220,999	55%	1,121	1%
Net revenue	\$ 418,785	100%	\$ 404,897	100%	\$ 13,888	3%
Gross profit	\$ 162,651	39%	\$ 161,695	40%	\$ 956	1%
Products gross profit	79,954	41%	80,860	44%	(906)	-1%
Services gross profit	82,697	37%	80,835	37%	1,862	2%
Research and development expenses	56,493	13%	57,251	14%	(758)	-1%
Selling and marketing expenses	55,998	13%	60,105	15%	(4,107)	-7%

Net loss	<u>\$ (16,430)</u>	<u>(4)%</u>	<u>\$ (23,899)</u>	<u>(6)%</u>	<u>\$ 7,469</u>	<u>(31)%</u>

(\*) Expressed as a percentage of total net revenue, except for product and services gross profits which are expressed as a percentage of related product and services revenue.

## Net revenue

### *Product Net Revenue*

Product net revenue increased by \$12.8 million, or 7%, as compared to the year ended June 30, 2018. The increase was due to an increase of \$34.0 million from higher unit volume sales of TomoTherapy Systems as compared to the prior year. The increase in TomoTherapy System sales was partially offset by a decrease in CyberKnife System sales of \$19.5 million and a decrease in upgrade and other revenue of \$1.7 million.

### *Service Net Revenue*

Service net revenue increased by \$1.1 million, or 1%, as compared to the year ended June 30, 2018. The increase was primarily driven by a \$3.1 million increase of service contract revenue offset by a decrease of \$2.0 million in upgrade, installation, and spare parts revenue.

Net revenue by geographic region, based on the shipping location of our customer, is as follows (in thousands, except percentages):

	Years Ended June 30,	
	2019	2018
Net revenue	\$ 418,785	\$ 404,897
Americas	32%	40%
Europe, Middle East, India and Africa	36%	27%
Asia Pacific (excluding Japan and India)	15%	15%
Japan	17%	18%

## **Gross profit**

The overall gross profit margin for the year ended June 30, 2019 was 39% as compared to the gross profit of 40% for the year ended June 30, 2018, primarily due to a decrease in product gross profit. Product gross margin was 41% for the year ended June 30, 2019 as compared to 44% for the year ended June 30, 2018, primarily due to increased sales of Radixact Systems, which have a lower profit margin than CyberKnife Systems.

## **Research and development expenses**

Research and development expenses decreased \$0.8 million, or 1%, for the year ended June 30, 2019 as compared to the year ended June 30, 2018. The decrease was primarily due to a decrease of \$2.6 million in compensation and benefits expenses due to lower headcount and a decrease in travel expenses of \$0.3 million, partially offset by a \$2.2 million expense related to a project that was terminated.

## **Selling and marketing expenses**

Selling and marketing expenses decreased \$4.1 million, or 7%, for the year ended June 30, 2019 as compared to the year ended June 30, 2018. The decrease was mainly due to a decrease of \$3.0 million in compensation expense due to reduced headcount and a reduction in travel costs of \$0.9 million.

## **General and administrative expenses**

General and administrative expenses increased \$1.4 million, or 3%, for the year ended June 30, 2019 as compared to the year ended June 30, 2018. The increase was due to an increase of \$3.6 million in bad debt expense, offset by a decrease of \$2.2 million in compensation expense due to lower headcount.

## **Other expense, net**

Other expense, net decreased \$4.3 million, or 22%, for the year ended June 30, 2019 as compared to the year ended June 30, 2018. The decrease was primarily due to a \$3.5 million decrease in loss on extinguishment of debt that occurred in fiscal 2018 as a result of the retirement of our 3.50% Convertible Notes and 3.50% Series A Convertible Notes, a \$0.4 million increase in interest income, and a \$0.3 million decrease in foreign exchange losses.

## **Provision for income taxes**

The provision for income taxes was higher in fiscal 2019 as compared to fiscal 2018 due to higher foreign earnings. In both fiscal 2019 and 2018, we released tax benefits related to final tax assessments from the Swiss tax authorities for the period from fiscal 2011 through fiscal 2017, which decreased our foreign taxes.

## **Share-Based Compensation Expense**

In fiscal 2020, 2019 and 2018, we recorded share-based compensation expense of \$8.2 million, \$10.6 million and \$12.3 million, respectively, related to awards under our stock incentive plans. Share-based compensation expense was recorded net of estimated forfeitures. As of June 30, 2020, we had approximately \$16.0 million of unrecognized compensation expense, net of estimated forfeitures, related to unvested stock options, shares under our Employee Stock Purchase Plan, or ESPP, restricted stock units, or RSUs, and market stock units, or MSUs, which we expect to recognize over a weighted average period from 0.5 to 2.89 years.

## **Liquidity and Capital Resources**

At June 30, 2020, we had \$107.6 million in cash and cash equivalents. Cash from operations could be affected by various risks and uncertainties, including, but not limited to the risks included in Part I, Item 1A titled “Risk Factors.” Also refer to Note 10, *Debt* to the consolidated financial statements for discussion of the Revolving Credit Facility, our 3.75% Convertible Notes and Term Loan outstanding as of June 30, 2020. Based on our cash and cash equivalents balance, available debt facilities, current business plan and revenue prospects, we believe that we will have sufficient cash resources and anticipated cash flows to fund our operations for at least the next 12 months.

However, we continue to critically review our liquidity and anticipated capital requirements in light of the significant uncertainty created by the COVID-19 pandemic.

Our liquidity and cash flows have been materially impacted over the last several months by the diversion of customer resources to the response to the COVID-19 pandemic and delays in payments from customers and could be further impacted by additional and prolonged delays in payments from customers, the potential of extended "shelter in place" and social distancing orders or advisories, facility closures, or other reasons related to the COVID-19 pandemic. As of the date of issuance of these consolidated financial statements, the extent to which COVID-19 is likely to materially impact our liquidity in the future remains uncertain. As precautionary measures to increase our cash position and preserve financial flexibility in view of the ongoing uncertainty resulting from the COVID-19 pandemic, we (i) executed temporary salary reductions for our Chief Executive Officer and each of our Senior Vice Presidents, which was effective June 1, 2020, (ii) eliminated all Board and committee retainers for the period beginning July 1, 2020 through December 31, 2020, (iii) eliminated all awards under the Company Bonus Plan for the fiscal 2020 performance period, other than those that were contractually guaranteed, (iv) implemented a cost saving initiative designed to reduce operating costs through the elimination of approximately 3 percent of our global workforce, (v) amended the credit and security agreements related to our Revolving Credit Facility and Term Loan to modify certain financial covenant requirements and (vi) suspended the 401(k) match program for all employees from June 1, 2020 through December 31, 2020. Additionally, to protect the health and well-being of our employees, suppliers, and customers, we have also made substantial modifications to employee travel and suspended non-essential work travel, implemented remote work arrangements as employees are advised to work from home, and cancelled or shifted most of our conferences and other marketing events to virtual through fiscal year 2021.

In addition, we are unable to predict with certainty the impact of the COVID-19 pandemic on our ability to maintain compliance with the debt covenants contained in the credit and security agreements related to our Revolving Credit Facility and Term Loan, including financial covenants regarding the fixed charge coverage ratio, minimum net revenue, minimum consolidated cash balance and minimum consolidated domestic cash balance tests. While we were in compliance with such covenants for the quarter ended June 30, 2020, failure to meet the covenant requirements in the future could cause us to be in default and the maturity of the related debt could be accelerated and become immediately payable. This may require us to obtain waivers or amendments to the applicable credit and security agreement in order to maintain compliance and there can be no certainty that any such waiver or amendment will be available, or what the cost of such waiver or amendment, if obtained, would be. If we are unable to obtain necessary waivers or amendment and the debt under such credit facility is accelerated, we would be required to obtain replacement financing at prevailing market rates, which may not be favorable to us. There is no guarantee that we would be able to satisfy our obligations if any of our indebtedness is accelerated.

Additionally, the undistributed earnings of our foreign subsidiaries at June 30, 2020 are considered to be indefinitely reinvested and unavailable for distribution in the form of dividends or otherwise. Future repatriation of the Company's foreign earnings are subject to income taxes. We anticipate that we have adequate liquidity and capital resources and would not need to repatriate earnings. As of June 30, 2020, we had approximately \$55.1 million of cash and cash equivalents at our foreign subsidiaries. If such funds were repatriated, there could be additional foreign tax withholdings imposed depending on the country from which the funds were repatriated. Our foreign earnings are deemed to be indefinitely invested outside the U.S.

## Cash Flows

	Years Ended June 30,		
	2020	2019	2018
Net cash provided by (used in) operating activities	\$ (1,469)	\$ (29,641)	\$ 18,331
Net cash provided by (used in) investing activities	(3,728)	(4,311)	17,766
Net cash provided by (used in) financing activities	26,696	28,473	(27,453)
Effect of exchange rate changes on cash, cash equivalents and restricted cash	234	124	(346)
Net increase (decrease) in cash, cash equivalents and restricted cash	<u>\$ 21,733</u>	<u>\$ (5,355)</u>	<u>\$ 8,298</u>

The COVID-19 pandemic has negatively impacted the global economy, disrupted our global supply chains and created significant volatility and disruption of financial markets all of which could negatively impact our business operations and cash flows for the foreseeable future, including reductions in revenue and delays in payments from customers. The challenges posed by COVID-19 on our business are expected to evolve rapidly. An extended period of global supply chain and economic disruption and volatility in the financial markets, could materially affect our business, results of operations, access to sources of liquidity and financial condition.

### **Cash Flows From Operating Activities**

Net cash used in operating activities was \$1.5 million in fiscal 2020, resulting primarily from a net negative change in working capital of \$21.5 million offset by non-cash items of \$16.2 million and a net income of \$3.8 million.

- Non-cash items primarily consisted of the gain on contribution to the JV of \$13.0 million, offset by depreciation and amortization expense of \$7.5 million, share-based compensation expense of \$8.2 million, non-cash interest expense on debt of \$4.2 million, inventories write-down of \$4.2 million, provision of bad debt of \$1.8 million, intra-entity profit elimination from transactions with the JV of \$1.8 million, amortization of debt issuance cost of \$1.3 million, and a loss on equity method investment of \$0.1 million;
- The net change in operating assets and liabilities of \$21.5 million was primarily due to an increase of 23.2 million in inventories due to slower than anticipated conversion of our order backlog to revenue, a decrease of \$16.2 million in compensation related accrued liabilities and reduction in bonus accrual, a decrease of \$6.8 million in accounts payable and a decrease of \$0.2 million in net operating lease liabilities offset by receivable collection and a decrease in accounts receivable of \$19.0 million, a decrease of \$4.4 million in prepaid expense and other assets and an increase of \$1.5 million in customer advances, deferred revenue and deferred cost of revenue.

Net cash used in operating activities was \$29.6 million in fiscal 2019, resulting primarily from a net change in operating assets and liabilities of \$44.6 million and non-cash items of \$31.5 million that was offset by a net loss of \$16.4 million.

- Non-cash items consisted primarily of stock-based compensation expense of \$10.6 million, depreciation and amortization expense of \$10.5 million, non-cash interest expenses on debt of \$4.9 million, provision for bad debt of \$3.7 million, and write down of inventories of \$2.3 million.
- The net change in operating assets and liabilities was primarily due to a \$46.2 million increase in accounts receivable due to the payment terms and timing of revenue transactions and cash collection, an increase of \$14.2 million in inventories to support anticipated product shipments in future periods, an increase of \$13.0 million in prepaid and other assets primarily due to incremental costs of obtaining contracts capitalized under ASC 606, and a decrease of \$2.5 million in customer advances due to the timing and receipts of new deposits. This was partially offset by an increase of \$10.7 million in accrued liabilities and an increase of \$9.5 million in accounts payable due to timing of payments.

Net cash provided by operating activities was \$18.3 million in fiscal 2018, resulting primarily from a net change in operating assets and liabilities of \$10.0 million and non-cash items of \$32.2 million that was offset by a net loss of \$23.9 million.

- Non-cash items consisted primarily of stock-based compensation expense of \$12.3 million; depreciation and amortization expense of \$9.7 million; non-cash interest expenses on debt of \$5.0 million, loss on extinguishment of debt of \$3.5 million, and write down of inventories of \$1.6 million.
- The net change in operating assets and liabilities was primarily due to a decrease of \$7.2 million in accounts receivable due to the timing of revenue transactions and cash collection, an increase of \$6.2 million in customer advances due to the timing and new deposit receipts, and a decrease of \$4.2 million in prepaid and

other assets. This was partially offset by an increase of \$8.7 million in inventory to support anticipated product shipments in future periods and a net decrease of \$2.5 million in deferred revenue.

### **Cash Flows From Investing Activities**

Net cash used in investing activities was \$3.7 million in fiscal 2020, which primarily consisted of purchases of property and equipment.

Net cash used in investing activities was \$4.3 million in fiscal 2019, which primarily consisted of purchases of property and equipment.

Net cash provided by investing activities was \$17.8 million in fiscal 2018, which primarily consisted of sales and maturities of short-term investments of \$30.3 million, offset by purchases of investments of \$5.9 million, purchases of property and equipment of \$6.3 million, and purchase of intangible assets of \$0.3 million.

### **Cash Flows From Financing Activities**

Net cash provided by financing activities during fiscal 2020 was \$26.7 million, which was primarily due to a net draw of \$24.7 million, net, drawn against our Term Loan and \$2.5 million in proceeds from our employee stock purchase plan offset by \$0.3 million, net repayments under our Revolving Credit Facility and \$0.2 million in taxes paid related to the net share settlement of equity awards.

Net cash provided by financing activities during fiscal 2019 was \$28.5 million, which was primarily due to \$20.0 million of net debt proceeds related to a draw under the Term Loan, a net \$4.6 million increase in borrowings under our Revolving Credit Facility, and \$3.9 million in proceeds from employee stock plans.

Net cash used in financing activities during fiscal 2018 was \$27.5 million, which was primarily due to \$69.8 million paid to repurchase and retire our 3.50% Convertible Notes and 3.50% Series A Convertible Notes and \$27.9 million used to pay down the Revolving Credit Facility. These expenses were offset by \$66.1 million of net debt proceeds related to the Term Loan and issuance of the 3.75% Convertible Notes and \$4.1 million in proceeds from employee stock plans.

### ***Operating Capital and Capital Expenditure Requirements***

Our future capital requirements depend on numerous factors. These factors include but are not limited to the following:

- Revenue generated by sales of our products and service plans;
- Our ability to generate cash flows;
- Costs associated with our sales and marketing initiatives and manufacturing activities;
- Facilities, equipment and IT systems required to support current and future operations;
- Rate of progress and cost of our research and development activities;
- Costs of obtaining and maintaining FDA and other regulatory clearances of our products;
- Effects of competing technological and market developments;
- Number and timing of acquisitions and other strategic transactions; and
- Servicing and maturity of our current future indebtedness.

We believe that, based on our cash and cash equivalents balance, available debt facilities, current business plan and revenue prospects, we will have sufficient cash resources and anticipated cash flows to fund our operations for

at least the next 12 months. If these sources of cash and cash equivalents are insufficient to satisfy our liquidity requirements, we may seek to sell additional equity or debt securities, enter into additional credit facilities or we may opportunistically seek to raise capital in debt or equity transactions. The sale of additional equity or convertible debt securities could result in dilution to our stockholders. If additional funds are raised through the issuance of debt securities, these securities could have rights senior to those associated with our common stock and could contain covenants that would restrict our operations. Additional financing may not be available at all, or in amounts or on terms acceptable to us. If we are unable to obtain this additional financing, we may be required to reduce the scope of our planned product development and marketing efforts.

### Contractual Obligations and Commitments

The following is a schedule summarizing our obligations to make future payments under contractual obligations as of June 30, 2020. Refer to Note 10, *Debt* in Notes to the Consolidated Financial Statements in Item 8, Part II, of this report on Form 10-K (in thousands):

	Payments due by period				
	Total	Less than 1 year	1-3 years	3-5 years	More than 5 years
3.75% Convertible Notes, Term Loan, and Revolving Credit Facility(1)(3)	\$ 202,095	\$ 2,374	\$ 141,974	\$ 57,747	\$ —
Interest on 3.75% Convertible Notes, Term Loan, and Revolving Credit Facility(2)	32,115	12,554	16,778	2,783	—
Operating leases	35,906	9,449	17,640	8,817	—
Total	<u>\$ 270,116</u>	<u>\$ 24,377</u>	<u>\$ 176,392</u>	<u>\$ 69,347</u>	<u>\$ —</u>

- (1) Any conversion, redemption or purchase of our convertible notes would impact our cash payments noted in this table. Please see Note 10, *Debt*, to the consolidated financial statements for further information. Amounts presented are for principal only.
- (2) Interest on the Term Loan and Revolving Credit Facility are accrued at 7% and 6% per annum, respectively, which may vary in subsequent periods based upon LIBOR.
- (3) On July 3, 2020 the Company amended the Revolving Credit Facility Agreement and Term Loan Agreement which, among other things modified certain financial covenants related to the Fixed Charge Coverage Ratio, minimum consolidated Net Revenue and minimum consolidated cash balance. Other significant terms remained unchanged. In addition, the Company agreed to prepay \$10.0 million principal with respect to the Term Loan as well as an amendment fee of \$0.5 million, both of which were paid on July 3, 2020.

Our purchase commitments and obligations include all open purchase orders and contractual obligations in the ordinary course of business, including commitments with contract manufacturers and suppliers, for which we have not received the goods or services and acquisition and licensing of intellectual property. A majority of these purchase obligations are due within a year. Although open purchase orders are considered enforceable and legally binding, the terms generally allow us the option to cancel, reschedule, and adjust our requirements based on our business needs prior to the delivery of goods or performance of services, and hence, have not been included in the table above.

### Off Balance Sheet Arrangements

We do not have any off balance sheet arrangements for the years ended June 30, 2020, 2019, or 2018.

### Critical Accounting Policies and Estimates

The discussion and analysis of our financial condition and results of operations is based on our consolidated financial statements, which have been prepared in accordance with accounting principles generally accepted in the United States of America (U.S. GAAP). The preparation of these consolidated financial statements requires management to make estimates and judgments that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the consolidated financial statements, as well as revenue and expenses during the reporting periods. We evaluate our estimates and judgments on an ongoing basis. We base

our estimates on historical experience and on various other factors we believe are reasonable under the circumstances, the results of which form the basis for making judgments about the carrying value of assets and liabilities. However, the economic uncertainty in the current environment caused by the COVID-19 pandemic could limit our ability to accurately make and evaluate our estimates and judgments. Actual results could therefore differ materially from those estimates if actual conditions differ from our assumptions.

All of our significant accounting policies and methods used in the preparation of our consolidated financial statements are described in Note 1, *The Company and its Significant Accounting Policies*, to the consolidated financial statements. The methods, estimates and judgments that we use in applying our accounting policies require us to make difficult and subjective judgments, often as a result of the need to make estimates regarding matters that are inherently uncertain. Management believes the critical accounting policies and estimates are those related to revenue recognition, business combinations and assessment of recoverability of goodwill and intangible assets, valuation of inventories, share-based compensation expense, convertible notes, income taxes, allowance for doubtful accounts and loss contingencies.

### **Concentration of Credit and Other Risks**

Our cash and cash equivalents are deposited with several major financial institutions. At times, deposits in these institutions exceed the amount of insurance provided on such deposits. We have not experienced any losses in such accounts and do not believe that we are exposed to any significant risk of loss on these balances.

For the years ended June 30, 2020, 2019, and 2018, there were no customers that represented 10% or more of total net revenue. We had one customer at June 30, 2020 and June 30, 2019, respectively that accounted for more than 10% of our total accounts receivable, net.

We perform ongoing credit evaluations of our customers and maintain reserves for potential credit losses. Accounts receivable are deemed past due in accordance with the contractual terms of the agreement. Accounts receivable balances are charged against the allowance for doubtful accounts once collection efforts are unsuccessful.

Single-source suppliers presently provide us with several components. In most cases, if a supplier was unable to deliver these components, we believe that we would be able to find other sources for these components subject to any regulatory qualifications, if required.

### **Revenue Recognition**

Our revenue is primarily derived from sales of CyberKnife and TomoTherapy Systems and services, which include PCS, installation services, training and other professional services. We record our revenue net of any value added or sales tax. We recognize revenue for certain performance obligations at the point in time when control is transferred, such as delivery of products. We recognize revenue for certain other performance obligations over a period of time as control of the goods or services is transferred, such as PCS and construction contracts. Payments received in advance of system shipment are recorded as customer advances and are deferred until product shipment when they are recognized in revenue. We assess the probability of collection based on a number of factors, including past transaction history with the customer and credit-worthiness of the customer. We generally do not request collateral from our customers.

We frequently enter into sales arrangements that contain multiple elements or deliverables. For sale arrangements that contain multiple elements, we account for individual products and services separately if a product or service is separately identifiable from other items in the bundled package and if a customer can benefit from it on its own or with other resources that are readily available to the customer. The stand-alone selling price (“SSP”) is determined based on observable prices at which we separately sell the products and services. If an SSP is not directly observable, then we will estimate the SSP considering market conditions, entity-specific factors, and information about the customer or class of customer that is reasonably available.

#### *Product Revenue*

The majority of product revenue is generated from sales of CyberKnife and TomoTherapy Systems, including Radixact Systems. Revenue is recognized once the performance obligations are satisfied by transferring control of the product to a customer, which is generally upon delivery.

We record revenue from sales of systems, product upgrades and accessories to our customers based on the general terms and conditions of the executed sales and distribution agreements as well as the specific terms and conditions executed for each sale, and once the performance obligations are satisfied by transferring control of the product to a customer.

We record revenue considering all discounts given to, or expected by, customers. As a result, management may make estimates of potential future product returns or trade ins and other allowances related to product revenue in the current period. In general, we do not allow returns from customers and all discounts and allowances are clearly identified in the terms and conditions of each sale. We derive some product revenue from sale to the JV.

### *Service Revenue*

Service revenue is generated primarily from PCS contracts (warranty period services and post warranty services), installation services, training and professional services. Service revenue is recognized either ratably over the contractual period as control and benefit transfer to the customer or when service is performed, depending on specific terms and conditions in agreements with customers. We derive some service revenue from sale to the JV.

Costs associated with service revenue are expensed when incurred, except when those costs are related to system upgrades purchased within a service contract. In those cases, the costs of such upgrades are recognized at the time the upgrade revenue is recognized.

### *Assessment of Recoverability of Goodwill and Intangible Assets*

Goodwill represents the excess of the purchase price over the fair value of tangible and identified intangible net assets of businesses acquired. Goodwill is not amortized, but is evaluated for impairment on an annual basis and when impairment indicators are present. We have one operating segment and one reporting unit. Therefore, our consolidated net assets, including existing goodwill and other intangible assets, are considered to be the carrying value of the reporting unit. We estimate the fair value of the reporting unit based on the closing price of our common stock on the trading day closest to the annual review date multiplied by the outstanding shares on that date. If the carrying value of the reporting unit is in excess of its fair value, an impairment may exist, and we must perform the second step of the analysis, in which the implied fair value of the goodwill is compared to its carrying value to determine the impairment charge, if any. If the estimated fair value of the reporting unit exceeds the carrying value of the reporting unit, goodwill is not impaired and no further analysis is required.

We make judgments about the recoverability of purchased intangible assets with finite lives whenever events or changes in circumstances indicate that impairment may exist. Recoverability of purchased intangible assets with finite lives is measured by comparing the carrying amount of the asset to the future undiscounted cash flows the asset is expected to generate. Impairment, if any, is measured as the amount by which the carrying value exceeds the fair value of the impaired asset. We review indefinite-lived intangible assets for impairment annually or whenever events or changes in circumstances indicate the carrying value may not be recoverable. If the asset is considered to be impaired, the amount of any impairment is measured as the difference between the carrying value and the fair value of the impaired asset.

Assumptions and estimates about future values and remaining useful lives of our purchased intangible assets are complex and subjective. They can be affected by a variety of factors, including external factors such as industry and economic trends and internal factors such as changes in our business strategy and our internal forecasts.

### *Valuation of Inventories*

The valuation of inventory requires us to estimate obsolete or excess inventory as well as damaged inventory. The determination of obsolete or excess inventory requires us to estimate the future demand for our products. We regularly review inventory quantities on hand and adjust for excess and obsolete inventory based primarily on historical usage rates and our estimates of product demand to support future sales and service. If our demand forecast for specific products is greater than actual demand and we fail to reduce purchasing and manufacturing output accordingly, we could be required to write off inventory beyond the current reserve, which would negatively impact our gross margin.

### ***Share-Based Compensation Expense***

We use the Black-Scholes option valuation model to estimate the fair value of stock options and ESPP shares. This valuation model requires the input of highly subjective assumptions, the most significant of which is our estimates of expected volatility and the expected term of the award. Our expected volatility is derived from the historical volatilities of our common stock. We estimate the expected term of stock option by taking the average of the vesting term and the contractual term of the option, as illustrated by the simplified method. We use the Monte-Carlo simulation model to estimate the fair value of Market Stock Units (MSUs). The assumptions used in calculating the fair value of share-based payment awards represent management's best estimates, but these estimates involve inherent uncertainties and the application of management judgment. As a result, if factors change and we use different assumptions, our share-based compensation expense could be materially different in the future.

We recognize compensation cost for only those shares expected to vest over the requisite service period of the award. We estimate our forfeiture rate based on an analysis of our actual forfeitures and will continue to evaluate the appropriateness of the forfeiture rate based on recent forfeiture activity and expected future employee turnover. Changes in the estimated forfeiture rate can have a significant effect on reported share-based compensation expense, as the cumulative effect of adjusting the rate for all expense amortization is recognized in the period the forfeiture estimate is changed.

### ***Convertible Notes***

We account for convertible notes in accordance with applicable guidance which specifies that an issuer of such instruments should separately account for the liability and equity component of the conversion option. The amount recorded as debt is based on the fair value of the debt component as a standalone instrument, determined using an average interest rate for similar nonconvertible debt issued by entities with credit ratings comparable to ours at the time of issuance. The difference between the debt recorded at inception and its principal amount is accreted to principal during the estimated life of the note. ASC 470-50, provides guidance on modifications to or exchanges of line-of-credit or revolving arrangements which should be evaluated based on borrowing.

### ***Leases***

We are the lessee in a lease contract when we obtain the right to use the asset. Operating leases are included in the line items right-of-use asset, lease obligation, current, and lease obligation, long-term in the consolidated balance sheet. Right-of-use asset represents our right to use an underlying asset for the lease term and lease obligations represent our obligation to make lease payments arising from the lease, both of which are recognized based on the present value of the future minimum lease payments over the lease term at the commencement date. Leases with a lease term of 12 months or less at inception are not recorded on the consolidated balance sheet and are expensed on a straight-line basis over the lease term in our consolidated statement of income. We determine the lease term by agreement with lessor. As our lease does not provide an implicit interest rate, we use our incremental borrowing rate based on the information available at commencement date in determining the present value of future payments.

Refer to Note 2. Recent Accounting Pronouncements and Note 5. Leases to our consolidated financial statements included in this Annual Report on Form 10-K for further information on our adoption of ASC 842.

### ***Income Taxes***

We determine our current and deferred tax provisions based on estimates and assumptions that could differ from the actual results reflected in our income tax returns filed during the subsequent year. We record adjustments based on filed returns when we have identified and finalized them, which is generally in the fourth quarter of the subsequent year for U.S. federal and state provisions. We have placed a full valuation allowance on all net U.S. deferred tax assets because realization of these tax benefits through future taxable income cannot be reasonably assured. We intend to maintain the valuation allowance until sufficient positive evidence exists to support the reversal of the valuation allowance. Any decision to reverse part or all of the valuation allowance would be based on our estimate of future profitability. If our estimate were to be wrong, we could be required to charge potentially significant amounts to income tax expense to establish a new valuation allowance.

Our effective tax rate does not include the impact of undistributed foreign earnings for which we have not provided income taxes related to foreign tax withholdings because we plan to reinvest such earnings indefinitely outside the United States. We have estimated whether there is a need for foreign earnings remittance amounts based

on projected cash flow needs as well as the working capital and long-term investment requirements of our foreign subsidiaries and our domestic operations. Material changes in our estimates of cash, working capital and long-term investment requirements in the various jurisdictions in which we do business could impact our effective tax rate. We are subject to income taxes in the United States and certain foreign countries, and we are subject to corporate income tax audits in some of these jurisdictions. We believe that our tax return positions are fully supported, but tax authorities are likely to challenge certain positions, which may not be fully sustained. However, our income tax expense includes amounts intended to satisfy income tax assessments that result from these challenges. Determining the income tax expense for these potential assessments and recording the related assets and liabilities requires management judgments and estimates. We evaluate our uncertain tax positions in accordance with the guidance for accounting for uncertainty in income taxes. We believe that our reserve for uncertain tax positions is adequate. We review our reserves quarterly, and we may adjust such reserves because of proposed assessments by tax authorities, changes in facts and circumstances, issuance of new regulations or new case law, previously unavailable information obtained during the course of an examination, negotiations between tax authorities of different countries concerning our transfer prices, or the expiration of statutes of limitations.

### ***Allowance for Doubtful Accounts***

We evaluate the creditworthiness of our customers prior to authorizing shipment for all major sale transactions. On a quarterly basis, we evaluate aged items in the accounts receivable aging report and provide an allowance in an amount we deem adequate for doubtful accounts. If our evaluation of our customers' financial conditions does not reflect our future ability to collect outstanding receivables, additional provisions may be needed and our operating results could be negatively affected.

### ***Loss Contingencies***

As discussed in Note 9. *Commitments and Contingencies*, to the consolidated financial statements, we are involved in various lawsuits, claims and proceedings that arise in the ordinary course of business. We record a provision for a liability when we believe that it is both probable that a liability has been incurred and the amount can be reasonably estimated. We provide disclosure if it is reasonably possible that a loss has been incurred and a range of loss or possible loss can be reasonably estimated. Significant judgment is required to determine both probability and the estimated amount. We review these provisions at least quarterly and adjust these provisions to reflect the impact of negotiations, settlements, rulings, advice of legal counsel, and updated information. Litigation is inherently unpredictable and is subject to significant uncertainties, some of which are beyond our control. Should any of these estimates and assumptions change or prove to have been incorrect, we could incur significant charges related to legal matters which could have a material impact on our results of operations, financial position and cash flows.

## **Item 7A. QUANTITATIVE & QUALITATIVE DISCLOSURES ABOUT MARKET RISK**

We do not utilize derivative financial instruments, derivative commodity instruments or other market risk sensitive instruments, positions or transactions.

### ***Foreign Currency Exchange Rate Risk***

A portion of our net sales are denominated in foreign currencies, most notably the Euro and the Japanese Yen. Future fluctuations in the value of the U.S. Dollar may affect the price competitiveness of our products outside the United States. For direct sales outside the United States, we sell in both U.S. Dollars and local currencies, which could expose us to additional foreign currency risks, including changes in currency exchange rates. Our operating expenses in countries outside the United States, are payable in foreign currencies and therefore expose us to currency risk. To the extent that management can predict the timing of payments under sales contracts or for operating expenses that are denominated in foreign currencies, we may engage in hedging transactions to mitigate such risks in the future. We expect the changes in the fair value of the net foreign currency assets arising from fluctuations in foreign currency exchange rates to be materially offset by the changes in the fair value of the forward contracts. As of June 30, 2020, we had no open forward contracts and all open positions had been settled.

The purpose of these forward contracts is to minimize the risk associated with foreign exchange rate fluctuations. We have developed a foreign exchange policy to govern our forward contracts. These foreign currency forward contracts do not qualify as cash flow hedges and all changes in fair value are reported in earnings as part of other expenses, net. We have not entered into any other types of derivative financial instruments for trading or speculative

purpose. Our foreign currency forward contract valuation inputs are based on quoted prices and quoted pricing intervals from public data and do not involve management judgment.

### ***Interest Rate Risk***

We maintain an investment portfolio of various holdings, types and maturities. These securities are generally classified as available for sale and consequently are recorded on the balance sheet at fair value with unrealized gains and losses reported as a separate component of accumulated other comprehensive income. At any time, a sharp rise or decline in interest rates could have a material adverse impact on the fair value of our investment portfolio. Likewise, increases and decreases in interest rates could have had a material impact on interest earnings for our portfolio. We do not currently carry investments that are sensitive to interest rate risk.

Our debt obligations consist of a variety of financial instruments that expose us to interest rate risk, including, but not limited to the Credit Facilities and the 3.75% Convertible Notes. The interest rates on the 3.75% Convertible Notes are fixed and the interest rate on the Credit Facilities are at variable rates, which are tied to a “prime rate” and LIBOR. As of June 30, 2020, borrowings under the Term Loan totaled \$89.1 million with an annual interest rate of 6.75% plus 90-day LIBOR, and borrowings under the Revolving Credit Facility totaled \$28.0 million with an annual interest rate of 4.50% plus 90-day LIBOR. If the amount outstanding under the Credit Facilities remained at this level for the next 12 months and interest rates increased or decreased by 50 basis point change, our annual interest expense would increase or decrease, respectively, approximately \$0.6 million. Refer to Note 10, *Debt* to our consolidated financial statements included in this Annual Report on Form 10-K for a discussion regarding our debt obligations.

### ***Equity Price Risk***

On August 7, 2017, we issued approximately \$85.0 million aggregate principal amount of 3.75% Convertible Notes. Upon conversion, we can settle the obligation by issuing our common stock, cash or a combination thereof at an initial conversion rate equal to 174.8252 shares of common stock per \$1,000 principal amount of the 3.75% Convertible Notes, which is equivalent to a conversion price of approximately \$5.72 per share of common stock, subject to adjustment. There is no equity price risk if the share price of our common stock is below \$5.72 upon conversion of the 3.75% Convertible Notes. For every \$1 that the share price of our common stock exceeds \$5.72, we expect to issue an additional \$14.9 million in cash or shares of our common stock, or a combination thereof, if all of the 3.75% Convertible Notes are converted.

## REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

Board of Directors and Stockholders  
Accuray Incorporated

### **Opinion on the financial statements**

We have audited the accompanying consolidated balance sheets of Accuray Incorporated (a Delaware corporation) and subsidiaries (the “Company”) as of June 30, 2020 and 2019, the related consolidated statements of operations and comprehensive income (loss), stockholders’ equity, and cash flows for each of the three years in the period ended June 30, 2020, and the related notes (collectively referred to as the “financial statements”). In our opinion, the financial statements present fairly, in all material respects, the financial position of the Company as of June 30, 2020 and 2019, and the results of its operations and its cash flows for each of the three years in the period ended June 30, 2020, in conformity with accounting principles generally accepted in the United States of America.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) (“PCAOB”), the Company’s internal control over financial reporting as of June 30, 2020, based on criteria established in the 2013 *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (“COSO”), and our report dated August 25, 2020 expressed an unqualified opinion.

### **Adoption of New Accounting Standard**

As discussed in Note 1 to the consolidated financial statements, the Company has changed its method of accounting for revenue from contracts with customers and for incremental costs to obtain contracts with customers effective July 1, 2018, due to the adoption of ASU No. 2014-09 – Topic 606, *Revenue from Contracts with Customers*. The Company adopted this new standard using a modified retrospective approach.

### **Basis for opinion**

These financial statements are the responsibility of the Company’s management. Our responsibility is to express an opinion on the Company’s financial statements based on our audits. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

/s/ GRANT THORNTON LLP

We have served as the Company’s auditor since 2006.

The accompanying notes are an integral part of these consolidated financial statements.

**Accuray Incorporated**  
**Notes to Consolidated Financial Statements**

**Note 1. The Company and its Significant Accounting Policies**

**The Company**

Accuray Incorporated (together with its subsidiaries, the “Company” or “Accuray”) designs, develops and sells advanced radiosurgery and radiation therapy systems for the treatment of tumors throughout the body. The Company is incorporated in Delaware and has its principal place of business in Sunnyvale, California. The Company has primary offices in the United States, Switzerland, China, Hong Kong and Japan and conducts its business worldwide.

**Basis of Presentation and Principles of Consolidation**

The consolidated financial statements include the accounts of the Company and its wholly-owned subsidiaries. All significant inter-company transactions and balances have been eliminated in consolidation.

The accompanying consolidated financial statements have been prepared in accordance with United States accounting generally accepted accounting principles (“GAAP”), pursuant to the rules and regulations of the Securities and Exchange Commission (the “SEC”).

**Risks and Uncertainties**

The Company is subject to risks and uncertainties as a result of the coronavirus disease (“COVID-19”) pandemic. The extent of the impact of the COVID-19 pandemic on the Company's business is highly uncertain and difficult to predict, as the effects of and response to the pandemic are rapidly evolving and new information is regularly coming to light. The Company's customers are diverting resources to treat COVID-19 patients and deferring non-urgent and elective procedures, both of which are likely to impact customers' ability to meet their other financial obligations, including to the Company. Some customers, which include hospitals, major academic medical centers, and other related entities, have incurred significant losses during the COVID-19 pandemic due to reduced patient volume. Furthermore, the Company is also anticipating a global economic slowdown due to disruptions caused by the COVID-19 pandemic, which may result in an incremental adverse impact on revenue, net income and cash flow and may require significant additional expenditures to mitigate such impacts. Policymakers around the globe have responded with fiscal policy actions to support the healthcare industry and economy as a whole. The magnitude and overall effectiveness of these actions remain uncertain.

The Company's financial results have also been affected by the COVID-19 pandemic in various ways. The COVID-19 pandemic is adversely impacting the pace at which the backlog converts to revenue in the near-term. This is primarily the result of delays in the timing of deliveries and installations in fiscal 2020 due to timing delays caused by the COVID-19 pandemic, which resulted in a decline in the revenue for the same period. The Company expects that such delays in deliveries and installations will continue into fiscal 2021, which could have a negative impact on the revenue during those periods. As of the date of this Form 10-K, the Company experienced disruptions in the sales and revenue cycle as well as increases in customer defaults, delays in payment and planned installations and service agreements as a result of the effect of the COVID-19 pandemic on the Company's customers as well as restrictions imposed on travel. The Company also received requests from a few customers to extend payment terms or temporarily suspend service and corresponding payment obligations and while the Company have only received a small number of requests thus far, there can be no guarantee that more customers will not ask for the same if the effects of the COVID-19 pandemic deepen or worsen. As a result, the Company is carefully monitoring the pandemic and the resulting length and depth of the economic impact on our financial condition and results of operations, however, given the uncertainty regarding the spread and potential resurgence of COVID-19 and how long the pandemic will last, the related financial impact cannot be reasonably estimated at this time, although the impacts are expected to continue and may also significantly affect the Company's business.

The Company continues to critically review its liquidity and anticipated capital requirements in light of the significant uncertainty created by the COVID-19 pandemic. Based on the Company's cash and cash equivalents balance, available debt facilities, current business plan and revenue prospects, the Company believes that it will have sufficient cash resources and anticipated cash flows to fund its operations for at least the next 12 months. In addition, the Company is unable to predict with certainty the impact of the COVID-19 pandemic on its ability to maintain compliance with the debt covenants contained in the credit and security agreements related to its Revolving Credit Facility and Term Loan (as such terms are defined in Note 10 below), including financial covenants regarding the fixed charge coverage ratio, minimum net revenue, minimum consolidated cash balance and minimum consolidated domestic cash balance tests. The Company was in compliance with such covenants for the quarter ended June 30, 2020, as amended. Failure to meet the covenant requirements in the future could cause the Company to be in default and the maturity of the related debt could be accelerated and become immediately payable. Refer to Note 19 *Subsequent Events*, for further details related to the change of financial covenants. This may require the Company to obtain waivers or amendments to the applicable credit and security agreement in order to maintain compliance and there can be no certainty that any such waiver or amendment will be available, or what the cost of such waiver or amendment, if obtained, would be. If the Company is unable to obtain necessary waivers or amendment and the debt under such credit facility is accelerated, the Company would be required to obtain replacement financing at prevailing market rates, which may not be favorable to the Company. There is no guarantee that the Company would be able to satisfy its obligations if any of its indebtedness is accelerated.

### **Use of Estimates**

The preparation of consolidated financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues, expenses, and related disclosures at the date of the financial statements. Key estimates and assumptions made by the Company relate to revenue recognition, assessment of recoverability of goodwill and intangible assets, valuation of our equity method investment in the JV, valuation of inventories, share-based compensation expense, convertible notes, income taxes, allowance for doubtful accounts and loss contingencies. Actual results could differ materially from those estimates.

### **Foreign Currency**

The Company's international subsidiaries use their local currencies as their functional currencies. For those subsidiaries, assets and liabilities are translated at exchange rates in effect at the balance sheet date and income and expense accounts at the average exchange rate. Resulting translation adjustments are excluded from the determination of net loss and are recorded in accumulated other comprehensive loss as a separate component of stockholders' equity. Net foreign currency exchange transaction gains or losses are included as a component of other expense, net, in the Company's consolidated statements of operations and comprehensive income (loss).

### **Fair Value Measurements**

The carrying values of the Company's financial instruments including cash equivalents, restricted cash, accounts receivable and accounts payable are approximately equal to their respective fair values due to the relatively short-term nature of these instruments. Also refer to Note 8, *Fair Value Measurements*, for further details.

### **Cash and Cash Equivalents**

The Company considers currency on hand, demand deposits, time deposits, and all highly liquid investments with an original maturity of three months or less at the date of purchase to be cash and cash equivalents. Cash and cash equivalents are held in various financial institutions in the United States and internationally.

### **Concentration of Credit Risk and Other Risks and Uncertainties**

The Company's cash and cash equivalents are mainly deposited with several major financial institutions. At times, deposits in these institutions exceed the amount of insurance provided on such deposits. The Company has not experienced any losses in such accounts and believes that it is not exposed to any significant risk on these balances.

The Company had no customer that represented 10% or more of total net revenue for the years ended June 30, 2020, 2019 and 2018. The Company had one customer at June 30, 2020 and June 30, 2019, respectively that accounted for more than 10% of accounts receivable, net.

The Company performs ongoing credit evaluations of its customers and maintains reserves for potential credit losses. Accounts receivable are deemed past due in accordance with the contractual terms of the agreement. Accounts are charged against the allowance for doubtful accounts once collection efforts are unsuccessful. Historically, such losses have been within management's expectations.

Single-source suppliers presently provide the Company with several components. In most cases, if a supplier was unable to deliver these components, the Company believes that it would be able to find other sources for these components subject to any regulatory qualifications, if required.

### **Restricted Cash**

Restricted cash primarily consists of cash that is temporarily held in bank accounts which are under the control of the lender to the Revolving Credit Facility, certificates of deposit held as guarantees in connection with customer contracts and corporate leases as well as funds held as guarantees for Value-Added Tax (VAT) obligations in a foreign jurisdiction.

### **Inventories**

Inventories are stated at the lower of cost (on a first-in, first-out basis) or net realizable value. Excess and obsolete inventories are written down based on historical sales and forecasted demand, as judged by management.

### **Revenue Recognition**

The Company adopted ASC Topic 606, Revenue from Contracts with Customers, on July 1, 2018. The Company's revenue consists of product revenue resulting from the sale of systems, system upgrades and service revenue. The Company accounts for a contract with a customer when there is a legally enforceable contract between the Company and its customer, the rights of the parties are identified, the contract has commercial substance, and collectability of the contract consideration is probable. The Company's revenues are measured based on the consideration specified in the contract with each customer, net of any discounts and taxes collected from customers that are remitted to government authorities.

The Company's revenue is primarily derived from sales of CyberKnife and TomoTherapy Systems and services, which include post-contract customer support ("PCS"), installation services, training and other professional services.

The majority of the Company's revenue arrangements consists of multiple performance obligations, which can include system, upgrades, installation, training, services, construction, and consumables. For bundled arrangements, the Company accounts for individual products and services separately if a product or service is separately identifiable from other items in the bundled package and if a customer can benefit from it on its own or with other resources that are readily available to the customer.

The Company's products are generally sold without a right of return, and the Company's contracts generally provide a fixed transaction price. The Company may offer incentives in the form of discounts, including volume system discounts, which are included in the contract and used to calculate the final fixed price of the arrangement. These discounts may pertain to all performance obligations in a specific contract or may be allocated to a specific performance obligation. The Company also from time to time offers extended payment terms beyond one year and commissions or other forms of payment to customers. The Company estimates a financing component in transactions with payment terms extending beyond one year. This financing component is recognized as financing income at the time payment is received. The Company applies the practical expedient to not adjust for a significant financing component if the gap between payment and delivery was expected, at the contract inception, to be less than one year.

The Company offers customers the opportunity to trade in their older systems for credit towards the purchase of a new system. The Company generally does not provide specific trade-in prices or upgrade rights at the time of purchase of the original system. Trade-in or upgrade transactions are based on the then fair value of the system and are separately negotiated taking into consideration circumstances existing at the time of the trade-in or upgrade. Accordingly, trade-ins and upgrades are not considered separate performance obligations in system sales agreements. Traded-in systems generally can be reconditioned and may be resold. The Company accounts for the fair value of the traded-in system in the total consideration in the arrangement by including the net realizable value of the traded-in system less a normal profit margin.

The stand-alone selling price (“SSP”) of performance obligations is determined based on observable prices at which the Company separately sells the products and services. If the SSP is not directly observable, then the Company will estimate the SSP considering market conditions, entity-specific factors, and information about the customer or class of customer that is reasonably available. The SSP is generally assessed as a percentage of the list price. The contract consideration allocation is based on the SSP at contract inception. The consideration (net of any discounts) is allocated among separate products and services in a bundle based on their individual SSP. For contract modifications that add additional goods or services or changes pricing, the most recent SSP is used for allocation to the remaining performance obligations.

The Company recognizes revenue for certain performance obligations at the point in time when control is transferred, such as delivery of products and upgrades. Service revenue is recognized over the term of the service period as the customer benefits from the services throughout the service period. Revenue related to services performed on a time-and-materials basis is recognized when performed. Services recognized over a period of time comprise a single stand-ready performance obligation satisfied over time as our customers simultaneously receive and consume benefits from the Company's performance. This performance obligation constitutes a series of services that are substantially the same and provided over time using the same measure of progress. Revenues derived from these arrangements are recognized over time using an output method based upon the passage of time as this provides a faithful depiction of the pattern of transfer of control.

The Company recognizes an asset for the incremental costs of obtaining a contract with a customer when the Company expects to generate future economic benefits from the related revenue-generating contracts. The Company capitalizes incremental contract acquisition costs, and amortizes such costs over a five year period, the period which the Company expects to benefit, based on historical service renewal rates, and expectations of future customer renewals. Most of the Company's contract costs are associated with its internal sales force compensation program and a portion of its employee bonus program. The Company capitalizes and amortizes the incremental costs of obtaining a contract, primarily related to certain bonuses and sales commissions. The capitalized bonuses and sales commissions are amortized over a period of five years commencing upon the initial transfer of control of the system to the customer. The pattern of amortization is commensurate with the pattern of transfer of control of the performance obligations to the customer. The amortization of these contract assets is included in cost of sales, research and development, sales and marketing, and general and administrative expenses based on department headcount allocations in the consolidated statements of operations. The pattern of amortization is commensurate with the pattern of transfer of control of the performance obligations to the customer. The Company elected to use the practical expedient and expense as incurred commissions related to service renewals and upgrades because the contract term is less than a year.

The Company invoices its customers based on the billing schedules in its sales arrangements. Payment terms vary from 30 to 90 days, or longer, from the date of invoice. Contract assets for the periods presented primarily represent the difference between the revenue that was recognized based on the relative standalone selling price of the related performance obligations satisfied and the contractual billing terms. Deferred revenue for periods presented primarily relates to service contracts where the service fees are billed up-front, generally quarterly or annually, prior to services being performed. The associated deferred revenue is generally recognized over the term of the service period. The Company did not have any significant impairment losses on its contract assets for any period presented.

## **Deferred Revenue**

Deferred revenue primarily consists of unfulfilled obligations from open contracts for which performance has already started including short-shipped items, deferred warranty, training, maintenance services and other unperformed or incomplete performance obligations. Service contracts for maintenance services, in general, are considered month-to-month contracts. Deferred revenue includes deferred warranty expected to be recognized over the remaining warranty period for system already installed. The Company's balance sheet may include the unbilled receivable for warranty included under the deferred revenue leading to a temporary gross up of the Company's balance sheet. The invoices for unbilled receivables are issued within period shorter than 12 months.

## **Customer Advances**

Customer advances represent payments made by customers in advance of product shipment. In general, customer advances are required for a contract to be recognized in our backlog.

## **Property and Equipment**

Property and equipment are stated at cost and are depreciated using the straight-line method over the estimated useful lives of the related assets. Leasehold improvements are depreciated on a straight-line basis over the remaining term of the lease or the estimated useful life of the asset, whichever is shorter. Machinery and equipment are depreciated over five years. Furniture and fixtures are depreciated over four years. Computer and office equipment and computer software are depreciated over three years. Repairs and maintenance costs, which are not considered improvements and do not extend the useful life of the property and equipment, are expensed as incurred.

## **Software Capitalization Costs**

Costs for the development of new software products and substantial enhancements to existing software products are expensed as incurred until technological feasibility has been established, at which time any additional costs would be capitalized. No costs associated with the development of software have been capitalized as the Company believes its current software development process is essentially completed concurrent with the establishment of technological feasibility.

## **Impairment of Long-Lived Assets**

The Company reviews long-lived assets, including intangible assets, equity method investment in the JV, property and equipment, for impairment whenever events or changes in business circumstances indicate that the carrying amount of the assets may not be fully recoverable using pretax undiscounted cash flows. Impairment, if any, is measured as the amount by which the carrying value of a long-lived asset exceeds its fair value.

## **Goodwill and Purchased Intangible Assets**

Goodwill is not amortized, but is evaluated for impairment on an annual basis and when impairment indicators are present. The Company has assessed that it has one operating segment and one reporting unit, and the consolidated net assets, including existing goodwill and other intangible assets, are considered to be the carrying value of the reporting unit. The Company estimates the fair value of the reporting unit based on the Company's closing stock price on the trading day closest to the annual review date multiplied by the outstanding shares on that date. If the carrying value of the reporting unit is in excess of its fair value, an impairment may exist, and the Company must perform the second step of the analysis, in which the implied fair value of the goodwill is compared to its carrying value to determine the impairment charge, if any. If the estimated fair value of the reporting unit exceeds the carrying value of the reporting unit, goodwill is not impaired and no further analysis is required. The Company adopted the new accounting guidance that simplifies the testing for goodwill impairment in the first quarter of fiscal 2020. There was no impairment of goodwill identified in the fiscal years ended June 30, 2020, 2019 and 2018.

Purchased intangible assets other than goodwill, including developed technology are amortized on a straight-line basis over their estimated useful lives unless their lives are determined to be indefinite. Purchased intangible assets are carried at cost, less accumulated amortization. Amortization is computed over the estimated useful lives of the respective assets which range from approximately one to seven years.

### **Shipping and Handling**

The Company's billings for shipping and handling for product shipments to customers are included in cost of products. Shipping and handling costs incurred for inventory purchases are capitalized in inventory and expensed in cost of products.

### **Advertising Expenses**

The Company expenses the costs of advertising and promoting its products and services as incurred. Advertising expenses were approximately \$0.2 million, \$0.5 million and \$0.4 million for the years ended June 30, 2020, 2019 and 2018, respectively, and are included in selling and marketing expense in the consolidated statements of operations.

### **Research and Development Costs**

Costs related to research, design and development of products are charged to research and development expense as incurred. These costs include direct compensation, benefits, and other headcount related costs for research and development personnel; costs for materials used in research and development activities; costs for outside services and allocated portions of facilities and other corporate costs. The Company has entered into research and clinical study arrangements with selected hospitals, cancer treatment centers, academic institutions and research institutions worldwide. These agreements support the Company's internal research and development capabilities.

### **Share-Based Compensation**

The Company issues stock-based compensation awards to employees and directors in the form of stock options, restricted stock units (RSUs), performance units (PSUs), market stock units (MSUs) and employee stock purchase plan (ESPP) awards (collectively, awards).

The Company measures and recognizes compensation expense for all stock-based awards based on the awards' fair value. Share-based compensation for RSUs and PSUs is measured based on the value of the Company's common stock on the grant date. The Company uses the Monte-Carlo simulation model to estimate the fair value of MSUs. Share-based compensation for employee stock options and ESPP awards are measured on the date of grant using a Black-Scholes option pricing model.

Awards vest either on a graded schedule or in a lump sum. The Company determines the fair value of each award as a single award and recognizes the expense on a straight-line basis over the service period of the award, which is generally the vesting period. The exercise price of stock options granted is equal to the fair market value of the Company's common stock on the date of grant. Stock options expire ten years from the date of grant.

Share-based compensation expense for stock options, RSUs, PSUs and the ESPP awards is based on awards ultimately expected to vest, and the expense is recorded net of estimated forfeitures. The Company recognizes expense for MSUs net of estimated forfeitures and does not adjust the expense for subsequent changes in the expected outcome of the market-based vesting conditions.

### **Loss Contingencies**

The Company is involved in various lawsuits, claims and proceedings that arise in the ordinary course of business. The Company records a provision for a liability when it believes that it is both probable that a liability has been incurred and the amount can be reasonably estimated. Significant judgment is required to determine both probability and the estimated amount. The Company reviews these provisions quarterly and adjusts these provisions to reflect the impact of negotiations, settlements, rulings, advice of legal counsel, and updated information.

## Net Income (Loss) Per Common Share

Basic and diluted net income (loss) per share is computed by dividing net income (loss) attributable to stockholders by the weighted average number of common shares outstanding during the year. Potentially dilutive outstanding shares of common stock equivalents were excluded from the computation of diluted net loss per share for loss periods presented because including them would have been antidilutive.

A reconciliation of the numerator and denominator used in the calculation of basic and diluted net income (loss) per share attributable to stockholders follows (in thousands):

	Years Ended June 30,		
	2020	2019	2018
<b>Numerator:</b>			
Net income (loss) used to compute basic and diluted loss per share	\$ 3,827	\$ (16,430)	\$ (23,899)
<b>Denominator:</b>			
Weighted average shares used to compute basic income (loss) per share	89,874	87,465	84,893
Weighted average shares used to compute diluted income (loss) per share	90,623	87,465	84,893

The potentially dilutive shares of the Company's common stock resulting from the assumed exercise of outstanding stock options, the vesting of Restricted Stock Units (RSU), Market Stock Units (MSU) and Performance Stock Units (PSU), and the purchase of shares under the Employee Stock Purchase Program (ESPP), as determined under the treasury stock method, are excluded from the computation of diluted net income (loss) per share when their effect would have been anti-dilutive. Additionally, the 3.75% Convertible Notes due August 2022 (the "3.75% Convertible Notes"), the 3.50% Convertible Senior Notes due February 1, 2018 (the "3.50% Convertible Notes"), the 3.50% Series A Convertible Notes (the "3.50% Series A Convertible Notes") due February 1, 2018 are included in the calculation of diluted net income per share only if their inclusion is dilutive for periods during which the notes were outstanding.

The following table sets forth all potentially dilutive securities excluded from the computation in the table above when their effect would have been anti-dilutive (in thousands):

	As of June 30,		
	2020	2019	2018
Stock options	5,956	5,220	2,684
RSUs, PSUs and MSUs	3,761	3,725	5,159
	9,717	8,945	7,843

### ***Outstanding Convertible Notes—Diluted Share Impact***

The 3.75% Convertible Notes and the 3.50% Series A Convertible Notes have an optional physical (share), cash or combination settlement feature and contain certain conditional conversion features. The 3.50% Series A Convertible Notes were retired in February 2018. Due to the optional cash settlement feature and management's intent to settle the principal amount thereof in cash, the shares of common stock issuable upon conversion of the outstanding principal amount of the 3.75% Convertible Notes outstanding as of June 30, 2020, totaling approximately 14.9 million shares of our common stock, were not included in the basic and diluted net loss per common share table above.

## **Leases**

On July 1, 2019, the Company adopted Accounting Standards Codification Topic 842, “Leases” (“ASC 842”) to replace the existing lease accounting guidance. This pronouncement is intended to provide enhanced transparency and comparability by requiring lessees to record right-of-use assets and corresponding lease liabilities on the balance sheet for most leases. Expenses associated with leases will continue to be recognized consistent with previous accounting guidance. The Company adopted ASC 842 utilizing the current-period adjustment method added by the Financial Accounting Standards Board (“FASB”), which eliminates the requirement that entities apply the new lease standard to the comparative periods presented in the year of adoption.

The Company is the lessee in a lease contract when the Company obtains the right to use the asset. Operating leases are included in the line items right-of-use asset, lease obligation, current, and lease obligation, long-term in the consolidated balance sheet. Right-of-use asset represents the Company’s right to use an underlying asset for the lease term and lease obligations represent the Company’s obligations to make lease payments arising from the lease, both of which are recognized based on the present value of the future minimum lease payments over the lease term at the commencement date. Leases with a lease term of 12 months or less at inception are not recorded on the consolidated balance sheet and are expensed on a straight-line basis over the lease term in the consolidated statement of operations. The Company determines the lease term by agreement with lessor. As the leases do not provide an implicit interest rate, the Company uses the Company’s incremental borrowing rate based on the information available at commencement date in determining the present value of future payments.

## **Equity Method Investment**

During the twelve months ended June 30, 2020, the Company adopted a new accounting policy related to equity method investments in connection with its equity investment in CNNC Accuray (Tianjin) Medical Technology Co. Ltd., the Company’s joint venture in China (the “JV”). The equity method investment that the Company holds is equity securities in investees for which the Company has the ability to exercise significant influence over, but lacks a controlling financial interest in the investee. Equity method investment is measured at cost and adjusted for impairment, if any, for the Company’s share of the investee’s income or loss and intra-entity profits. The Company recognizes its proportionate share of income or loss from the JV on a one-quarter lag due to the timing of the availability of the JV’s financial records. Profit earned by the Company from the JV is eliminated through cost of goods sold until it is realized and such profits would generally be considered realized when the inventory has been sold through to third parties.

Equity method goodwill is not amortized, but is evaluated for impairment on an annual basis and when impairment indicators are present. Our impairment analysis considers qualitative and quantitative factors that may have a significant impact on the investee’s fair value. Qualitative factors include the investee’s financial condition and business outlook, industry and sector performance, operational and financing cash flow activities, and other relevant factors affecting the investee. When indicators of impairment exist, we prepare quantitative assessments of the fair value of our non-marketable equity investments, which require judgment and the use of estimates, including discount rates, investee revenue and costs, and comparable market data, among others.

## **Income Taxes**

The Company is required to estimate its income taxes in each of the tax jurisdictions in which it operates prior to the completion and filing of tax returns for such periods. This process involves estimating actual current tax expense together with assessing temporary differences in the treatment of items for tax purposes versus financial accounting purposes that may create net deferred tax assets and liabilities. The Company accounts for income taxes under the asset and liability method, which requires, among other things, that deferred income taxes be provided for temporary differences between the tax bases of the Company’s assets and liabilities and their financial statement reported amounts. In addition, deferred tax assets are recorded for the future benefit of utilizing net operating losses, research and development credit carryforwards and other deferred tax assets.

The Company records a valuation allowance to reduce its deferred tax assets to the amount the Company believes is more likely than not to be realized. Because of the uncertainty of the realization of the deferred tax assets, the Company has recorded a full valuation allowance against its domestic and certain foreign net deferred tax assets.

The calculation of unrecognized tax benefits involves dealing with uncertainties in the application of complex global tax regulations. Management regularly assesses the Company's tax positions in light of legislative, bilateral tax treaty, regulatory and judicial developments in the countries in which the Company does business. The Company anticipates that except for \$0.01 million in uncertain tax positions that may be reduced related to the lapse of various statutes of limitation, there will be no material changes in uncertain tax positions in the next 12 months.

### **Accumulated Other Comprehensive Loss**

The components of comprehensive income (loss) consist of net income (loss), changes in foreign currency exchange rate translation and net changes related to a defined benefit pension plan. The changes in foreign currency exchange rate translation and net changes related to the defined benefit pension plan are excluded from earnings and reported as a component of stockholders' equity. The foreign currency translation adjustment results from those subsidiaries not using the United States dollar as their functional currency since the majority of their economic activities are primarily denominated in their applicable local currency. Accordingly, all assets and liabilities related to these operations are translated at the current exchange rates at the end of each period. The resulting cumulative translation adjustments are recorded directly to the accumulated other comprehensive loss account in stockholders' equity. Revenues and expenses are translated at average exchange rates in effect during the period.

### **Note 2. Recent Accounting Pronouncements**

#### **Accounting Pronouncement Recently Adopted**

In August 2017, the FASB issued ASU No. 2017-12, Derivatives and Hedging, which simplifies the application and administration of hedge accounting. The guidance amends the presentation and disclosure requirements and changes how companies assess effectiveness. The guidance is intended to more closely align hedge accounting with companies' risk management strategies, simplify the application of hedge accounting, and increase transparency as to the scope and results of hedging programs. The guidance was effective for the Company in the first quarter of fiscal 2020 and was adopted on a prospective basis. The adoption of the guidance did not have a material impact on the Company's consolidated financial statements and related disclosures.

In February 2016, the FASB issued ASU 2016-02, "Leases (Topic 842)", which requires lessees to recognize on the balance sheet operating and financing lease liabilities and corresponding right-of-use assets. The Company adopted Topic 842 using the current period adjustment method as of July 1, 2019 and elected the transition option that allows the Company not to restate the comparative periods in its financial statements in the year of adoption. As a result, the Company had not changed previously disclosed amounts or provided additional disclosures for comparative periods. As of July 1, 2019, the right-of-use assets was \$30.6 million and the respective lease liability was \$34.5 million. The difference between the total right-of-use assets and total lease liabilities recorded as of July 1, 2019 is primarily due to the derecognition of deferred rent liabilities that were included in "Accrued expenses and other current liabilities" and "Other long-term liabilities," respectively, in the consolidated balance sheet as of June 30, 2019. The Company also elected the package of transition expedients available for expired or existing contracts, which allowed the Company to carryforward its historical assessment of (1) whether contracts are or contain leases, (2) lease classification and (3) initial direct costs. The Company elected to account for lease and non-lease components in its facility and car leases as a single lease component. As a policy election, for leases that, at commencement date, have a lease term of 12 months or less, the Company records expenses as incurred and does not recognize right-of-use assets and lease liabilities.

In February 2018, the FASB issued ASU No. 2018-02, Reclassification of Certain Tax Effects from Accumulated Other Comprehensive Income, that allows companies to reclassify from Accumulated Other Comprehensive Income to Retained Earnings stranded tax effects resulting from the enactment of the Tax Cuts and Jobs Act (the "Tax Act"). The Company adopted ASU No. 2018-02 in the first quarter of fiscal year 2020. The adoption of this ASU did not have any impact on the Company's consolidated financial statements and related disclosures.

## **Accounting Pronouncements Not Yet Effective**

In June 2016, the FASB issued a new accounting standard to replace the incurred loss impairment methodology under current GAAP with a methodology that reflects expected credit losses and requires consideration of a broader range of reasonable and supportable information to inform credit loss estimates. The Company will be required to use a forward-looking expected credit loss model for accounts receivable and other financial instruments. The Company will adopt the standard using the modified retrospective transition method on July 1, 2020 beginning of the first quarter of fiscal year 2021. The Company does not currently believe it will have a material impact upon adoption.

In November 2018, the FASB issued ASU 2018-18, Collaborative Arrangements (Topic 808) to clarify revenue accounting for collaborative arrangements entered into with customers. The standard is effective for the Company beginning in the first quarter of fiscal year 2021. Early adoption is permitted. The Company is evaluating the impact of adopting this standard to its consolidated financial statements and related disclosures.

In December 2019, the FASB issued ASU No. 2019-12, Income Taxes (Topic 740): Simplifying the Accounting for Income Taxes (“ASU 2019-12”). The amendments in ASU 2019-12 are intended to simplify various aspects related to accounting for income taxes. ASU 2019-12 removes certain exceptions to the general principles in Topic 740 and also clarifies and amends existing guidance to improve consistent application. ASU 2019-12 is effective for the Company beginning July 1, 2021 with early adoption permitted. The Company is evaluating the impact of adopting this standard to its consolidated financial statements and related disclosures.

In January 2020, the FASB issued ASU 2020-01 Investments-Equity Securities (Topic 321), Investments-Equity Method and Joint Ventures (Topic 323), and Derivatives and Hedging (Topic 815) - Clarifying the Interactions between Topic 321, Topic 323, and Topic 815. This standard addresses accounting for the transition into and out of the equity method and provides clarification of the interaction of rules for equity securities, the equity method of accounting, and forward contracts and purchase options on certain types of securities. This standard is effective for fiscal years and interim periods within those fiscal years beginning after December 15, 2020. Early adoption is permitted. The Company is currently evaluating the impact of ASU 2020-01, which is effective for the Company in its fiscal year and interim periods beginning on July 1, 2021, to its consolidated financial statements and related disclosures.

## **Note 3. Revenue**

### **Contract Balances**

The timing of revenue recognition, billings, and cash collections results in trade, unbilled receivables, and deferred revenues on the consolidated balance sheets. The Company may offer longer or extended payments of more than one year for qualified customers in some circumstances. At times, revenue recognition occurs before the billing, resulting in an unbilled receivable, which represents a contract asset. The contract asset is a component of accounts receivable and other assets for the current and non-current portions, respectively.

When the Company receives advances or deposits from customers before revenue is recognized, this results in a contract liability. It can take up to two and half years from the time of order to revenue recognition due to the Company’s long sales cycle.

Changes in the contract assets and contract liabilities are as follows:

(Dollars in thousands)	June 30, 2020 Amount	June 30, 2019 Amount
<b>Assets:</b>		
Unbilled accounts receivable – current (1)	\$ 11,739	\$ 5,260
Interest receivable – current (2)	493	361
Long-term accounts receivable (3)	3,810	4,116
Interest receivable – non-current (3)	1,342	1,255
<b>Liabilities:</b>		
Customer advances	22,571	20,395
Deferred revenue – current	83,207	78,332
Deferred revenue – non-current	24,125	26,639

- (1) Included in accounts receivable on consolidated balance sheets
- (2) Included in prepaid expenses and other current assets on consolidated balance sheets
- (3) Included in other assets on consolidated balance sheets

During the years ended June 30, 2020 and June 30, 2019, the Company recognized revenues of \$87.7 million and \$78.6 million, respectively, which were included in the deferred revenue balances at June 30, 2019 and June 30, 2018, respectively.

### Remaining Performance Obligations

Remaining performance obligations represent deferred revenue from open contracts for which performance has already started and the transaction price from executed non-cancelable contracts for which performance has not yet started. Service contracts in general are considered month-to-month contracts, and the Company has elected the practical expedient to not disclose the unsatisfied performance obligations for contracts with an original expected duration of one year or less.

As of June 30, 2020, total remaining performance obligations amounted to \$976.3 million. Of this total amount, \$78.5 million related to long-term warranty and service, which is expected to be recognized over the remaining warranty period for systems that have been delivered. For systems that have been delivered but not yet installed, management estimates the timing of installation since warranty starts upon installation.

The following table represents the Company's remaining performance obligations related to long-term warranty and service as of June 30, 2020 and the estimated revenue expected to be recognized (the time bands reflect management's best estimate of when the Company will transfer control to the customer and may change based on timing of shipment, readiness of customers' facilities for installation, installation requirements, and availability of products):

(Dollars in thousands)	Fiscal years of revenue recognition			
	2021	2022	2023	Thereafter
Long-term warranty and service	\$ 35,223	\$ 23,957	\$ 9,833	\$ 9,470

For the remaining \$897.8 million of performance obligations, the Company estimates 21% to 28% will be recognized in the next 12 months, and the remaining portion will be recognized thereafter. The Company's historical experience indicates that some of its customers will cancel or renegotiate contracts as economic conditions change or when product offerings change during the long sales cycle. Based on historical experience approximately 21% of the Company's open contracts may never result in revenue due to cancellation.

## Capitalized Contract Costs

The Company capitalizes and amortizes the incremental costs of obtaining a contract, primarily related to certain bonuses and sales commissions. The capitalized bonuses and sales commissions are amortized over a period of five years commencing upon the initial transfer of control of the system to the customer. The pattern of amortization is commensurate with the pattern of transfer of control of the performance obligations to the customer.

As of June 30, 2020 and 2019, the balance of capitalized costs to obtain a contract was \$7.9 million and \$8.4 million, respectively. The Company has classified the capitalized costs to obtain a contract as a component of prepaid expenses and other current assets and other assets with respect to the current and non-current portions of capitalized costs, respectively, on the consolidated balance sheets. The Company incurred a \$1.2 million and \$0.5 million impairment loss for the years ended June 30, 2020 and 2019, respectively. During the years ended June 30, 2020 and 2019 the Company recognized \$1.9 million and \$2.2 million, respectively, in expense related to the amortization of the capitalized contract costs.

## Note 4. Supplemental Financial Information

### Consolidated Balance Sheet

#### Accounts receivable, net

Accounts receivable, net consisted of the following (in thousands):

	June 30, 2020	June 30, 2019
Accounts receivable	\$ 80,128	\$ 107,230
Unbilled fees and services	11,739	5,260
	91,867	112,490
Less: Allowance for doubtful accounts	(1,268)	(605)
Accounts receivable, net	<u>\$ 90,599</u>	<u>\$ 111,885</u>

The Company received payment or had credits of \$0.4 million, added \$1.2 million and wrote off \$0.1 million from the allowance for doubtful accounts in fiscal 2020. The Company received payment or had credits of \$0.2 million and added \$0.6 million to the allowance for doubtful accounts in fiscal 2019.

#### Financing receivables

A financing receivable is a contractual right to receive money, on demand or on fixed or determinable dates, that is recognized as an asset in the Company's balance sheet. The Company's financing receivables, consisting of its accounts receivable with contractual maturities of more than one year, totaled \$3.8 million and \$4.3 million at June 30, 2020 and 2019, respectively, and are included in Other Assets in the consolidated balance sheets. The balance in financing receivables related to contractual maturities of more than one year. The Company evaluates the credit quality of an obligor at contract inception and monitors credit quality over the term of the underlying transactions. The Company performs a credit analysis for all new customers and reviews payment history, current order backlog, financial performance of the customers and other variables that augment or mitigate the inherent credit risk of a particular transaction. Such variables include the underlying value and liquidity of the collateral, the essential use of the equipment, the contract term and the inclusion of credit enhancements, such as guarantees, letters of credit or security deposits. The Company classifies accounts as high risk when it considers the financing receivable to be impaired or when management believes there is a significant near-term risk of non-payment. The Company performed an assessment of the allowance for credit losses related to its financing receivables. Based upon such assessment, the Company recorded adjustments of \$0.8 million and \$3.6 million to the allowance for credit losses related to such financing receivables during the years ended June 30, 2020 and 2019, respectively.

A summary of the Company's financing receivables is presented as follows (in thousands):

	June 30, 2020	June 30, 2019
Gross	\$ 13,019	\$ 13,288
Unearned income	(1,774)	(1,535)
Allowance for credit loss	(4,369)	(3,582)
Total, net	<u>\$ 6,876</u>	<u>\$ 8,171</u>
Reported as:		
Current	\$ 3,084	\$ 3,902
Non-current	3,792	4,269
Total, net	<u>\$ 6,876</u>	<u>\$ 8,171</u>

Actual cash collections may differ from the contracted maturities due to early customer buyouts, refinancing, or defaults.

### Inventories, net

Inventories consisted of the following (in thousands):

	June 30, 2020	June 30, 2019
Raw materials	\$ 48,037	\$ 40,966
Work-in-process	17,798	18,152
Finished goods	68,539	61,705
Inventories, net	<u>\$ 134,374</u>	<u>\$ 120,823</u>

### Property and Equipment, net

Property and equipment consisted of the following (in thousands):

	June 30, 2020	June 30, 2019
Furniture and fixtures	\$ 1,961	\$ 2,728
Computer and office equipment	10,896	11,183
Software	11,606	11,236
Leasehold improvements	26,206	25,741
Machinery and equipment	48,830	45,472
Construction in progress	623	1,658
	100,122	98,018
Less: Accumulated depreciation	(84,773)	(80,896)
Property and equipment, net	<u>\$ 15,349</u>	<u>\$ 17,122</u>

Depreciation and amortization expense related to property and equipment for the years ended June 30, 2020, 2019 and 2018 was \$7.3 million, \$8.1 million and \$9.6 million, respectively.

## Accumulated Other Comprehensive Income (Loss)

The following table summarizes the changes in accumulated other comprehensive income (loss) by component (in thousands):

	Foreign Currency Items	Change in Defined Pension Benefit Obligation	Total
<b>Balance at June 30, 2018</b>	\$ 1,237	\$ (144)	\$ 1,093
Other comprehensive loss	(247)	(856)	(1,103)
<b>Balance at June 30, 2019</b>	\$ 990	\$ (1,000)	\$ (10)
Other comprehensive loss	(238)	(236)	(474)
<b>Balance at June 30, 2020</b>	<u>\$ 752</u>	<u>\$ (1,236)</u>	<u>\$ (484)</u>

## Consolidated Statements of Operations

Other expense, net consisted of the following (in thousands):

(in thousands)	Years Ended June 30,		
	2020	2019	2018
Interest expense	\$ (18,080)	\$ (15,084)	(14,959)
Foreign currency transaction loss	(2,343)	(665)	(986)
Gain on contribution to joint venture	12,964	—	—
Other (expense) income	759	822	(3,279)
Total other expense, net	<u>\$ (6,700)</u>	<u>\$ (14,927)</u>	<u>\$ (19,224)</u>

## Note 5. Leases

The Company adopted ASC 842 – Leases using the current period adjustment method beginning on July 1, 2019. Under this approach, the Company did not restate its comparative amounts and recognized a right-of-use asset equal to the present value of the future lease payments. The Company elected to apply the practical expedient that allows for not reassessing: (1) whether any expired or existing contracts are or contain leases, (2) the lease classification for any expired or existing leases and (3) initial direct costs for any expired or existing leases. The practical expedient applied to transition contracts that were previously identified as leases and elected to not recognize right-of-use assets and lease obligations for leases of low value assets.

The Company has operating leases for corporate offices and warehouse facilities worldwide. Additionally, the Company leases cars, copy machines and laptops through various operating leases. For some leases the Company has entered into non-cancelable operating lease agreements with various expiration dates through June 2025. Certain lease agreements include options to renew or terminate the lease, which are not reasonably certain to be exercised and therefore are not factored into the determination of lease payments.

Operating lease costs for the twelve months ended June 30, 2020 were \$9.5 million, not including short-term operating lease costs, which were not material.

For the twelve months ended June 30, 2020, cash paid for amounts included in the measurement of operating lease liabilities was approximately \$9.5 million. Operating lease liabilities arising from obtaining operating right-of-use assets totaled \$5.2 million for the year ended June 30, 2020.

Operating lease right-of-use assets and operating lease obligation as of June 30, 2020 represented in the table below (in thousands):

	<b>Operating Lease</b>	<b>Finance Lease (a)</b>	<b>Total</b>
Operating lease right-of-use asset - initial recognition	\$ 30,578	\$ —	\$ 30,578
Lease asset added after initial recognition	5,244	10	5,254
Amortization for the year	<u>(7,175)</u>	<u>(2)</u>	<u>(7,177)</u>
Balance at June 30, 2020	<u>\$ 28,647</u>	<u>\$ 8</u>	<u>\$ 28,655</u>
Operating lease obligation - initial recognition	\$ 34,465	\$ —	\$ 34,465
Lease liability added after initial recognition	5,244	10	5,254
Repayment and interest accretion	<u>(7,312)</u>	<u>(2)</u>	<u>(7,314)</u>
Balance at June 30, 2020	<u>\$ 32,397</u>	<u>\$ 8</u>	<u>\$ 32,405</u>
Current portion of operating lease obligation	\$ 8,224	\$ 5	\$ 8,229
Noncurrent portion of operating lease obligation	\$ 24,173	\$ 3	\$ 24,176

(a) Finance lease assets included in property and equipment

Maturities of operating lease liabilities as of June 30, 2020 are presented in the table below (in thousands):

<b>Year Ending June 30,</b>	<b>Amount</b>
2021	\$ 9,449
2022	9,130
2023	8,510
2024	5,812
2025	<u>3,005</u>
Total operating lease payments	35,906
Less: imputed interest	(3,501)
Present value of operating lease liabilities	<u>\$ 32,405</u>
Weighted average remaining lease term (in years)	3.94
Weighted average discount rate	5.30%

## Note 6. Goodwill and Purchased Intangible Assets

### Goodwill

Goodwill as of June 30, 2020 and 2019 and changes in the carrying amount of goodwill for the respective periods are as follows (in thousands):

	<b>As of June 30,</b>	
	<b>2020</b>	<b>2019</b>
Balance at the beginning of the period	\$ 57,770	\$ 57,855
Currency translation	(53)	(85)
Balance at the end of the period	<u>\$ 57,717</u>	<u>\$ 57,770</u>

In fiscal 2020, the Company performed its annual goodwill impairment test and determined that there was no impairment to goodwill. In addition, during the third and fourth quarters of fiscal year 2020, the Company reviewed for possible triggering events due to circumstances surrounding the COVID-19 pandemic and no impairment loss was recorded as a result of such review. The Company will continue to monitor its recorded goodwill for indicators of impairment.

#### *Purchased Intangible Assets*

The Company's intangible assets associated with purchased patent license are as follows (in thousands):

	Useful Lives (in years)	As of June 30, 2020			As of June 30, 2019		
		Gross Carrying Amount	Accumulated Amortization	Net Amount	Gross Carrying Amount	Accumulated Amortization	Net Amount
Patent license	2 - 7	\$ 1,170	\$ (507)	\$ 663	\$ 1,000	\$ (321)	\$ 679

During fiscal 2017, the Company purchased a patent license with a useful life of seven years. During the quarter ending March 31, 2020 the Company purchased a patent license for \$170 thousand with a useful life of two years. The Company did not identify any triggering events that would indicate potential impairment of its definite-lived intangible and long-lived assets as of June 30, 2020 and 2019.

Amortization expense related to purchased intangible assets was \$0.2 million, \$0.1 million and \$0.1 million for the years ended June 30, 2020, 2019 and 2018, respectively.

The estimated future amortization expense of purchased intangible assets as of June 30, 2020 is as follows (in thousands):

Year Ending June 30,	Amount
2021	\$ 228
2022	185
2023	143
2024	107
	<u>\$ 663</u>

#### **Note 7. Derivative Financial Instruments**

The Company utilizes foreign currency forward contracts with reputable financial institutions to manage its exposure of fluctuations in foreign currency exchange rates on certain intercompany balances and foreign currency denominated cash, customer receivables and liabilities. The Company does not use derivative financial instruments for speculative or trading purposes. These forward contracts are not designated as hedging instruments for accounting purposes. Principal hedged currencies include the Euro, Japanese Yen, Swiss Franc, and U.S. Dollar. The periods of these forward contracts range up to approximately three months and the notional amounts are intended to be consistent with changes in the underlying exposures. The Company intends to exchange foreign currencies for U.S. Dollars at maturity. There were no outstanding foreign currency forward contracts at the end of fiscal years 2020 and 2019.

The following table shows the effect of forward contracts not designated as hedging instruments and foreign currency transactions gains and losses, which were included in "Other expense, net" on the consolidated statements of operations in fiscal years (in thousands):

	Years ended June 30,		
	2020	2019	2018
Foreign currency exchange gain (loss) on foreign contracts	\$ 744	\$ 17	\$ (2,461)
Foreign currency transactions gain (loss)	(3,087)	(682)	1,475

## Note 8. Fair Value Measurements

Fair value is an exit price representing the amount that would be received to sell an asset or paid to transfer a liability in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the measurement date. The fair value hierarchy contains three levels of inputs that may be used to measure fair value, as follows:

*Level 1*— Unadjusted quoted prices that are available in active markets for the identical assets or liabilities at the measurement date.

*Level 2*— Other observable inputs available at the measurement date, other than quoted prices included in Level 1, either directly or indirectly, including:

- Quoted prices for similar assets or liabilities in active markets;
- Quoted prices for identical or similar assets in non-active markets;
- Inputs other than quoted prices that are observable for the asset or liability; and
- Inputs that are derived principally from or corroborated by other observable market data.

*Level 3*— Unobservable inputs that cannot be corroborated by observable market data and require the use of significant management judgment. These values are generally determined using pricing models for which the assumptions utilize management’s estimates of market participant assumptions.

The Company had cash of \$107.6 million and \$76.8 million at June 30, 2020 and June 30, 2019, respectively.

### *Assets and Liabilities That Are Measured at Fair Value on a Nonrecurring Basis*

The Company’s debt is measured on a non-recurring basis using Level 2 inputs based upon observable inputs of the Company’s underlying stock price and the time value of the conversion option, since an observable quoted price of the 3.75% Convertible Notes (collectively the “Notes”) is not readily available. The Revolving Credit Facility and the Term Loan (collectively, the “Credit Facilities”) are valued at market interest rates, which it considers to be a level 2 fair value measurement. The Company believes that the carrying value of these financial instruments approximate its estimated fair value based on the effective interest rate compared to the current market rate available to the Company.

The following table summarizes the carrying value and estimated fair value of Credit Facilities and Notes (in thousands):

	June 30, 2020		June 30, 2019	
	Carrying Value	Fair Value	Carrying Value	Fair Value
3.75% Convertible Notes	\$ 76,398	\$ 65,272	\$ 72,730	\$ 84,227
Term Loan Facility	84,908	84,908	58,849	58,849
Revolving Credit Facility	28,001	28,001	28,265	28,265
<b>Total</b>	<u>\$ 189,307</u>	<u>\$ 178,181</u>	<u>\$ 159,844</u>	<u>\$ 171,341</u>

## Note 9. Commitments and Contingencies

### Long-term Debt Commitments

The Company is required to make semi-annual interest payments on the 3.75% Convertible Notes, and monthly interest payments on the Revolving Credit Facility and Term Loan. See Note 10, *Debt*, for details.

Future minimum long-term principal and interest on the 3.75% Convertible Notes and Credit Facilities as of June 30, 2020 are as follows (in thousands):

Year Ending June 30,	Long-Term Debt (1)
2021	\$ 14,928
2022	39,669
2023	119,083
2024	60,530
Total	<u>\$ 234,210</u>

- (1) These amounts represent principal and interest cash payments over the contractual life of the debt obligations, including anticipated interest payments that are not recorded on the Company's consolidated balance sheet. Any conversion, premium, redemption or purchase of the 3.75% Convertible Notes would impact cash payments noted in the preceding table.

### Purchase Commitments

The Company's purchase commitments and obligations include all open purchase orders and contractual obligations in the ordinary course of business, including commitments with contract manufacturers and suppliers, for which the Company has not received the goods or services and acquisition and licensing of intellectual property. A majority of these purchase obligations are due within a year. Although open purchase orders are considered enforceable and legally binding, the terms generally allows the Company the option to cancel, reschedule, and adjust its requirements based on the Company's business needs prior to the delivery of goods or performance of services, and hence, have not been included in the table above.

### Indemnities and Commitments

The Company enters into standard indemnification agreements with its landlords and all superior mortgagees and their respective directors, officers' agents, and employees in the ordinary course of business. Pursuant to these agreements, the Company will indemnify, hold harmless, and agree to reimburse the indemnified party for losses suffered or incurred by the indemnified party, generally the landlords, in connection with any loss, accident, injury, or damage by any third-party with respect to the leased facilities. The term of these indemnification agreements is from the commencement of the lease agreements until termination of the lease agreements. The maximum potential amount of future payments the Company could be required to make under these indemnification agreements is unlimited; however, historically the Company has not incurred claims or costs to defend lawsuits or settle claims related to these indemnification agreements. The Company has not recorded any liability associated with its indemnification agreements as it is not aware of any pending or threatened actions that represent probable losses as of June 30, 2020.

### Guarantees

As of June 30, 2020, the Company had three bank guarantees totaling approximately \$1.0 million related to a bidding process with three customers. As of June 30, 2019, the Company had bank guarantees totaling approximately \$0.7 million related to a bidding process with two customers.

### Royalty Agreement

The Company has an exclusive license agreement with the Wisconsin Alumni Research Foundation (WARF), to make, use, sell and otherwise distribute products under certain of WARF's patents anywhere in the world. The Company is required to pay WARF a royalty for each TomoTherapy System sold that includes the licensed technology. The license agreement expires upon expiration of the patents and may be terminated earlier if the Company so elects. The license agreement expired on August 6, 2019 as a result of the expiration of the patent. The Company recorded royalty costs of \$0.05 million, \$0.6 million and \$0.5 million for the years ended June 30, 2020, 2019 and 2018, respectively, which were recorded in cost of revenue or deferred cost of revenue. The Company had no accrued liabilities and approximately \$0.2 million at June 30, 2020 and 2019, respectively, related to this agreement.

## Software License Indemnity

Under the terms of the Company's software license agreements with its customers, the Company agrees that in the event the software sold infringes upon any patent, copyright, trademark, or any other proprietary right of a third-party, it will indemnify its customer licensees against any loss, expense, or liability from any damages that may be awarded against its customer. The Company includes this infringement indemnification in all of its software license agreements and selected managed services arrangements. In the event the customer cannot use the software or service due to infringement and the Company cannot obtain the right to use, replace or modify the license or service in a commercially feasible manner so that it no longer infringes, then the Company may terminate the license and provide the customer a refund of the fees paid by the customer for the infringing license or service. The Company has not recorded any liability associated with this indemnification, as it is not aware of any pending or threatened actions that represent probable losses as of June 30, 2020.

## Litigation

From time to time, the Company is involved in legal proceedings arising in the ordinary course of its business. The Company records a provision for a loss when it believes that it is both probable that a loss has been incurred and the amount can be reasonably estimated. Currently, management believes the Company does not have any probable and reasonably estimable losses related to any current legal proceedings and claims. Although occasional adverse decisions or settlements may occur, management does not believe that an adverse determination with respect to any of these claims would individually or in the aggregate materially and adversely affect the Company's financial condition or operating results. Litigation is inherently unpredictable and is subject to significant uncertainties, some of which are beyond the Company's control. Should any of these estimates and assumptions change or prove to have been incorrect, the Company could incur significant charges related to legal matters that could have a material impact on its results of operations, financial position and cash flows.

## Note 10. Debt

### *3.75% Convertible Senior Notes due July 2022*

In August 2017, the Company issued \$85.0 million aggregate principal amount of its 3.75% Convertible Senior Notes due 2022 (the "3.75% Convertible Notes") under an indenture between the Company and The Bank of New York Mellon Trust Company, N.A., as trustee. \$53.0 million aggregate principal amount of the 3.75% Convertible Notes were issued to certain holders of the Company's outstanding 3.50% Convertible Notes and 3.50% Series A Convertible Notes (together, the "Existing Notes") in exchange for approximately \$47.0 million aggregate principal amount of the Existing Notes (the "Exchange") and \$32.0 million aggregate principal amount of the 3.75% Convertible Notes were issued to certain other qualified new investors for cash. The net proceeds of the cash issuance were used to repurchase approximately \$28.0 million of Existing Notes (the "Repurchase").

Holders of the 3.75% Convertible Notes may convert their notes at any time on or after April 15, 2022 until the close of the business day immediately preceding the maturity date. Prior to April 15, 2022, holders of the 3.75% Convertible Notes may convert their notes only under certain circumstances.

Upon conversion, the Company will have the right to pay cash, or deliver shares of common stock of the Company or a combination thereof, at the Company's election. The initial conversion rate is 174.8252 shares of the Company's common stock per \$1,000 principal amount (which represents an initial conversion price of approximately \$5.72 per share of the Company's common stock). The conversion rate, and thus the conversion price, is subject to adjustment as further described below.

Holders of the 3.75% Convertible Notes who convert their notes in connection with a "make-whole fundamental change," as defined in the indenture, may be entitled to a make-whole premium in the form of an increase in the conversion rate. Additionally, in the event of a "fundamental change," as defined in the indenture, holders of the 3.75% Convertible Notes may require the Company to purchase all or a portion of their note at a fundamental change repurchase price equal to 100% of the principal amount of the 3.75% Convertible Notes, plus accrued and unpaid interest, if any, to, but not including, the fundamental change repurchase date. As of June 30, 2020, \$85.0 million aggregate principal amount was outstanding.

### *Revolving Credit Facility*

On June 14, 2017, the Company entered into a credit and security agreement with a lender (the “Credit Agreement”). The Credit Agreement provides the Company with a revolving credit facility in the initial amount of \$52.0 million (the “Revolving Credit Facility”). Availability for borrowings under the Revolving Credit Facility is subject to a borrowing base that is calculated as a function of the value of the Company’s eligible accounts receivable and eligible inventory, and the Company is required to maintain a minimum drawn balance of at least 30% of such availability. Interest on the borrowings under the Revolving Credit Facility is payable monthly in arrears at an annual interest rate of reserve-adjusted, 90-day LIBOR plus 4.50% and had initial maturity date of June 14, 2021.

In December 2017, concurrently with the Term Loan Agreement (as defined below), the Company entered into an amendment to the Credit Agreement (the “Amendment” and, collectively with the Credit Agreement, the “Amended Credit Agreement”). The Amendment reduced the maximum borrowings under the Revolving Credit Facility to \$32.0 million and extended the maturity date of the Revolving Credit Facility to December 15, 2022.

In May 2019, the Company amended the Amended Credit Agreement to, among other things, decrease the interest rate from 90-day LIBOR plus 4.50% to 90-day LIBOR plus 3.50% and extend the maturity date to May 30, 2024 and update the calculation of the deferred revolving loan origination fee such that it is based on the amount of time elapsed from the effective date of the May 2019 amendment. The Company accounted for the amendment as a modification of existing debt and deferred an insignificant amount of offering costs on the consolidated balance sheet as of June 30, 2019. The Amended Credit Agreement was further amended in August 2019 to, among other things, revise or add financial covenants, including the fixed charge coverage ratio, minimum net revenue, minimum consolidated cash balance and minimum consolidated domestic cash balance tests. Other significant terms remain unchanged. The Company accounted for the amendment as a modification of existing debt and deferred an insignificant amount of offering costs on the consolidated balance sheet.

As of June 30, 2020, approximately \$28.0 million of aggregate principal amount was outstanding under the Revolving Credit Facility, and \$0.9 million of unamortized debt costs associated with the Revolving Credit Facility was included in other assets on the condensed consolidated balance sheet.

### *Term Loan*

In December 2017, the Company entered into a credit and security agreement with a lender (the “Term Loan Agreement”). The Term Loan Agreement provides for an initial term loan of \$40.0 million with an additional tranche of \$20.0 million undrawn and available through December 31, 2018, if specified conditions are met (the “Term Loan”). In connection with the Amendment, the Company used a portion of the net proceeds from the initial advance to repay a portion of the outstanding borrowings under the Revolving Credit Facility. Interest on the Term Loan is payable monthly in arrears at an annual interest rate of 6.75% plus 90-day LIBOR. The Term Loan Agreement matures December 15, 2022 and, if prepaid, has fees equal to 3%, 2%, and 1% of the prepayment amount if such termination occurs within the first year, the second year, and the third year of funding, respectively. The term of the loan is 60 months with interest only for the first 24 months followed by straight-line amortization of principal for the remaining months. In addition, the Company will pay an annual administrative fee of 0.25% and a final payment of 4.0% of the Term Loan amount.

In December 2018, the Company drew an additional \$5.0 million under the Term Loan Agreement and in connection therewith entered into the second amendment to the Term Loan Agreement (“Amendment 2”) which, among other things, (i) extended the term loan tranche 2 commitment termination date for the remaining \$15.0 million unfunded commitment from December 31, 2018 to June 30, 2019; (ii) provided that term loan tranche 2 may be drawn in two separate advances; and (iii) updated the calculation of the prepayment fee such that it is based on the amount of time elapsed from the effective date of Amendment 2.

In May 2019, the Company amended the Term Loan Agreement to, among other things, increase the loan tranche 2 commitment by \$0.5 million, extend the maturity date to May 30, 2024, decrease the annual interest rate from 6.75% plus 90-day LIBOR to 5.50% plus 90-day LIBOR, and modify the calculation prepayment fee such that it is based on the amount of time elapsed from the effective date of the May 2019 amendment. The Company accounted

for the amendment as a modification of existing debt and recorded approximately \$1.5 million of debt discount costs associated with the amendment against long-term debt on the consolidated balance sheets as of June 30, 2019.

In August 2019, the Company amended the Term Loan Agreement to, among other things, increase the loan commitment by \$25 million in the form of a new tranche (“Tranche 3”), increase the annual interest rate from 5.50% plus 90-day LIBOR to 6.75% plus 90-day LIBOR, and revise or add financial covenants, including the fixed charge coverage ratio, minimum net revenue, minimum consolidated cash balance and minimum consolidated domestic cash balance tests. Other significant terms remain unchanged. The Company borrowed in full Tranche 3, or \$25 million, on the date of the amendment. The Company accounted for the amendment as a modification of existing debt, at the same time, the Company recorded approximately \$1.6 million of debt discount costs associated with the amendment against long-term debt.

As of June 30, 2020, approximately \$89.1 million aggregate principal amount was outstanding.

The following table presents the carrying value of all Credit Facilities and 3.75% Convertible Notes (in thousands):

	Revolving Credit Facility (1)	3.75% Convertible Notes	Term Loan Facility	Total
Carrying amount of equity conversion component	\$ —	\$ 14,650	\$ —	\$ 14,650
Principal amount	\$ 28,001	\$ 85,000	\$ 89,093	\$ 202,094
Unamortized debt costs	—	(1,922)	(874)	(2,796)
Unamortized debt discount	—	(6,680)	(3,311)	(9,991)
Net carrying amount	<u>\$ 28,001</u>	<u>\$ 76,398</u>	<u>\$ 84,908</u>	<u>\$ 189,307</u>

(1) Unamortized debt costs of \$0.9 million recorded in other assets on the consolidated balance sheet.

A summary of interest expense on the Credit Facilities and Notes is as follows (in thousands):

	Year ended June 30,		
	2020	2019	2018
Interest expense related to contractual interest coupon	\$ 12,373	\$ 10,185	\$ 9,953
Interest expense related to amortization of debt discount	4,168	3,370	3,377
Interest expense related to amortization of debt issuance costs	1,350	1,529	1,629
Total	<u>\$ 17,891</u>	<u>\$ 15,084</u>	<u>\$ 14,959</u>

### Note 11. Shareholders' Equity

At June 30, 2020, the Company had 9.7 million shares of common stock reserved for issuance under the stock incentive plans and the employee stock purchase plan.

### Note 12. Stock Incentive Plan and Employee Stock Purchase Plan

As of June 30, 2020, the Company had three outstanding stock incentive plans: the 2016 Equity Incentive Plan, or the 2016 Plan; the 2007 Incentive Award Plan, or the 2007 Plan; and the 1998 Stock Incentive Plan, or the 1998 Plan. The 2016 Plan permits the granting of stock options, stock appreciation rights, restricted stock awards, performance shares, performance units, and restricted stock units, or RSUs. The vesting of RSUs granted under the 2016 Plan are primarily service-based (over the requisite service period) while the vesting of performance units granted under the 2016 Plan are primarily performance-based, or PSUs, or market-based, or MSUs. Only employees of the Company are eligible to receive incentive stock options. Non-employees may be granted non-qualified stock options.

Stock options granted under the 2016 Plan have an exercise price of at least 100% of the fair market value of the underlying stock on the grant date. The stock options have 10 year contractual terms and generally become exercisable for 25% of the option shares one year from the date of grant and then ratably over the following 36 months. Service-based RSUs granted under the equity plans generally vest 25% of the share units covered by the grant on each of the first through fourth anniversaries of the date of the grant, subject to the continued service of the grantee through each such date. However, certain of the outstanding RSUs under our equity plans vest 50% upon the first anniversary year of the grant date, and 50% upon the second anniversary year of the grant date. The Board of Directors has the discretion to use different vesting schedules.

As of June 30, 2020, the 2007 Plan and the 1998 Plan each continued to remain in effect; however, the Company can no longer grant equity awards under such plans.

The following table summarizes the share-based compensation charges included in the Company's consolidated statements of operations and comprehensive income (loss) (in thousands):

	Years ended June 30,		
	2020	2019	2018
Cost of revenue	\$ 1,244	\$ 1,666	\$ 1,866
Research and development	1,457	1,773	2,312
Selling and marketing	1,159	2,081	1,390
General and administrative	4,292	5,081	6,721
Total	<u>\$ 8,152</u>	<u>\$ 10,601</u>	<u>\$ 12,289</u>

The amount of capitalized share-based compensation costs as components of inventory was insignificant at June 30, 2020, 2019 and 2018.

### ***Stock Options***

The fair value of each option is estimated at the date of grant using the Black-Scholes option pricing formula with the following assumptions:

	Years Ended June 30,		
	2020	2019	2018
Risk-free interest rate	1.14% - 1.53%	1.94% - 2.81%	1.98%
Dividend yield	—%	—%	—%
Expected term	5.63 - 5.64	5.31 - 5.51	5.25
Expected volatility	47.3% - 48.9%	47.0% - 47.1%	43.9%

### ***Determining Fair Value of Stock Options***

The fair value of each grant of stock options was determined by the Company using the methods and assumptions discussed below. Each of these inputs is subjective and generally requires significant judgment to determine.

*Valuation and Amortization Method*—The Company estimates the fair value of its stock options using the Black-Scholes option-pricing model. This fair value is then amortized over the requisite service periods of the awards.

*Expected Term*—The Company estimates the expected term of stock option by taking the average of the vesting term and the contractual term of the option, as illustrated by the simplified method.

*Expected Volatility*—The expected volatility is derived from the Company's historical stock volatility over a period approximately equal to the expected term of the options.

*Risk-Free Interest Rate*—The risk-free interest rate is based on the U.S. Treasury yield curve on the date of grant.

*Dividend Yield*—The dividend yield assumption is based on the Company’s history and expectation of no dividend payouts.

A summary of option activity under the Company’s incentive plan during the fiscal years is presented below (in thousands except per share and term amounts):

	Options Outstanding	Weighted Average Exercise Price	Weighted Average Remaining Contractual Life (In Years)	Aggregate Intrinsic Value
Balance at June 30, 2017	2,463	\$ 6.05	5.42	\$ 191
Options granted	795	4.12		
Options exercised	(109)	4.02		
Options forfeited/expired	(465)	7.76		
Balance at June 30, 2018	2,684	5.26	6.16	\$ 60
Options granted	3,359	4.09		
Options exercised	(115)	4.26		
Options forfeited/expired	(708)	5.51		
Balance at June 30, 2019	5,220	4.50	7.97	\$ 11
Options granted	2,305	2.64		
Options exercised	—	—		
Options forfeited/expired	(1,569)	4.36		
Balance at June 30, 2020	<u>5,956</u>	3.82	8.04	\$ —
Vested or Expected to vest at June 30, 2020	<u>5,222</u>	3.90	7.90	
Exercisable at June 30, 2020	<u>2,109</u>	\$ 4.73	6.47	

The aggregate intrinsic value in the table above represents the total pre-tax intrinsic value (the difference between the fair value of the Company’s common stock on June 30, 2020 of \$2.03 and the exercise price of the options that would have been received by option holders if all options exercisable had been exercised on June 30, 2020. The total intrinsic value of options exercised in the years ended June 30, 2020, 2019 and 2018 was approximately \$0 million, \$0.1 million and \$0.1 million, respectively.

During the years ended June 30, 2020, 2019 and 2018, the Company recognized \$2.0 million, \$1.4 million and \$0.6 million, respectively, of share-based compensation expense for stock options granted to employees.

Tax benefits from tax deductions for exercised options and disqualifying dispositions in excess of the deferred tax asset attributable to stock compensation costs for such options are credited to additional paid-in capital. Upon adoption of ASU 2016-09 on July 1, 2017, the benefits are recognized against income taxes. Realized excess tax benefits related to stock options exercises was zero for each of the years ended June 30, 2020, 2019 and 2018.

As of June 30, 2020, there was approximately \$6.7 million of unrecognized compensation cost net of estimated forfeitures, related to unvested stock options, which is expected to be recognized over a weighted average period of 2.89 years.

The following table summarizes information about outstanding and exercisable options at June 30, 2020 (in thousands, except years and exercise price):

Range of Exercise Prices	Options Outstanding			Options Exercisable	
	Number Outstanding	Weighted Average Remaining Contractual Life (Years)	Weighted Average Exercise Price	Number Outstanding	Weighted Average Exercise Price
\$2.60 – 2.60	1,815	9.34	\$ 2.60	—	\$ —
\$2.96 – 4.01	764	7.78	3.60	326	3.99
\$4.10 – 4.10	2,543	8.42	4.10	1,007	4.10
\$4.23 – 7.70	826	4.29	5.77	768	5.82
\$8.01 – 8.01	2	1.00	8.01	2	8.01
\$8.89 – 8.89	6	0.83	8.89	6	8.89
<b>Total Outstanding</b>	<b>5,956</b>	<b>8.04</b>	<b>\$ 3.82</b>	<b>2,109</b>	<b>\$ 4.73</b>

### **Restricted Stock**

The following table summarizes the activity of RSUs, PSUs and MSUs (in thousands, except fair value per share):

	Restricted Stock Units	Performance Stock Units	Market Stock Units	Total Number of Shares Underlying Stock Awards	Weighted Average Grant Date Fair Value Per Share
<b>Unvested Restricted Stock</b>					
Unvested at June 30, 2017	3,884	10	1,333	5,227	\$ 5.75
Granted	1,529	53	654	2,236	4.40
Vested	(1,167)	—	—	(1,167)	6.24
Cancelled/Forfeited	(546)	—	(590)	(1,136)	5.87
Unvested at June 30, 2018	3,700	63	1,397	5,160	5.03
Granted	1,386	—	—	1,386	3.68
Vested	(1,481)	(10)	—	(1,491)	5.44
Cancelled/Forfeited	(521)	(53)	(756)	(1,330)	5.10
Unvested at June 30, 2019	3,084	—	641	3,725	4.34
Granted	2,009	419	—	2,428	2.74
Vested	(1,579)	—	—	(1,579)	4.62
Cancelled/Forfeited	(343)	—	(470)	(813)	3.96
Unvested at June 30, 2020	<b>3,171</b>	<b>419</b>	<b>171</b>	<b>3,761</b>	<b>\$ 4.34</b>

As of June 30, 2020, there was approximately \$8.7 million of unrecognized compensation cost, net of estimated forfeitures, related to restricted stock, which is expected to be recognized over a weighted average period of 1.76 years.

### **Restricted Stock Units**

The Company recognized \$4.9 million, \$7.2 million and \$7.8 million of share-based compensation expense, net of estimated forfeitures, related to RSUs during the years ended June 30, 2020, 2019 and 2018. The weighted average grant date fair value per share of RSUs was \$2.74, \$3.68 and \$4.57 for the years ended June 30, 2020, 2019 and 2018, respectively. The aggregate fair market value of RSUs that vested during the year ended June 30, 2020 was \$4.7 million.

### Performance Stock Units

The Compensation Committee approved the grant of 419,000, zero and 53,000 PSUs to select employees of the Company in the years ended June 30, 2020, 2019 and 2018, respectively. Of these PSUs, 10,000 were vested in the year ended June 30, 2019 due to the achievement of the requisite performance targets. No PSUs vested in the years ended June 30, 2020 and June 30, 2018. There was no cancellations of PSUs during the year ended June 30, 2020 and for the years ended June 30, 2019 and 2018, 53,000 and no PSUs were cancelled, respectively.

The Company recognized no expense or benefit, a benefit of \$0.1 million, and an expense of \$0.1 million, of share-based compensation expense, net of estimated forfeitures, related to PSUs during the years ended June 30, 2020, 2019, and 2018, respectively.

### Market Stock Units

The Compensation Committee approved the performance equity program, referred to as the market stock unit program, or MSU program, in October 2012. The Company's MSU Program uses the Russell 2000 index as a performance benchmark and requires that the Company's total stockholder return match or exceed that of the Russell 2000. Based on a sliding scale of how much the Company's total stockholder return outperforms the Russell 2000 benchmark, the participating executives can earn up to a maximum of 150% of the target number of shares over two measurement periods. The Company uses a Monte-Carlo simulation to calculate the fair value of the award on the grant date. The Compensation Committee approved the grant of 0.6 million MSUs to select employees of the Company in the year ended June 30, 2018 and none were granted for the years ended June 30, 2020 and 2019. Of these MSUs, no shares vested in the years ending June 30, 2020, 2019 and 2018, respectively, due to the non-achievement of the requisite performance target against the Russell 2000 index while 0.5 million, 0.8 million and 0.6 million MSUs were cancelled in the years ended June 30, 2020, 2019 and 2018, respectively.

The Company recognized \$0.2 million, \$1.0 million and \$2.6 million of share-based compensation expense, net of estimated forfeitures, related to MSUs during the years ended June 30, 2020, 2019 and 2018, respectively. There were no MSUs granted during the years ended June 30, 2020 and 2019. The weighted average grant date fair value per share of MSUs was zero, and \$4.11 for the years ended June 30, 2019 and 2018, respectively. As of June 30, 2020, there was approximately \$0.1 million of unrecognized compensation cost, net of estimated forfeitures, related to MSUs.

### Employee Stock Purchase Plan

Under the Company's Amended and Restated 2007 Employee Stock Purchase Plan, or ESPP, qualified employees are permitted to purchase the Company's common stock at 85% of the lower of the fair market value of the common stock on the commencement date of each offering period or the fair market value on the specified purchase date. The ESPP is deemed compensatory and compensation costs are accounted for under ASC 718, *Stock Compensation*. Employees' payroll deductions may not exceed 10% of their salaries. Employees may purchase up to 2,500 shares per period provided that the value of the shares purchased in any calendar year may not exceed \$25,000, as calculated pursuant to the purchase plan.

The Company estimates the fair value of ESPP shares at the date of grant using the Black-Scholes option pricing model. The weighted average assumptions were as follows:

	Years Ended June 30,		
	2020	2019	2018
Risk-free interest rate	0.17% - 1.60%	2.11% - 2.72%	1.07% - 2.28%
Dividend yield	—%	—%	—%
Expected term	0.5 - 1.0	0.5 - 1.0	0.5 - 1.0
Expected volatility	45.46% - 75.21%	30.9% - 60.0%	31.3% - 51.1%

The risk-free rate for the expected term of the ESPP option was based on the U.S. Treasury Constant Maturity rate for each offering period; expected volatility was based on the historical volatility of the Company’s common stock; and the expected term was based upon the offering period of the ESPP. For the years ended June 30, 2020, 2019 and 2018, the Company recognized \$1.1 million, \$1.1 million and \$1.2 million, respectively, of compensation expense related to its ESPP.

The Company issued 1.1 million, 0.9 million and 0.9 million shares under the ESPP during fiscal 2020, 2019 and 2018, respectively, at a weighted average price per share of \$2.16, \$3.31 and \$3.62, respectively. As of June 30, 2020, total unrecognized compensation cost related to the ESPP plan was \$0.6 million, which the Company expects to recognize over a weighted average period of 0.5 years.

### Note 13. Joint Venture

In January 2019, the Company’s wholly-owned subsidiary, Accuray Asia Limited (“Accuray Asia”), entered into an agreement with CNNC High Energy Equipment (Tianjin) Co., Ltd. (the “CIRC Subsidiary”), a wholly-owned subsidiary of China Isotope & Radiation Corporation, to form a joint venture, CNNC Accuray (Tianjin) Medical Technology Co. Ltd. (the “JV”), to manufacture and sell radiation oncology systems in China.

In exchange for the 49% equity interest in the JV, the Company, through Accuray Asia, made in-kind capital contributions consisting of two full radiation oncology systems from the Company’s inventory in the quarter ended December 31, 2019. The investment is reported as an Investment in joint venture on the Company’s consolidated balance sheets. The Company recognized a gain of \$13.0 million related to the value of the capital contribution to the JV. This gain was recorded as non-operating, other income in the three months ended December 31, 2019.

The Company is applying the equity method of accounting to its ownership interest in the JV as the Company has the ability to exercise significant influence over the JV but lacks controlling financial interest and is not the primary beneficiary. The Company recognizes revenue on sales to the JV in the current period, eliminating a portion of profit to the extent goods sold have not been sold through by the JV to an end customer at the end of each reporting period. The Company eliminated \$1.8 million of such intra-entity profit from system sales executed during the year ended June 30, 2020 as the transfer of control to the final end user for these systems did not occur before the end of period. The Company recognizes the 49% proportionate share of the JV income or loss on a one-quarter lag due to the timing of the availability of the JV’s financial records. The Company’s consolidated accumulated deficit includes \$0.1 million of accumulated losses related to our equity method investment.

As of June 30, 2020, the Company had a carrying value of \$13.9 million in the JV and owned a 49% interest in the entity. The Company’s proportional share of the underlying equity in net assets of the JV was approximately \$10.9 million. The difference represents equity method goodwill. The carrying value of the Company’s investment in the JV was decreased by \$1.8 million of intra-entity profit which is not considered in goodwill assessment. The difference of \$3.0 million increased by \$1.8 million of eliminated profit constitutes equity method goodwill of \$4.8 million which is subject to impairment analysis. No impairment was identified as of June 30, 2020.

### Note 14. Income Taxes

Income (loss) before provision for income taxes on the accompanying statements of operations and comprehensive loss included the following components (in thousands):

	Years Ended June 30,		
	2020	2019	2018
Domestic	\$ (1,811)	\$ (23,799)	\$ (30,747)
Foreign	7,501	9,455	7,726
Total worldwide	\$ 5,690	\$ (14,344)	\$ (23,021)

The provision for income taxes consisted of the following (in thousands):

	Years Ended June 30,		
	2020	2019	2018
<b>Current:</b>			
Federal	\$ —	\$ —	\$ —
State	15	32	63
Foreign	1,495	2,140	785
Total current	<u>\$ 1,510</u>	<u>\$ 2,172</u>	<u>\$ 848</u>
<b>Deferred:</b>			
Federal	—	—	—
State	—	—	—
Foreign	353	(86)	30
Total deferred	353	(86)	30
Total provision for income taxes	<u>\$ 1,863</u>	<u>\$ 2,086</u>	<u>\$ 878</u>

Income tax payable was \$0.8 million, \$1.6 million and \$1.1 million at June 30, 2020, 2019 and 2018, respectively. A reconciliation of income taxes at the statutory federal income tax rate to the provision for income taxes included in the accompanying consolidated statements of operations and comprehensive loss is as follows (in thousands):

	Years Ended June 30,		
	2020	2019	2018
<b>U.S. federal taxes (benefit):</b>			
At federal statutory rate	\$ 1,195	\$ (3,012)	\$ (6,446)
State tax, net of federal benefit	15	32	63
Share-based compensation expense	810	1,128	1,712

Deferred income taxes reflect the net tax effects of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for income tax purposes. Significant components of the Company's net deferred tax assets were as follows (in thousands):

	June 30,	
	2020	2019
<b>Deferred tax assets:</b>		
Federal and state net operating losses	\$ 75,615	\$ 77,228
Accrued expenses and reserves	4,972	7,497
Lease liability	5,366	—
Deferred revenue	5,038	2,897

Total deferred tax assets	124,271	121,115
<b>Deferred tax liabilities:</b>		
Contract acquisition costs	(977)	(1,146)
Right of use assets	(4,508)	—
Total deferred tax liabilities	(5,485)	(1,146)
Valuation allowance	(118,300)	(119,125)
Net deferred tax assets	<u>\$ 486</u>	<u>\$ 844</u>

As of June 30, 2020, the Company had approximately \$322.1 million and \$139.1 million in federal and state net operating loss carryforwards, respectively. The federal and state carryforwards expire in varying amounts beginning in 2025 for federal and 2021 for state purposes.

In addition, as of June 30, 2020, the Company had federal and state research and development tax credits of approximately \$22.0 million and \$20.4 million, respectively. If not utilized, the federal research credits will begin to expire in 2021, the California research credits have no expiration date, and the other state research credits will begin to expire in 2021.

Under the Internal Revenue Code ("IRC") Sections 382 and 383, annual use of our net operating loss and research tax credit carryforwards to offset taxable income may be limited based on cumulative changes in ownership. Although ownership changes have occurred in the past, the carryovers should be available for utilization by the Company before they expire, provided the Company generates sufficient future taxable income. There were no equity financings in the current fiscal year that would result in an ownership change under Section 382. The Company will continue to monitor the changes in equity that would affect the tax attributes as reported.

Based on the available objective evidence and history of losses, the Company has established a 100% valuation allowance against the combined domestic net deferred tax assets of Accuray and TomoTherapy because of uncertainty surrounding the realization of such deferred tax assets.

In December 2017, the Tax Cuts and Jobs Act of 2017 (Tax Act) was signed into law which significantly amends the Internal Revenue Code of 1986, among other things reduces the corporate tax rate from a top marginal rate of 35% to a flat rate of 21%, imposes a one-time tax on offshore earnings at reduced rates regardless of whether they are repatriated. The Tax Act did not impact the Company's financial statements due to the Company's historical U.S. losses.

In March 2020, the Coronavirus Aid, Relief and Economic Security Act (the "CARES Act") was signed into law in the United States. The provisions of the CARES Act did not have a material impact on the Company's effective tax rate and consolidated financial statements given the Company's full valuation allowance against its net U.S. deferred tax assets.

Beginning fiscal year 2019, for U.S. federal tax purposes certain income earned by controlled foreign corporations ("CFCs") must be included currently in the gross income of the CFC's U.S. shareholder. The income required to be included in gross income is referred to as global intangible low tax income ("GILTI") and is defined under IRC Section 951A as the excess of the shareholder's net CFC tested income over the net deemed tangible income return. The GILTI inclusion amount has been absorbed by net operating losses. The Company has made a policy decision to record GILTI tax as a current-period expense when incurred.

The Tax Act also enacted the Base Erosion and Anti-Abuse Tax ("BEAT"). The BEAT minimum tax under IRC Section 59A is applicable to the extent that the BEAT tax amount is greater than the regular corporate tax for a given year. This tax is applicable to companies with prior 3-year average annual gross receipts exceeding \$500 million. The Company does not currently meet this threshold since its current average annual gross receipts is less than \$500 million.

The Company continues to permanently re-invest its \$45.2 million undistributed earnings of its foreign subsidiaries outside the U.S. Future repatriation of the Company's foreign earnings are subject to income tax withholdings. Any potential deferred tax liability would net with the Company's valuation allowance.

The aggregate changes in the balance of gross unrecognized tax benefits were as follows (in thousands):

	Years Ended June 30,		
	2020	2019	2018
<b>Balance at beginning of year</b>	\$ 16,280	\$ 15,299	\$ 15,819
Tax positions related to current year:			
Additions	954	934	823
Tax positions related to prior years:			
Additions	286	580	—
Reductions	(524)	(533)	(1,343)
<b>Balance at end of year</b>	<u>\$ 16,996</u>	<u>\$ 16,280</u>	<u>\$ 15,299</u>

The calculation of unrecognized tax benefits involves dealing with uncertainties in the application of complex global tax regulations. Management regularly assesses the Company's tax positions with respect to legislative, bilateral tax treaty, regulatory and judicial developments in the countries in which the Company does business. The reduction in prior year's tax positions primarily relates to lapses of applicable statutes of limitations. The Company anticipates that except for \$0.01 million in uncertain tax positions that may be reduced related to the lapse of various statutes of limitation, there will be no material changes in uncertain tax positions in the next 12 months. As of June 30, 2020, the amount of gross unrecognized tax benefits was \$17.0 million of which \$16.8 million would not affect income tax expense before consideration of any valuation allowance.

The Company's practice is to recognize interest and/or penalties related to income tax matters in income tax expense. As of June 30, 2020 and 2019, the Company had approximately \$0.01 million and \$0.06 million, respectively, of accrued interest and penalties related to uncertain tax positions.

The Company files income tax returns in the United States federal, various states and foreign jurisdictions. Due to tax attributes being carried forward and utilized during open years, the statute of limitations remains open for the U.S. federal jurisdiction and domestic states for tax years from 2000 and forward. The statutes of limitation with respect to the foreign jurisdictions where the Company files income tax returns vary from jurisdiction to jurisdiction and range from 3 to 10 years, and the material foreign jurisdictions are France, Switzerland, and Japan.

The Company is also subject to examination of its income tax returns by the Internal Revenue Service (IRS) and other foreign tax authorities, and in some cases the Company has received additional tax assessments which have not been significant.

#### Note 15. Employee Benefit Plan

The Company's employee savings and retirement plan is qualified under Section 401(k) of the United States Internal Revenue Code. Employees may make voluntary, tax-deferred contributions to the 401(k) Plan up to the statutorily prescribed annual limit. The Company makes discretionary matching contributions to the 401(k) Plan on behalf of employees up to the limit determined by the Board of Directors. The Company contributed \$2.0 million, \$2.1 million and \$2.2 million to the 401(k) Plan during the years ended June 30, 2020, 2019 and 2018, respectively.

#### Note 16. Defined Benefit Pension Obligation

The Company has established a defined benefit pension plan for its employees in its Switzerland subsidiary. The plan provides benefits to employees upon retirement, death or disability. The Company uses June 30 as the year-end measurement date for this plan. The unfunded liability of \$4.5 million was recognized in long-term other liabilities in the accompanying balance sheet as of June 30, 2020. Actuarial gain of \$0.6 million was recognized in other comprehensive loss in fiscal 2020.

#### Obligations and Funded Status

The following table presents the funded status of the defined benefit pension plan (in thousands):

	June 30,	
	2020	2019
<b>Change in benefit obligation:</b>		
Benefit obligation—beginning of fiscal year	\$ 17,577	\$ 14,254
Service cost	2,003	1,865
Interest cost	62	128
Plan participants' contributions	2,886	1,818
Plan amendment	975	—
Actuarial (gain)/loss	(615)	742
Foreign currency changes	545	250
Benefit and expense payments	(5,007)	(1,480)
Benefit obligation—end of fiscal year	<u>\$ 18,426</u>	<u>\$ 17,577</u>
<b>Change in plan assets:</b>		
Plan assets—beginning of fiscal year	\$ 14,228	\$ 12,192
Employer contributions	1,327	1,373
Actual return on plan assets	112	122
Plan participants' contributions	2,885	1,818
Foreign currency changes	413	203
Benefit and expense payments	(5,007)	(1,480)
Plan assets—end of fiscal year	<u>\$ 13,958</u>	<u>\$ 14,228</u>
Funded status	<u>\$ (4,468)</u>	<u>\$ (3,349)</u>
<b>Amounts recognized within the consolidated balance sheets:</b>		
Assets	\$ —	\$ —
Long-term other liabilities	(4,468)	(3,349)
Net amount recognized	<u>\$ (4,468)</u>	<u>\$ (3,349)</u>

The following table presents the amounts recognized in accumulated other comprehensive loss (before tax) for the defined benefit pension plan (in thousands):

	June 30,	
	2020	2019
Net loss	\$ (1,000)	\$ (144)
Total recognized in other comprehensive income (loss)	(236)	(856)
Accumulated other comprehensive loss	<u>\$ (1,236)</u>	<u>\$ (1,000)</u>

The following table presents the projected benefit obligation, accumulated benefit obligation and fair value of plan assets for this defined benefit pension plan where accumulated benefit obligation exceeded the fair value of plan assets (in thousands):

	June 30,	
	2020	2019
Projected benefit obligation	\$ 18,426	\$ 17,577
Accumulated benefit obligation	\$ 16,175	\$ 15,506
Fair value of plan assets	\$ 13,958	\$ 14,228

*Components of Net Periodic Benefit Cost and Other Amounts Recognized in Other Comprehensive Loss*

The following table shows the components of the Company's net periodic benefit costs and the other amounts recognized in other comprehensive loss, before tax, related to the Company's defined benefit pension plan (in thousands):

	Year ended June 30,		
	2020	2019	2018
<b>Net Periodic Benefit Costs:</b>			
Service cost	\$ 2,003	\$ 1,865	\$ 1,887
Interest cost	62	128	97
Expected returns on assets	(151)	(170)	(156)
Amortization of prior service cost	(2)	(55)	(44)
Amortization of net loss	—	—	11
Settlement charges	178	—	—
Net periodic benefit costs	<u>2,090</u>	<u>1,768</u>	<u>1,795</u>
<b>Other Amounts Recognized in Other Comprehensive Loss:</b>			
Net (gain) loss arising during the year	(593)	801	(901)
Prior service cost	2	—	(105)
Amortization of prior service cost	1,005	55	44
Amortization of net gain	—	—	(11)
Effect of settlement	(178)	—	—
Total recognized in other comprehensive (gain) loss	<u>236</u>	<u>856</u>	<u>(973)</u>
Total recognized in net periodic benefit costs and other comprehensive loss	<u>\$ 2,326</u>	<u>\$ 2,624</u>	<u>\$ 822</u>

The amounts in accumulated other comprehensive loss that are expected to be recognized as components of net periodic benefit cost during fiscal year 2021 related to the Company's defined benefit pension plan are as follows (in thousands):

	2021
Net loss	\$ 852
Prior service credit	506
Accumulated other comprehensive loss	<u>\$ 1,358</u>

### Assumptions

The assumptions used to determine net periodic benefit cost and to compute the expected long-term return on assets for the Company's defined benefit pension plan were as follows:

	Fiscal Years		
	2020	2019	2018
<b>Net Periodic Benefit Costs:</b>			
Discount rate	0.25%	0.45%	0.90%
Rate of compensation increase	1.50%	1.50%	1.50%
Expected long-term return on assets	1.00%	1.20%	1.40%

The assumptions used to measure the benefit obligation for the Company's defined benefit pension plan were as follows:

	June 30,	
	2020	2019
<b>Benefit Obligation:</b>		
Discount rate	0.25%	0.45%
Rate of compensation increase	1.50%	1.50%

### Estimated Contributions and Future Benefit Payments

The Company made contributions of approximately \$1.3 million, \$1.4 million and \$1.3 million to the defined benefit pension plan during fiscal years 2020, 2019 and 2018 respectively. The Company expects total contributions to the defined benefit pension plan for fiscal year 2021 will be approximately \$1.1 million.

Estimated future benefit payments expected to be paid by the defined benefit pension plan at June 30, 2020 are as follows (in thousands):

Year Ending June 30,	Future Benefits
2021	\$ 2,344
2022	816
2023	746
2024	688
2025	763
Thereafter	3,189
Total	<u>\$ 8,546</u>

### Plan Assets

The plan assets are invested in insurance contracts with Copré Collective Foundation based in Lausanne, Switzerland and Swiss Life Foundation BVG (BVG) insurance company based in Zurich, Switzerland at the end of fiscal year 2020 and 2019, respectively. In fiscal 2020, the risks of death and disability are reinsured with Zurich Life Insurance. The Copré Foundation for Occupational Benefits defines and is responsible for the asset strategy and invests the plan assets for the Company. In 2020, the guaranteed interest rate for mandatory retirement savings is 1.00%. The technical administration and management of the savings account are guaranteed by the Copré Foundation for Occupational Benefits. Insurance benefits due are paid directly to the entitled persons by the Copré Foundation for Occupational Benefits. Accuray International Sàrl has committed itself to pay the annual contributions and costs due under the pension fund regulations.

The contract of affiliation between the Company and the Copré Collective Foundation can be terminated by either side. In the event of a termination, recipients of retirement and survivors' benefits would remain with the collective foundation. The Company commits itself to transfer its active insured members and recipients of disability benefits to the new employee benefits institution, thus releasing the Copré Collective Foundation from all obligations.

#### Note 17. Segment Disclosure

The Company has one operating and reporting segment (oncology systems group), which develops, manufactures and markets proprietary medical devices used in radiation therapy for the treatment of cancer patients. The Company's Chief Executive Officer, its Chief Operating Decision Maker, reviews financial information presented on a consolidated basis for purposes of making operating decisions and assessing financial performance. The Company does not assess the performance of its individual product lines on measures of profit or loss, or asset based metrics. Therefore, the information below is presented only for revenues and long-lived tangible assets by geographic areas.

Revenues attributed to a country or region is based on the shipping addresses of the Company's customers. The following summarizes revenue by geographic region (in thousands):

	Years ended June 30,		
	2020	2019	2018
Americas	\$ 128,562	\$ 135,683	\$ 145,689
Europe, Middle East, India and Africa	119,989	149,095	120,032
Asia Pacific (excluding Japan and India)	61,689	63,793	72,925
Japan	72,688	70,214	66,251
Total	<u>\$ 382,928</u>	<u>\$ 418,785</u>	<u>\$ 404,897</u>

Information regarding geographic areas in which the Company has long-lived tangible assets is as follows (in thousands):

	June 30, 2020	June 30, 2019
Americas	\$ 12,807	\$ 13,853
Europe, Middle East, India and Africa	373	575
Asia Pacific (excluding Japan and India)	986	1,419
Japan	1,183	1,275
Total	<u>\$ 15,349</u>	<u>\$ 17,122</u>

#### Note 18. Restructuring Charges

On May 27, 2020, the Company informed affected employees of a cost saving initiative designed to reduce operating costs through the elimination of approximately 3 percent of its global workforce. These restructuring charges of \$1.1 million were recorded in cost of goods sold and operating expenses in the consolidated statements of operations, of which \$0.5 million was paid during fiscal 2020 and \$0.6 million is accrued in the consolidated balance sheet as of June 30, 2020.

In October 2018, the Company informed affected employees of a cost savings initiative designed to reduce operating costs through the elimination of approximately 5 percent of its global workforce. These restructuring charges of \$1.5 million were recorded in cost of goods sold and operating expenses in the consolidated statements of operations, of which \$1.0 million was paid during fiscal 2019 and \$0.5 million is accrued in the consolidated balance sheet as of June 30, 2019, the remainder was paid in fiscal year 2020.

The Company incurred no restructuring charges for the year ended June 30, 2018.

## Note 19. Subsequent Events

On July 3, 2020 the Company further amended the Amended Credit Agreement and Term Loan Agreement which, among other things modified certain financial covenants related to the Fixed Charge Coverage Ratio, minimum consolidated Net Revenue and minimum consolidated cash balance. Other significant terms remained unchanged. In addition, the Company agreed to prepay \$10.0 million in principal with respect to the Term Loan as well as an amendment fee of \$0.5 million, both of which were paid on July 3, 2020.

## Note 20. Quarterly Financial Data (unaudited)

The following table provides the selected quarterly financial data for fiscal 2020 and 2019 (in thousands, except net income (loss) per share amounts):

	Quarters ended			
	September 30, 2019	December 31, 2019	March 31, 2020	June 30, 2020
Net revenue	\$ 89,577	\$ 98,826	\$ 99,548	\$ 94,977
Gross profit	\$ 32,943	\$ 37,900	\$ 39,133	\$ 39,745
Net Income (loss)	\$ (9,356)	\$ 10,710	\$ 2,625	\$ (152)
Net income (loss) per share - basic	\$ (0.11)	\$ 0.12	\$ 0.03	\$ (0.00)
Net income (loss) per share - diluted	\$ (0.11)	\$ 0.12	\$ 0.03	\$ (0.00)
Weighted average common shares used in computing net income (loss) per share:				
Basic	88,772	89,517	90,476	90,748
Diluted	88,772	90,279	90,855	90,748

	Quarters ended			
	September 30, 2018	December 31, 2018	March 31, 2019	June 30, 2019
Net revenue	\$ 95,829	\$ 102,318	\$ 103,221	\$ 117,417
Gross profit	\$ 37,879	\$ 38,380	\$ 40,466	\$ 45,926
Net income loss	\$ (9,206)	\$ (4,640)	\$ (1,184)	\$ (1,400)
Net loss per share—basic and diluted	\$ (0.11)	\$ (0.05)	\$ (0.01)	\$ (0.02)
Shares used in basic and diluted per share calculation	86,479	87,237	87,962	88,202

## **Item 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE**

None.

### **Item 9A. CONTROLS AND PROCEDURES**

#### **(a) Evaluation of Disclosure Controls and Procedures**

Our management, with the participation of our Chief Executive Officer and Chief Financial Officer, evaluated the effectiveness of the design and operation of our disclosure controls and procedures (as defined in Rule 13a-15(e) of the Exchange Act) as of June 30, 2020.

Based on this evaluation, our Chief Executive Officer and Chief Financial Officer concluded that as of the end of the period covered by our Annual Report on Form 10-K, our disclosure controls and procedures were effective to provide reasonable assurance that the information required to be disclosed by us in the reports we file or submit under the Exchange Act is recorded, processed, summarized, and reported within the time periods specified in the SEC's rules and forms, and that such information is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure.

#### **(b) Management's Report on Internal Control over Financial Reporting**

Management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Rule 13a-15(f) of the Exchange Act. Under the supervision and with the participation of the Chief Executive Officer and Chief Financial Officer, management conducted an evaluation of the effectiveness of our internal control over financial reporting based upon the guidelines established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission ("COSO") 2013.

Based on this evaluation, management concluded that our internal control over financial reporting was effective as of June 30, 2020.

The effectiveness of our internal control over financial reporting as of June 30, 2020 has been audited by Grant Thornton LLP, an independent registered public accounting firm, as stated in their report included herein.

#### **(c) Changes in Internal Control over Financial Reporting**

Our management, with the participation of our Chief Executive Officer and Chief Financial Officer, has evaluated any changes in our internal control over financial reporting that occurred during the quarter ended June 30, 2020, and has concluded that there was no change during such quarter that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

#### *Inherent Limitations of Internal Controls*

Internal control over financial reporting cannot provide absolute assurance of achieving financial reporting objectives because of its inherent limitations. Internal control over financial reporting is a process that involves human diligence and compliance and is subject to lapses in judgment and breakdowns resulting from human failures. Internal control over financial reporting also can be circumvented by collusion or improper management override. Because of such limitations, there is a risk that material misstatements may not be prevented or detected on a timely basis by internal control over financial reporting. However, these inherent limitations are known features of the financial reporting process. Therefore, it is possible to design into the process safeguards to reduce, though not eliminate, this risk.

**Item 9B. OTHER INFORMATION**

On August 13, 2020, the Company issued an earnings release reporting our financial and operating results for the fourth quarter and full year ended June 30, 2020, which earnings release was furnished to the SEC as Exhibit 99.1 to our Current Report on Form 8-K. The earnings released reported net income of \$3.2 million for the full year and a loss of \$823 thousand for the fourth quarter ended June 30, 2020. Subsequent to August 13, 2020, the Company received a \$1 million payment from a customer whose accounts receivable were fully reserved as of June 30, 2020. This event impacted the assessment of allowance for doubtful accounts made at the time of the earnings release and management decided to reverse an equivalent amount of allowance previously provided at June 30, 2020. Separately, management found other de minimis adjustments which increased cost of goods sold and general and administrative expenses by \$151 thousand and \$178 thousand, respectively, for the full year and the fourth quarter ended June 30, 2020. The total impact of adjustments increased the net income reported in the earnings release from \$3.2 million to \$3.8 million for the full year ended June 30, 2020 and decreased the loss from \$823 thousand to \$152 thousands for the fourth quarter ended June 30, 2020. The reduction in allowance for doubtful accounts also increased the Company's accounts receivable balance as of June 30, 2020 by \$1 million. We do not believe any of the impacts discussed are material to our financial statements or operating results furnished in the earnings release.

## REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

Board of Directors and Stockholders  
Accuray Incorporated

### **Opinion on internal control over financial reporting**

We have audited the internal control over financial reporting of Accuray Incorporated (a Delaware corporation) and subsidiaries (the “Company”) as of June 30, 2020, based on criteria established in the 2013 *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (“COSO”). In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of June 30, 2020, based on criteria established in the 2013 *Internal Control—Integrated Framework* issued by COSO.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) (“PCAOB”), the consolidated financial statements of the Company as of and for the year ended June 30, 2020, and our report dated August 25, 2020 expressed an unqualified opinion on those financial statements.

### **Basis for opinion**

The Company’s management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management’s Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company’s internal control over financial reporting based on our audit. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audit in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

### **Definition and limitations of internal control over financial reporting**

A company’s internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company’s internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company’s assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

## PART III

### **Item 10. DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE**

#### **Directors, Executive Officers and Corporate Governance**

The information in our 2020 Proxy Statement regarding directors and executive officers appearing under the headings “Proposal One—Election of Directors,” “Executive Officers” and “Delinquent Section 16(a) Reports” is incorporated herein by reference.

In addition, the information in our 2020 Proxy Statement regarding the director nomination process, the Audit Committee financial expert and the identification of the Audit Committee members appearing under the heading “Corporate Governance and Board of Directors Matters” is incorporated herein by reference.

There have been no material changes to the procedures by which stockholders may recommend nominees to our Board of Directors.

#### **Code of Conduct and Ethics**

We have adopted a Code of Conduct and Ethics that applies to all employees including our principal executive officer and principal financial officer. The full texts of our codes of business conduct and ethics are posted on our website at [www.accuray.com](http://www accuray.com) under the Investor Relations section. We intend to disclose future amendments to certain provisions of our codes, or waivers of such provisions granted to executive officers and directors, on our website within four business days following the date of such amendment or waiver. The inclusion of our web site address in this report does not include or incorporate by reference the information on our web site into this report.

### **Item 11. EXECUTIVE COMPENSATION**

The information in our 2020 Proxy Statement appearing under the headings “Executive Compensation,” “Compensation Committee Report,” “Compensation Discussion and Analysis,” “Compensation of Non-Employee Directors” and “Corporate Governance and Board of Directors Matters—Compensation Committee Interlocks and Insider Participation” is incorporated herein by reference.

### **Item 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS**

The information in our 2020 Proxy Statement appearing under the heading “Security Ownership of Certain Beneficial Owners and Management” and “Equity Compensation Plan Information” is incorporated herein by reference.

### **Item 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS, AND DIRECTOR INDEPENDENCE**

The information in our 2020 Proxy Statement appearing under the headings “Certain Relationships and Related Transactions” and “Corporate Governance and Board of Directors Matters—Director Independence” is incorporated herein by reference.

### **Item 14. PRINCIPAL ACCOUNTING FEES AND SERVICES**

The information in our 2020 Proxy Statement appearing under the headings “Proposal Five—Ratification of Appointment of Independent Registered Public Accounting Firm—Audit and Non-Audit Services” and “Proposal Five—Ratification of Appointment of Independent Registered Public Accounting Firm—Audit Committee Pre-Approval Policies and Procedures” is incorporated herein by reference.

**PART IV**

**Item 15. EXHIBITS AND FINANCIAL STATEMENT SCHEDULES**

(a) We have filed the following documents as part of this report:

**1. Consolidated Financial Statements** (as set forth in Item 8)

	<u>Page No.</u>
Report of Independent Registered Public Accounting Firm .....	88
Consolidated Balance Sheets .....	89
Consolidated Statements of Operations and Comprehensive Income (Loss) .....	90
Consolidated Statements of Stockholders' Equity .....	91
Consolidated Statements of Cash Flows.....	92
Notes to Consolidated Financial Statements.....	93

**2. Consolidated Financial Statement Schedules**

All financial statement schedules have been omitted, since the required information is not applicable or is not present in amounts sufficient to require submission of the schedule, or because the information required is included in the consolidated financial statements and notes thereto included in this Annual Report on Form 10-K.

**Important Safety Information:**

Most side effects of radiotherapy, including radiotherapy delivered with Accuray systems, are mild and temporary, often involving fatigue, nausea, and skin irritation. Side effects can be severe, however, leading to pain, alterations in normal body functions (for example, urinary or salivary function), deterioration of quality of life, permanent injury and even death. Side effects can occur during or shortly after radiation treatment or in the months and years following radiation. The nature and severity of side effects depend on many factors, including the size and location of the treated tumor, the treatment technique (for example, the radiation dose), the patient's general medical condition, to name a few. For more details about the side effects of your radiation therapy, and to see if treatment with an Accuray product is right for you, ask your doctor.
